

Final Sprint 2 Workflow Requirements and Implementation Criteria

This document defines the remaining Core MVP workflow rules for the representative course: workshop attendance and assessment eligibility, optional formative feedback and revision, final submission, learner progress and staff reporting. Structured peer review is deferred outside this Core MVP unless separately approved.

Sprint 2 Week 2 work is closed and remains unchanged. Use these criteria to interpret the recorded build and plan the next permitted implementation or validation stage.

Confirmed rules come from the requirements register, acceptance checklist and 24 September client decisions [1-4]. Detailed criteria below translate those rules into observable behaviour. Where no client decision exists, a setting or proposed reporting detail is explicitly marked Pending confirmation. Neither the existing 75% setting nor the proposed 80% threshold is adopted as approved policy.

Workshop attendance rules

ID	Required behaviour	Implementation acceptance criterion
W01	Live workshops are associated with Modules 1-3 and delivered through MS Teams [3 pp2-5; 4 p3].	Each workshop area identifies its module, session date/time/time zone, joining link, supporting resources and recording access where applicable. Course/calendar links identify the same session.
W02	Attendance must be verifiable; learner self-completion is not attendance [1 p1; 3 pp3-4].	Only verified session attendance or an authorised exception counts toward the hurdle. Clicking a link, viewing a recording or pressing Done must not independently create qualifying attendance.
W03	Automated capture is preferred; manual exceptions remain available [3 pp3-5].	Use an OAPA-supported attendance source and an authorised facilitator exception route. Confirm the exact mechanism with OAPA. No particular plugin or custom integration is prescribed.
W04	Count distinct workshops instead of multiple attendance events.	Each learner can contribute at most one qualifying result per W1, W2 and W3. Rejoining a session must not count as attending a second workshop. Unverified status doesn't satisfy the gate.
W05	Attendance policy and record must be defensible.	Pending confirmation: duration rule, recorder and exception process. Proposed record: learner, workshop/session, attendance state, source, and for an exception its approver/date/reason. This records an approved exception separately from actual attendance.

Module progression and assessment eligibility

Separate module completion from attendance

The default journey is Course Home → Module 1 → Module 2 → Module 3 → separate Assessment. Facilitators may configure progression as agreed with OAPA [3 pp6-7]. For the sequential default, Module 1 is the starting stage, Module 2 requires the agreed Module 1 completion conditions, and Module 3 requires the agreed preceding module conditions. Later content may be visible but restricted; the selected presentation must explain the next required step.

A learner must be able to complete the module journey after attending only two workshops. Don't add attendance at W1, W2 and W3 as mandatory module-unlock conditions. Learning activities may have agreed prerequisites, but those shouldn't indirectly turn the two-of-three hurdle into an all-three attendance requirement [2 p2].

Exact eligibility expression

Let M1, M2 and M3 mean that all approved required learning items in the respective module are complete. Let A1, A2 and A3 mean qualifying attendance for the respective workshop, including any authorised exception under W03.

Eligible = M1 AND M2 AND M3 AND ((A1 AND A2) OR (A1 AND A3) OR (A2 AND A3)).

Eligibility applies to access to the assessment submission workflow, including either submission route. Eligibility doesn't itself mean final submission, grade release or course completion. Deadline controls apply separately after the learner is eligible.

Module conditions	Workshop attendance	Expected eligibility
All required modules complete	None	Blocked
All required modules complete	W1 only; W2 only; W3 only	Blocked in each separate case
All required modules complete	W1 + W2; W1 + W3; W2 + W3	Allowed in each separate case
All required modules complete	W1 + W2 + W3	Allowed; the third workshop is not required
M1 incomplete, then M2 incomplete, then M3 incomplete	Any two, then all three, for each incomplete-module case	Blocked in every case

Validation and configuration criteria

G01: Enforce the expression through both course navigation and direct assessment links. Test every attendance combination above with a Student-only account, then

refresh and re-enter. G02: verify that completion persists for the same learner and does not unlock another learner. G03: match the learner's access message to the actual unmet module and/or attendance requirements [2 PRO-01-04, WS-04].

Pending confirmation under D-02: exact required items and completion events, self-check attempt/pass rules and any threshold. The logical gate is final; those input definitions still need client/BA confirmation before configuration signoff.

Evidence consequence: Task 47's displayed pair rule and Task 49's accessible Assessment state don't prove the separate all-module condition [5 p4; 7 p5]. Two workshop prerequisites can't prove completion of the third module. Carry the full expression and missing negative cases into future validation.

Formative and final assessment workflow

Stage	Required behaviour and acceptance criterion
A01 Instructions and dates	Show the optional formative route, direct-final route, submission requirements, rubric/criteria, soft date, hard date and time zone. Soft date must precede the hard date and allow feedback/revision time. Dates and final rubric remain Pending confirmation.
A02 Formative submission	An eligible learner submits for feedback by the configured soft deadline. Record learner, file and timestamp; identify the submission as formative. Alert the facilitator that feedback is required. No summative pass/fail result is released for this stage.
A03 Feedback and revision	Staff retrieve the formative work and provide feedback visible to that learner. Notify the learner when feedback is available. Allow revision and final submission by the applicable hard deadline. Staff must be able to distinguish and retrieve both stages; a generic Not graded state alone is insufficient evidence.
A04 Final submission	An eligible learner makes an identifiable final submission by the hard deadline or authorised individual deadline. Staff retrieve and mark final work against the approved criteria. \
A05 Direct final	Allow final submission without a preceding formative submission or feedback step. A learner must not be forced to wait until the soft deadline has passed to choose the final route. This route does not include an automatic feedback-and-resubmission cycle after final marking.
A06 Result and release	Record the final pass/fail outcome and feedback. Withhold the summative result until the agreed release stage, then show it only to the correct learner and authorised staff. Internal rubric scoring may support marking, but a numeric score alone does not demonstrate the required pass/fail outcome.
A07 Extensions and late cases	An authorised facilitator can give an individual extension or permit a late case. Preserve the policy deadline for other learners. Test before/after the original and extended deadlines and a post-cutoff exception. Apply no late penalty and don't automatically fail a learner solely for missing the date.
A08 State and access integrity	Distinguish formative submitted, feedback available, final submitted, awaiting marking and result released. Use clear native labels or explanations. Records must persist after re-entry and remain linked to the correct learner.

Settings and implementation limits

Pending confirmation: exact dates/time zone, feedback turnaround, final rubric/pass standard, release trigger and who authorises exceptions. A soft-stage extension is not assumed when a hard-deadline extension is granted; confirm any change to the feedback window separately. No fixed number of Moodle activities or particular plugin is required.

Learner progress and staff reporting

Confirmed reporting need: learners can see activity completion, overall progress and the next required stage; appropriate staff can identify learner completion/activity state through a practical course-level view. Learner and staff records must agree and persist [1 p2; 2 TRK-01-03].

The table defines a proposed minimum implementation view for OAPA confirmation under D-05. The workflow information is specified here so Development has a concrete target; the exact staff audience, fields, native views and update interval are not presented as already client-approved.

Information	Learner view	Authorised staff view
Identity and scope	Own course and own records.	Learner identity and course/cohort context sufficient to locate the correct record.
Activity and module progress	Required item states, module completion, overall progress and next required activity.	Required activity/module states; self-check attempt/outcome where used by the approved completion rule.
Workshop attendance	Status for W1-W3, qualifying count and any missing attendance requirement.	Learner/session attendance state and evidence source; authorised exception details where applicable.
Assessment eligibility	Eligible or not eligible, with unmet module/attendance conditions.	Same eligibility result and reasons, using the confirmed gate inputs.
Submission and feedback	Formative/final state, own file/timestamp, available feedback and applicable deadlines.	Formative/final records, feedback/marking work outstanding, deadlines and individual extensions.
Final outcome and completion	Released pass/fail result, feedback and overall completion only when the approved completion rule is met.	Marking/release state, pass/fail outcome and course completion; distinguish ungraded and withheld results from failure.

Access and consistency criteria

R01: A learner sees their own records; a designated facilitator/Teacher sees the agreed course records. Confirm any additional OAPA reporting role before granting access.

R02: compare an incomplete learner and a completed learner before and after each approved trigger, refresh and logout/login. R03: verify learner/staff agreement after the agreed update interval, including module completion, workshop eligibility, both assessment routes and final completion.

R04: Missing, unverified or not-yet-updated information must remain distinguishable from completed or failed. Agree how pending updates are shown. R05: keep overall course completion separate from attendance eligibility, submission and grade release unless an explicit completion policy combines them. The precise overall-completion event remains Pending confirmation under D-02.

Available views and remaining validation

Task 49 evidences H5P attempts and Assignment View all submissions, including two learner records, while the Grader report is stuck on Recalculating grades [7 pp6-9]. Use these as feasibility evidence, not proof that the complete reporting need is met.

Confirm an agreed practical reporting route and diagnose the exact Grader symptom with OAPA if that view is required.

No wider analytics, reporting export, cross-course dashboard or custom reporting backend is added to this Core MVP by assumption. The proposed fields may be delivered through supported existing views or an agreed practical record; OAPA must confirm the minimum useful set and any exact capability gap before additional build work is scheduled.

Scope decisions and delivery handoff

Peer review scope decision

Structured peer review is deferred outside the current Core MVP. The requirements register recognises it as a wider-project requirement, but no supplied decision explicitly approves it for this representative Sprint 2 course [1 pp3-4]. Do not introduce learner-to-learner allocation, anonymity rules, review-quality grades, editorial decisions or peer-review completion gates. A Moodle activity named Workshop does not constitute approval of structured peer review.

If OAPA later approves inclusion, BA/PM must first record its scope and acceptance criteria: submission, reviewer allocation, identity/anonymity, review and revision stages, marking and any effect on completion.

Outstanding confirmations and owners

Decision	Owner and next action
D-02/D-07 Completion	Riley + client: approve required module items, activity trigger/threshold and overall course-completion event. Devs validate the agreed rules; don't infer policy from 75% or 80%.
D-03 Attendance	Reshan + Aryan/OAPA + client: confirm attendance source, authorised recorder/exception route and any duration policy. Validate the gate against the resulting records.
D-04 Assessment	Riley + client/facilitator: approve dates/time zone, rubric/pass standard, feedback timing, release trigger and exception authority. Reshan implements; Zarin independently tests.
D-05 Reporting	Riley + intended OAPA staff: confirm the proposed minimum fields, audience, practical view and update interval. Zarin verifies learner/staff consistency and reports exact access gaps.
