Card Task 88 Document the final Moodle architecture, local restore/reproduction process, configuration and technical continuation steps

By: Reshan Lahandapura (Dev 1)

Documentation Creation Date: 26/10/2026

Site: My own shared LOCAL Moodle

Technical Architecture

The following local moodle was set up on version 5.3+

In order for the environment to be set up, we had to set up an application that could host local webservers so something like XAMPP or Docker would work. We had to enable the following extentensions in php.ini located in the php file

- extension=mysqli
- extension=mbstring
- extension=fileinfo
- extension=gd
- extension=intl
- extension=zip
- extension=sodium
- extension=openssl
- extension=curl

Next we had to install maria db 11.4 version or higher as well as php with version 8.3 or higher

Next with those set up we run the application to run the local web server which from there we access the install.php page and follow steps on a webpage onlike to set up the moodle. For a visual guide to set up the moodle it can be found on the guide on the following link:

Local-Moodle/LOCAL MOODLE SET UP GUIDE.pdf at main · S4090860/Local-Moodle

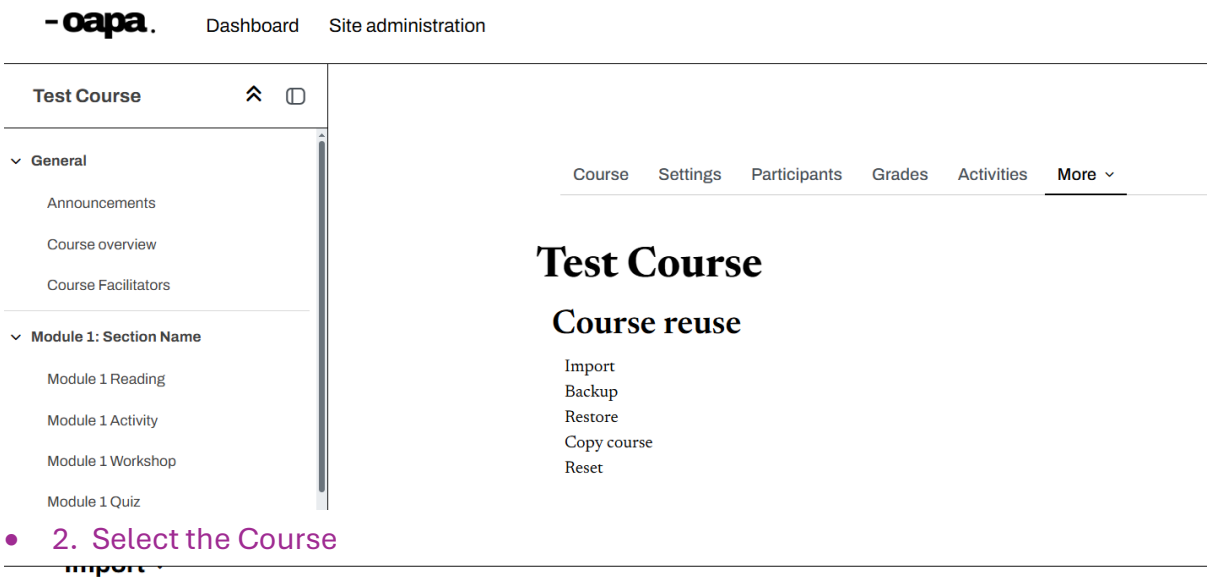

The System users are the admins, teachers, course creators and students.

Dependencies

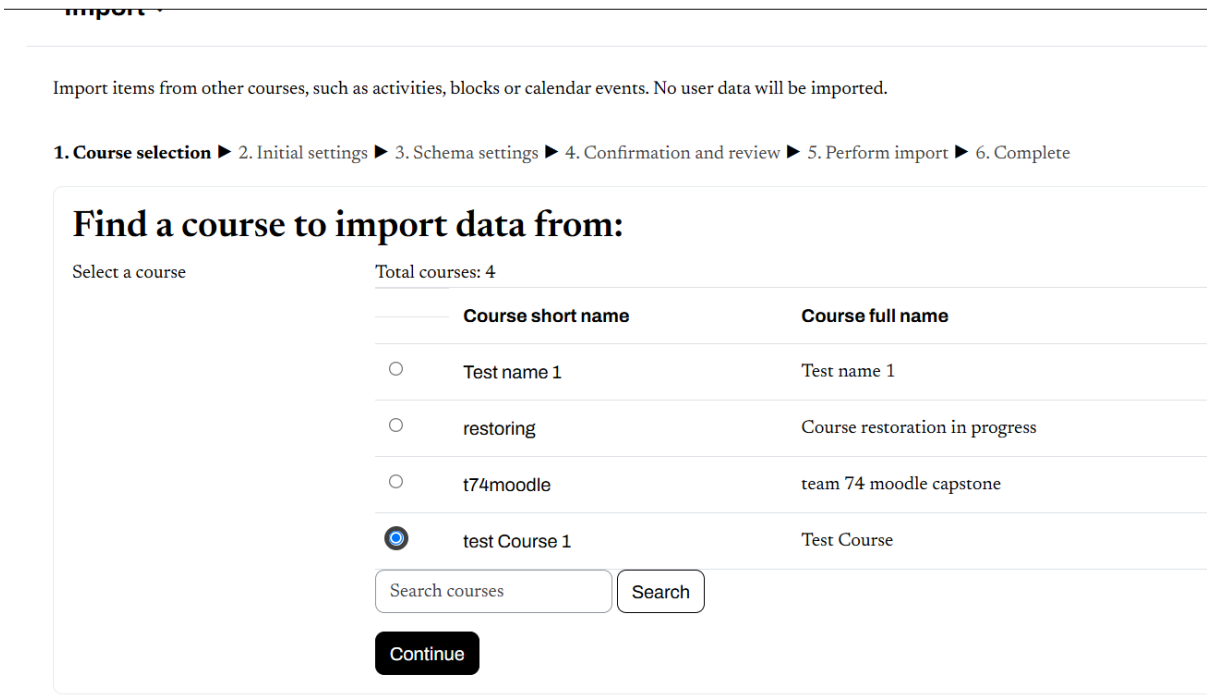

- MariaDB 11.4 or higher
- PHP Version 8.3 or higher
- Application that hosts local web servers
- Attendance plug in for moddle

Steps for restoring/reproduction of course

- 1. Go to the more options

- 2. Select the Course

- 3. make sure the page has the following like this:

1. Course selection ▶ **2. Initial settings** ▶ 3. Schema settings ▶ 4. Confirmation and review ▶ 5. Perform import ▶ 6. Complete
