

Accessibility and Navigation Feasibility

Made by: Walaa Ghanduri, UX designer

Date: 26th of September 2026

Area	Finding	Fix – development (Teacher-level access)	Fix – Theme/Site level (requires OAPA support)
Course Home	Tab label “Teaching Team” is not the right signposting for the domain we are working in and the user demographic for OAPA	Rename to ‘Course Facilitators’.	-
Course Home	Secondary navigation order/placement: "Activities" tab is redundant and "Quizzes"/"Assignments" tabs are missing, reducing clarity of the learner journey.	-	Reposition secondary nav higher on the page; remove "Activities"; add "Quizzes" and "Assignments" tabs.
Course Home	Left-hand active-tab highlight uses blue, which is inconsistent with OAPA branding and may not meet contrast/heading-hierarchy expectations.	-	Update active-state colour from blue to black per OAPA theme.
Course Home	Duplicate navigation appears in the main content area, competing with the left panel and creating two sources of truth for "where am I".	-	Remove the middle-of-page navigation block; rely on left panel only.
Course Home	OAPA branding elements from the approved mock-ups are not yet reflected, weakening visual hierarchy and course identity.	-	Apply OAPA branding (logo, colour palette, header styling) to the course home template.

Course Home	Course landing tab, progress indicators, lock icon, course title and Announcements tab are implemented correctly and support clear signposting.	No action needed, confirmed working as intended.	-
Module Content	Module 1 is not unlocked by default on landing, delaying the learner's first action and breaking the expected entry point.	Set Module 1 to unlocked-by-default in course completion settings.	-
Module Content	Module 1's workshop tab remains locked even though its content is asynchronous, contradicting the "unlocked" state of the rest of the module.	Unlock all tabs within Module 1 (including workshop) once the module itself is unlocked	-
Module Content	Tab order within each module places the quiz before the workshop; learners are signposted to test knowledge before finishing all content.	Reorder tabs so Quiz is always the final item in each module (Content → Activity → Workshop → Quiz).	-
Module Content	Module headings (Module 1, 2, 3...) are visually similar to sub-section headings, which can flatten the heading hierarchy for screen-reader and low-vision users.	Confirm module titles use a distinct heading level from lesson/tab titles in course settings.	If the LMS applies heading styles via theme templates, adjust heading style hierarchy site wide.
Self-Checks & Completion Messaging	It is undecided whether progress indicators should be self-marked or auto-	Decide and document one completion rule (self-mark vs auto-detect) and apply	If auto-detect (scroll tracking) isn't natively supported, this requires an

	detected on scroll-to-bottom; the current mixed approach could confuse learners about what "green" means.	consistently across modules.	OAPA/platform-level feature.
Workshop	Module 4 unlocks only via manual facilitator confirmation of workshop attendance, but there is no learner-facing explanation of this requirement before the module is reached.	Add a short instructional note on the course home / Module 3 completion screen explaining the 2-of-3 workshop attendance requirement.	-
Assessment	"Module 4" (the assessment/final assignment module) is not clearly titled, so learners can't tell from the label alone that this is the final assessment stage.	Give Module 4 a clear, descriptive title (e.g. "Module 4: Final Assessment").	-
Assessment	Final Assignment is correctly shown as locked with an icon, but as above, carries no text explanation of the unlock condition.	Apply the same accessible locked-state labelling fix noted under Restricted Content.	-
