

Sprint 2 Core MVP Build and Test Acceptance Checklist

This reference converts AC-01 – AC-10 from Task 24 into build/test checks for a reusable Academy course. It refers to:

- Proposed Sprint 2 Core MVP Requirements, Acceptance Criteria and Remaining Decision Register;
- Sprint 2 Core MVP Implementation Plan;
- Reusable OAPA Course Template Requirements and Acceptance Criteria;
- Sprint 1 validation and independent test reports;
- course-template configuration guide; and
- client meetings.

1. Course structure and learner experience

Check and AC	Test with expected result
STR-01 – 02 AC-01	Inspect Course Home → Modules 1 – 3 with associated Workshops 1 – 3 → separate Assessment. Pass: the order is correct and every module has consistent locations for resources, activities/self-checks and workshop information. Any peer-review or peer-exchange component is included only where confirmed under D-06.
NAV-01 – 02 AC-02	Enter as a new learner and follow the course links. Pass: Course Home explains the purpose, journey, workshops and Module 1 start point; links reach the intended locations; current module, next activity, return route and prerequisites for locked content are clear.
NAV-03 AC-02	Partly complete a module, sign out and return. Pass: saved progress, available/restricted stages and the next required step remain clear without repeating completed work.
UX-01 – 03 AC-08	Compare the core journey with the agreed UX/Brand Book. Check desktop, tablet, mobile, keyboard-only use and basic screen-reader navigation. Pass: supported branding/navigation is consistent; essential content and controls are readable and operable; controls are labelled, focus is identifiable and completion/restrictions don't rely on colour alone. Record device/browser and assistive technology. Unagreed alternatives or site-level gaps remain Open under D-08.

Note from meeting: preserve brand alignment while exploring relevant imagery.

2. Progression and workshops

Check and AC	Test with expected result
PRO-01 – 03 AC-03	For both Module 1 → 2 and Module 2 → 3, leave each required prerequisite incomplete in turn and try navigation plus direct section/activity links. Pass: the next module stays blocked until all agreed requirements are complete, then unlocks; completing Module 1 alone doesn't unlock Module 3. Check that no prerequisite incorrectly requires "incomplete". Reading alone is sufficient only if agreed.
PRO-04 AC-03	Refresh and re-enter after each unlock; compare with a fresh learner. Pass: completion/access persist for the same learner and don't unlock another learner's course.
WS-01 – 02 AC-04	Inspect all three workshop areas and follow representative joining/resource/recording links. Pass: each has the correct module placement, details, date/time/time zone, joining information, resources and recordings where applicable. Open one session from course and calendar under two learner time zones; both must show the same session at the correct local time/date and lead to the correct stream.
WS-03 AC-04	Authorised staff record attendance and reload it. Pass: the correct learner/session record persists and drives eligibility. Opening a joining link or recording is not attendance unless explicitly agreed.
WS-04 AC-04	Test every eligibility case below through navigation and a direct Assessment link. Pass: access requires all agreed module requirements complete AND attendance at any two of three workshops. Attendance is separate from module completion; don't add attendance at every workshop as a module-unlock condition.

Cases	Module requirements	Attendance subcases	Expected access
G-01 – 04	All complete	None; W1 only; W2 only; W3 only	Blocked in all four
G-05 – 08	All complete	W1 + W2; W1 + W3; W2 + W3; all three	Allowed in all four
G-09 – 11	M1, M2 or M3 requirement unmet, tested separately	Any two, then all three, for each module case	Blocked in every case

3. Assessment and learner tracking

Check and AC	Test with expected result
ASM-01 AC-05	Inspect the assessment as learner and Teacher. Pass: instructions, submission requirements, criteria/rubric, soft/hard deadlines and time zone match D-04; the optional formative route and direct-final route are understandable.
ASM-02 – 03 AC-05	Learner A submits by the soft deadline, receives staff feedback, revises and submits finally by the hard deadline. Pass: staff can retrieve both stages, the correct learner can see feedback and clear submission states, formative feedback carries no summative grade, and the revision route works.
ASM-04 AC-05	Learner B skips the formative stage and submits by the hard deadline. Pass: no draft/feedback step is required and staff can identify and mark the final work.
ASM-05 AC-05	Mark final work against the agreed criteria/rubric and check learner visibility before/after release. Pass: the result matches marking, stays withheld until the agreed release stage and then appears to the correct learner, distinct from formative feedback.
ASM-06 AC-05	Give Learner C an individual extension and compare with an unextended learner around original/extended deadlines. Pass: C can submit within the extension; the other deadline stays unchanged; after-deadline behaviour matches D-04.
TRK-01 – 02 AC-06	Compare learner activity/module completion and overall progress before completion, after the approved trigger and after re-entry. Compare incomplete and completed learners in the intended staff report. Pass: progress persists, the next stage is clear, each learner and all agreed report fields are present, and completion/submission/attempt states agree after the agreed update interval.
TRK-03 AC-06	Follow one learner through module completion, workshop eligibility, final assessment and the agreed course-completion event. Pass: overall completion appears only when its conditions are met; final learner/staff states agree and persist. Eligibility, submission, grade release and course completion are separate events unless explicitly agreed.

4. Activities, reuse and integrated testing

Check and AC	Test with expected result
ACT-01 AC-07	Complete the chosen self-check with correct and incorrect responses. Pass: both receive appropriate feedback; labelled navigation reaches the end; attempts, completion and any retry/pass threshold follow D-02/D-07.
ACT-02 – 03 AC-07	Copy the activity to another module, change content/feedback and test both as an enrolled learner. Pass: the original is unchanged; the copy uses new content and correct local prerequisites; no module rebuild is needed. Each activity's attempts/completion match staff records and persist after re-entry; an unattempted copy is not already complete.
STR-03; REU-01 – 02 AC-01/10	A Teacher/content expert replaces a resource, activity content/feedback, workshop details and assessment instructions/dates. Pass: replacements work without rebuilding sections/navigation/progression. Re-test affected navigation, activities and module/assessment restrictions; links and rules must reference the intended replacement content.
REU-03 AC-10	Review the reuse instructions with the responsible role. Pass: they identify the master, OAPA duplication owner and supported Academy steps, naming/setup, content/date replacement, restriction review and pre-publication checks. Existing copies require manual updates after master changes; MoodleCloud import steps aren't automatically Academy-verified.
REU-04 AC-10	When OAPA provides the copy action/access, duplicate into a separate test course. Pass: the master is unchanged; course structure, links and restrictions work in the copy, with no unintended duplicate announcements. Re-test affected progression, eligibility and activity checks. Unexecuted duplication remains Open even if the instructions pass.
INT-01 – 03 AC-09	Run the full Academy journey through assessment and reporting, including incomplete/returning learners and both assessment routes. Pass: linked evidence covers the journey; both developers complete own testing and independent cross-testing; fixes are independently retested. Verify the Sprint 1 Module 1 navigation, reversed Module 2 prerequisite and missing workshop-gate risks are fixed or demonstrably inapplicable, with replacement behaviour tested.

5. Unresolved decisions and acceptance

Decision and affected criteria	Confirmation or validation required	Owner
D-01 Scope All ACs	Approved baseline reference, representative course/content and playback changes.	BA/PM + client/supervisor
D-02 Completion AC-03/04/06/07	Required items and exact module/activity completion triggers; self-check threshold if any; overall course-completion event.	BA + client; developers validate
D-03 Workshops AC-04	Platform/streams, attendance responsibility/mechanism, calendar/time zones, recordings, exceptions and any selected breakout/notification behaviour; exact OAPA action if required.	Client + developers; PM coordinates OAPA
D-04 Assessment AC-05/06	Soft/hard deadlines and mechanism, revisions/direct-final route, marking and grade release, extensions and after-deadline behaviour.	BA + client; development for technical validation
D-05 Reporting AC-06	Staff audience, report/view, minimum fields, update behaviour and whether export is included.	BA + client; development for technical validation
D-06 Future scope AC-01 and scope	Whether structured peer review is included. If selected, define allocation, identity and grading and add approved checks; otherwise retain later scope.	BA/PM + client/supervisor
D-07 Activity AC-07	Native activity or conditional H5P; attempt/completion behaviour and, if selected, H5P technical validation.	Dev 2 + BA/client
D-08 UX AC-02/08	Approved UX/brand version, feasible course-level treatment, agreed alternatives and any exact site/theme request.	UX + developers; client confirms
D-09 Access and duplication AC-09/10; tracked checks	Enrolled test learners and staff report access; OAPA duplication owner/route and copy demonstration.	Developers + OAPA technical; PM coordinates

- Pass means the agreed behaviour is demonstrated;
- Fail means testing shows it is not met;
- Open means a required decision, access or validation remains outstanding.
