

Proposed Sprint 2 Core MVP Requirements Acceptance Criteria and Remaining Decision Register

1. Core MVP definition

Sprint 2 will prove one representative reusable learner/course journey in the new OAPA Academy development environment:

Course Home; Module 1 + Workshop; Module 2 + Workshop; Module 3 + Workshop; Assessment; Completion and reporting.

Prepared placeholders and representative activities will demonstrate learner progression and content expert reuse. The full course catalogue and OAPA specification are not Sprint 2 scope.

The criteria follow Sprint 1 validation and the latest plan's A1-A10 baseline, using the confirmed requirements.

2. Proposed scope boundaries

Treatment	Scope
Sprint 2 inclusions	One reusable course framework; Course Home; three modules and associated workshop areas; sequential completion; two-of-three workshop eligibility; representative formative-to-final assessment; learner progress and practical staff reporting; one reusable self-check pattern; content replacement and documented admin duplication route.
Sprint 2 quality checks	Navigation and signposting, supported OAPA visual treatment, representative device/accessibility checks, Teacher/learner testing and independent developer cross-testing. Correct defects affecting the selected journey.
Sprint 3 refinement	Remaining agreed usability, accessibility, compatibility and documentation refinements; feedback changes and secondary improvements. A failed essential Sprint 2 criterion is not automatically deferred.
Later or scope decision required	Full programme/category rollout, cohort/programme reporting and export, broader enrolment workflows, full peer review, editorial workflow and alternative course templates. Retain confirmed obligations in the backlog; peer review Sprint 2 scope is decided under D-06.

Treatment	Scope
Not committed	H5P, a specific plugin or conferencing product, custom plugins, major theme/backend work, changes to the old Academy, full catalogue creation or academic content authoring. Optional technology requires a confirmed need and approval.

3. Access and acceptance rules

Teacher access covers course-level configuration; OAPA retains site administration and duplication. All criteria require real Academy evidence. POCs and mock-ups are supporting evidence only; Teacher preview does not prove persisted learner attempts or completion.

4. Proposed acceptance criteria

AC-01 – AC-10 correspond to the PM’s ‘Sprint 2 Core MVP Implementation Plan’. Each row states the observable pass condition and any decision or access dependency. R, CT, FR, UX and NFR IDs refer to the previous Gap Analysis (Week 2), Course Template Requirements (week 2), and Initial Requirements (Week 1).

ID and trace	Pass condition and evidence	Verification dependency
AC-01 Reusable framework R2; CT-02/03/08	The selected Academy course contains Course Home, Modules 1-3, a workshop area associated with each module and a separate Assessment area. Each module has defined resource, self-check/activity and peer exchange locations. A Teacher can replace representative placeholder content without recreating the sections. Evidence: course structure and edited placeholders.	Teacher-level Academy verification. D-01 selects the course and confirms scope.
AC-02 Learner navigation R3; UX-01/02/03; CT-05	From Course Home, a learner can find the start point, current module, available sections and next required activity. After partial completion and re-entry, current progress and the next step remain clear. Restricted content explains its prerequisite. Evidence: first time and returning learner walkthrough consistent with the agreed UX.	Teacher/learner Academy verification. D-08 confirms the implementable UX handoff.
AC-03 Sequential progression R4; CT-04	With agreed Module 1 requirements incomplete, Module 2 is inaccessible, including via direct link. Completing those requirements unlocks Module 2; equivalent complete/incomplete behaviour works for Module 3. Completion persists after re-entry. Evidence: recorded learner results before and after each prerequisite. Reading completion alone is sufficient only if explicitly agreed.	Teacher configuration and learner execution in Academy. D-02 fixes the completion rules.

ID and trace	Pass condition and evidence	Verification dependency
AC-04 Workshops and eligibility R6-R8; CT-08-12	Each workshop area contains details, date/time, joining information, resources and recording access where applicable. A representative session is accessible from the course/calendar and displays the correct time for two learner time zones. Staff can record attendance. With module requirements satisfied, assessment remains blocked for 0/1 attendances and opens for any 2 of 3, or all 3; incomplete modules still block access. Evidence: joining/time checks and attendance/access results.	Academy verification; D-03 confirms delivery, recording and attendance mechanism. OAPA action may be needed for integration. A documented dependency remains Open, not Pass.
AC-05 Representative assessment R9/R10; FR-07; CT-13/14	One assessment supports: formative submission by the soft deadline and feedback without a summative grade; revision and final submission by the hard deadline; and direct final submission without using the soft deadline. Staff apply criteria/rubric marking, release the summative result at the agreed stage and grant a test learner an individual extension. Submission, feedback and final states are visible to the appropriate role. Evidence: learner and staff results for both routes and the extension.	Teacher/learner Academy verification. D-04 confirms dates, mechanism and grade-release rules.
AC-06 Progress and reporting R12; UX-04; FR-11; CT-05	A learner can see activity completion and overall course progress. The agreed course-level staff report identifies each test learner and the selected completion, submission or attempt state. After a learner completes the representative activity, learner and staff views reflect the same state and retain it after re-entry. Evidence: matched learner/report records. Broader reporting/export is not assumed.	Teacher/report and learner verification in Academy. D-05 confirms the minimum report fields and audience.
AC-07 Reusable activity R5; CT-06/07	At least one reusable self-check completes end-to-end, provides feedback for correct and incorrect responses, and records attempts/completion under the agreed rule. A Teacher copies it to another module and changes its content without rebuilding the module or breaking its completion/access settings. Evidence: original and copied activity results from an enrolled test learner.	Teacher and enrolled learner verification in Academy. D-07 selects the native activity or conditionally approved H5P.
AC-08 UX and practical accessibility R3/R13; UX-05/07; CT-16	The implemented Course Home, module, workshop and assessment path follows the agreed navigation and OAPA visual treatment within supported settings. Core controls have meaningful labels; completion is not conveyed by colour alone. The representative path is usable on desktop, tablet and mobile, by keyboard and in a basic screen-reader navigation check. Evidence: UX review and recorded checks with any remaining limitations.	Academy course/theme verification. D-08 confirms feasible treatment; exact site-level changes require OAPA action.

ID and trace	Pass condition and evidence	Verification dependency
AC-09 Integrated testing NFR-06; S2 A9	The representative journey is executed from entry to assessment and reporting, including incomplete and returning learner states. Each developer tests their work and independently checks the other's. Known Module 1 navigation, Module 2 prerequisite and workshop gating issues are corrected or explicitly shown not to apply to the new build. Evidence: expected/actual results, defect outcomes and independent retests.	Teacher and learner execution in Academy. Use an enrolled test learner for tracked attempts/completion; record environment and role.
AC-10 Content expert reuse R13; CT-01/15; NFR-05/07	A content expert replaces representative resources, activity content, workshop details and assessment instructions/dates without recreating the framework or breaking progression. The OAPA admin course duplication process and responsibility are documented, including preservation of the master and manual updates to existing copies. Evidence: replacement walkthrough and duplication instructions; capture an Academy copy demonstration when OAPA access/action is provided.	Teacher workflow requires Academy verification. Duplication is OAPA-admin dependent under D-09; an unexecuted copy remains an explicit verification gap.

5. Remaining decision register

ID and decision	Confirmation needed before affected work is locked	Owner and timing
D-01 Scope and playback feedback AC-01; all criteria	Confirm the representative course, selected content/activity examples and any client/supervisor playback changes. S2 records playback as completed; confirm that this proposal reflects the accepted feedback. Record approved scope and explicit exclusions.	BA/PM with client and supervisor; before scope lock.
D-02 Completion definition AC-03/04/07	Specify which resources/activities complete each module and whether a self-check requires viewing, completion or a pass. Resolve the reading only POC assumption and separate module completion from workshop eligibility.	BA + client; developers verify before restrictions are configured.
D-03 Workshop delivery and attendance AC-04	Confirm conferencing platform/streams, attendance recording responsibility, timezone/calendar behaviour, recording access and any approved exceptions. Determine breakout/notification arrangements for the representative session and whether specific OAPA-side configuration is required.	Client + developers; PM raises admin needs before workshop/assessment integration.
D-04 Assessment mechanism AC-05	Confirm the practical soft/hard deadline configuration, formative feedback, revision/direct-final routes, marking criteria, grade release and individual extension handling. Technical choice must preserve the confirmed workflow.	BA + client; Dev 1 verifies before assessment configuration is finalised.

ID and decision	Confirmation needed before affected work is locked	Owner and timing
D-05 Practical reporting AC-06	Agree report audience and minimum fields for the representative course. Confirm whether any export is required in Sprint 2; programme/cohort aggregation and export are retained requirements but are not automatically included.	BA + client; Dev 2 verifies report access before reporting scope is locked.
D-06 Peer review and future scope	Confirm whether any structured peer review is included in the representative journey. If selected, define allocation, identity and grading behaviour and add an explicit criterion. Otherwise record later scope, including broader reporting/enrolment, editorial workflow and alternative templates.	BA/PM + client/supervisor; before scope lock. No automatic Sprint 2 commitment.
D-07 Activity choice AC-07	Use a Moodle native self-check unless H5P is selected and the reported Academy invalid contextid issue is resolved. Confirm completion/attempt behaviour on the chosen activity. H5P remains optional and is not a summative assessment commitment.	Dev 2 + BA/client for suitability; OAPA technical only if needed, before activity build.
D-08 UX and theme feasibility AC-02/08	Confirm Moodle-ready navigation, completion cues and current Brand Book treatment. Identify supported course-level options and any exact site-level change; record agreed alternatives rather than assume custom theme development.	UX + developers; client confirms visual choices, before UX build is locked.
D-09 Admin duplication and test access AC-09/10	Confirm the OAPA admin duplication route, who performs it and when copy verification can occur. Confirm an enrolled learner account for persisted tracking tests. Existing Teacher access is not a blanket access blocker.	Developers + OAPA technical; PM coordinates before reuse/tracking acceptance.
