

Independent Test and Technical Validation Report

Reshan's Reusable Moodle Template and Sequential Progression Proof of Concept

Project: Building an Editor Academy Moodle Platform (Team 74, OAPA)

Tester: Dev 2, Shaikh Zarin Tasnim

Work being tested: Reshan's reusable Moodle course template and sequential progression proof of concept

Sprint: Sprint 1

Quick note: did all this testing on the shared MoodleCloud site (localtestsite.moodlecloud.com) since neither of us has edit access to the actual OAPA Academy sandbox yet. Everything below should work the same once we're actually in the real sandbox, but that part hasn't been checked yet obviously.

What I actually tested

Went through Reshan's reusable course template and the sequential progression setup to independently check it actually works, not just take his word for it. Checked whether the template can genuinely be reused (not just a one off), tested the module locking against what the client actually asked for, and had a look at how the assessment and workshop stuff is set up.

1. Can the template actually be reused

To test this properly I made a brand new empty course called "Zarin Test Import" and imported Reshan's "Reusable Template Course" into it using Moodle's Course reuse > Import option, basically following the same steps he wrote up.

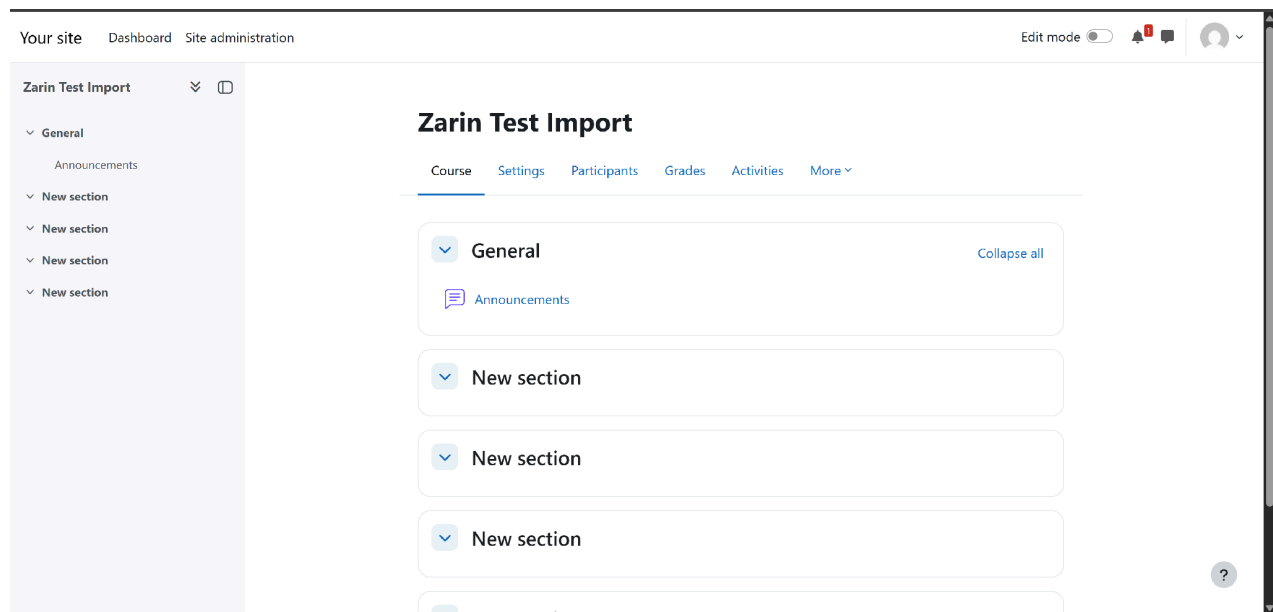

Fig 1. The course before importing anything, just the default empty stuff Moodle gives you.

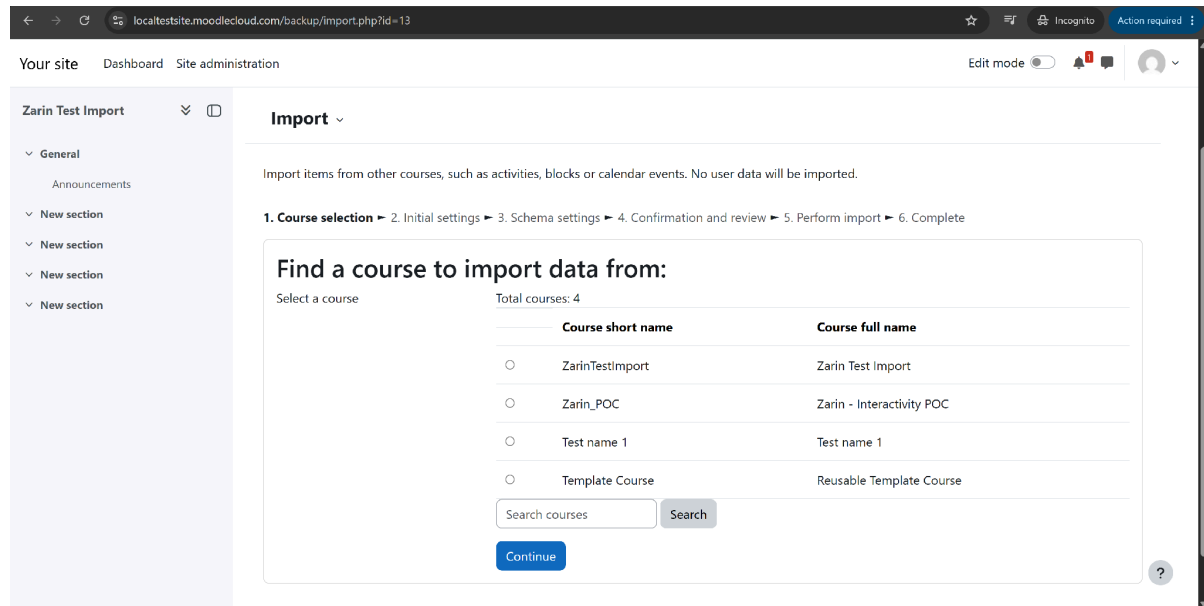

Fig 2. Picking Reshan's Template Course as the source to import from.

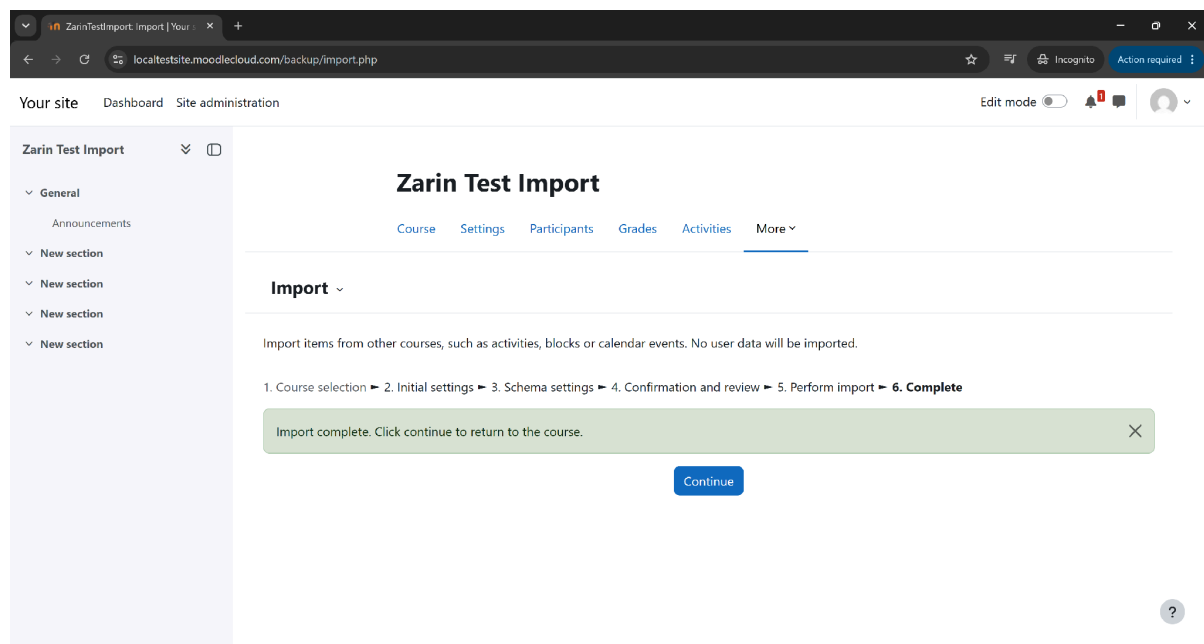

Fig 3. Import finished without any errors.

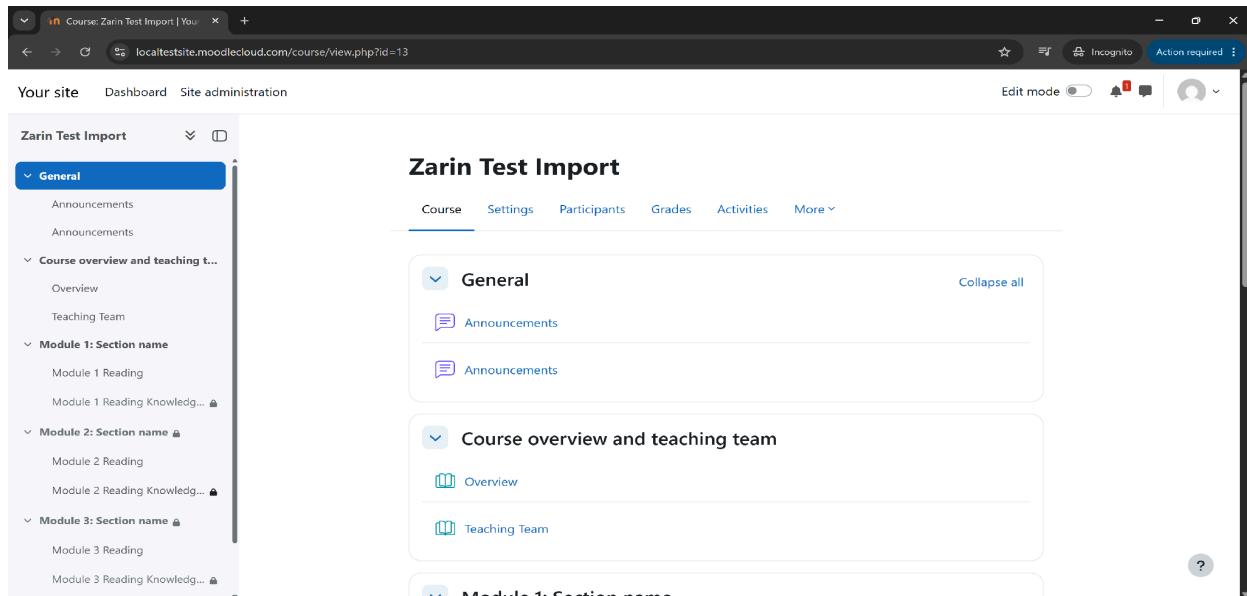

Fig 4. What the course looked like after importing, all 3 Modules, the readings, knowledge checks and the lock icons all showed up exactly like in Reshan's original.

So this one's a pass. The import actually works and pulls across the whole structure including the lock settings into a totally new course, so it's not just something that happens to work in his one course, it's genuinely reusable.

Small thing I noticed though: after importing there were two separate "Announcements" showing up under General instead of just one. Doesn't break anything but might be worth cleaning up if this template gets used for real courses later, could be confusing.

2 & 3. Does Module 1 to Module 2 locking actually work

Tested this logged in as the student1 account rather than my own Course Creator login, since teacher accounts can just bypass restrictions and previewing doesn't show you what a real student would actually experience.

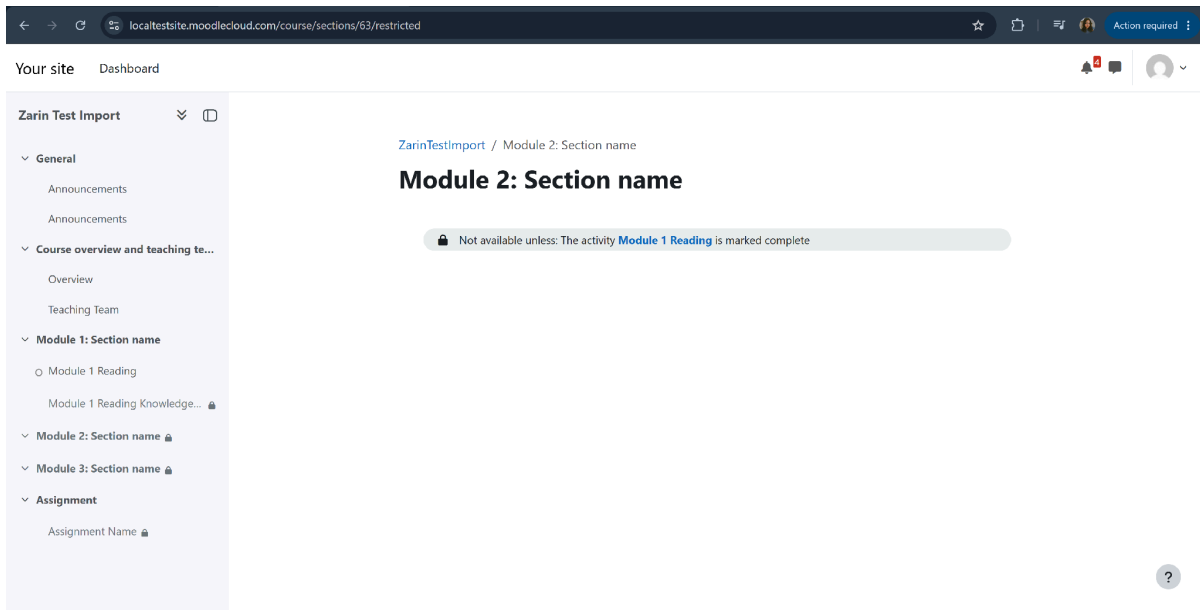

Fig 5. Tried opening Module 2 Reading directly as student1 before finishing Module 1. Moodle sent me to a proper "restricted" page (you can see it in the URL, /course/sections/63/restricted) with a message saying Module 1 Reading needs to be marked complete first. Good sign, this means the block is actually enforced on the server, not just something hidden in the menu, so you can't cheat it by bookmarking a link.

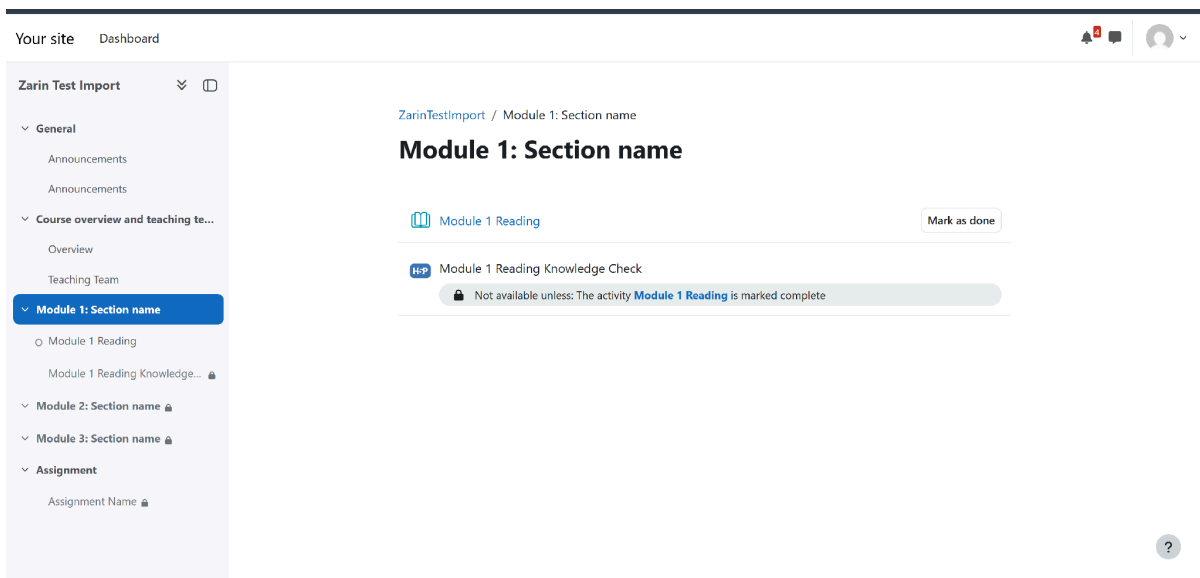

Fig 6. Opened Module 1 Reading as student1, there's a "Mark as done" button here. Also noticed the Knowledge Check underneath it is locked too until you finish the reading, so the locking happens inside modules as well, not just between them.

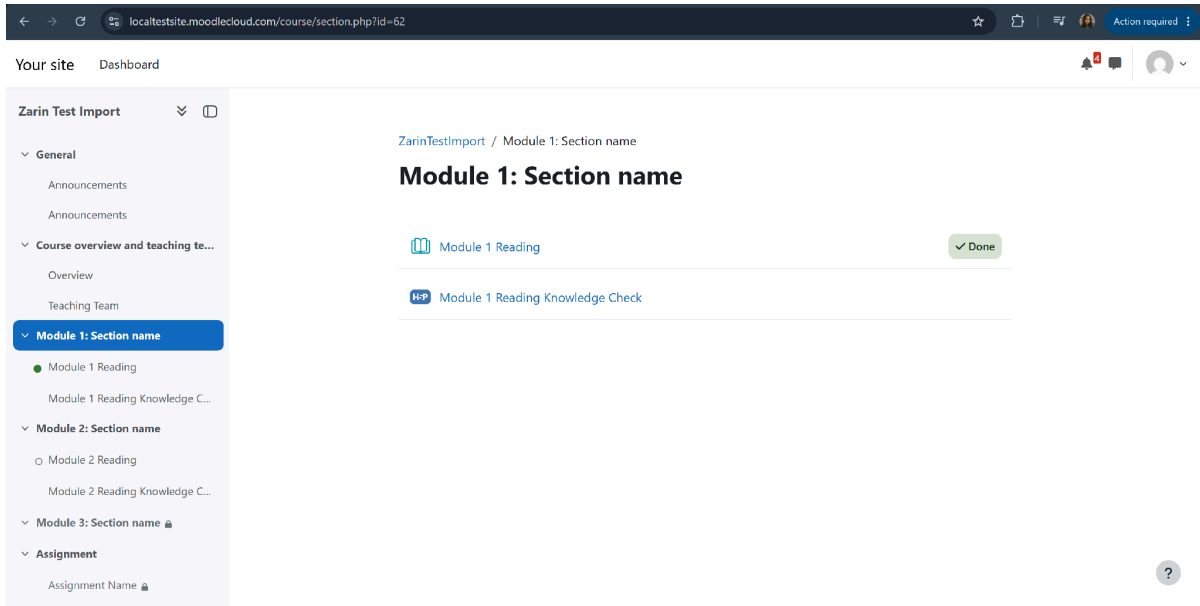

Fig 7. After clicking Mark as done, Module 1 Reading shows Done in green, its Knowledge Check unlocks, and Module 2 opens up with Module 2 Reading now clickable. Module 3 is still locked though, which makes sense since only Module 1 is finished so far.

This one's a pass too. Tested it both ways, confirmed it's blocked before you finish the prerequisite and confirmed it actually opens up right after. Also checked that Module 2 still doesn't unlock Module 3 early, so the same locking logic seems to be applied consistently across the whole template rather than just being set up once and forgotten.

5. Checking the assessment and workshop setup

Had a look at the Assignment activity to see if its access rules actually match what the client said in the meeting (they need to finish all the modules AND attend 2 out of 3 live workshops before the assessment unlocks).

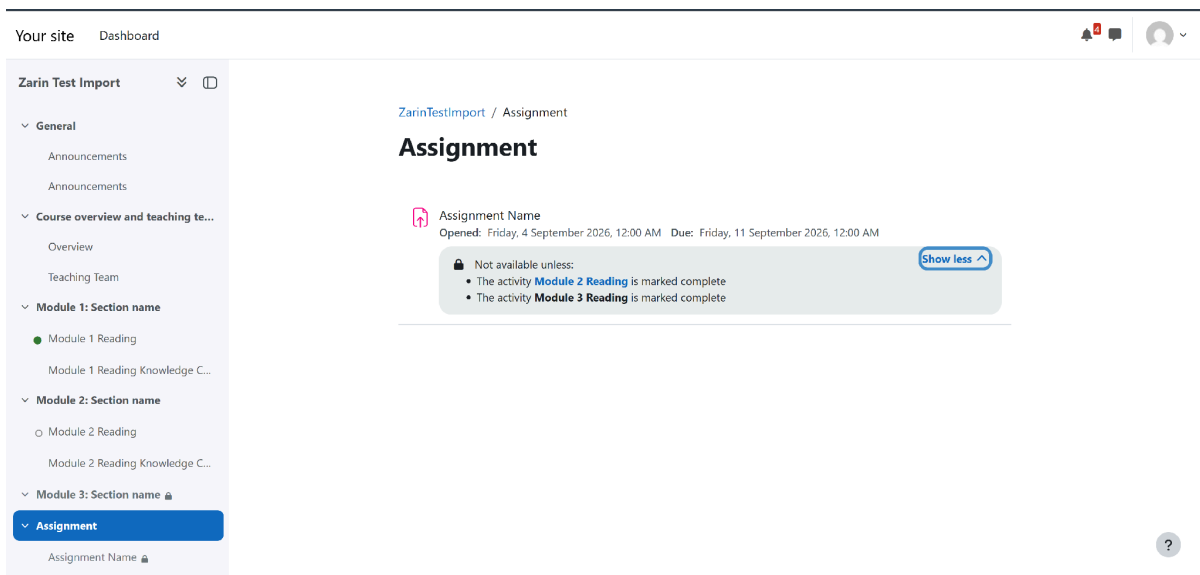

Fig 8. Clicked Show more on the Assignment's restrictions, it needs Module 2 Reading complete AND Module 3 Reading complete.

First thing I noticed: Module 1 isn't listed as a direct requirement here. In practice it still works out fine though, since you can't even reach Module 3 without doing Module 1 first (it's all chained together), so functionally all three modules still end up required. Might be worth asking Reshan if that's intentional or if Module 1 should just be added directly too for clarity.

Bigger issue: there's no workshop attendance requirement anywhere. I went through the whole sidebar and there's no Attendance activity, nothing tracking workshops, nothing like that at all. This doesn't match what the client asked for, right now someone could finish the assessment having gone to zero workshops as long as they've read the three modules.

Not saying this is Reshan's fault necessarily, workshops are probably still being run through Zoom outside Moodle for now, so this is more of a "still needs to be built" gap than something broken. But it should get flagged so it doesn't get missed later.

6. Also tested the actual knowledge check quizzes

While I was going through as student1 anyway, I figured I'd actually complete the knowledge check quizzes inside Module 1 and Module 2 too since they're part of the same locking chain I was testing. Found two more issues doing this.

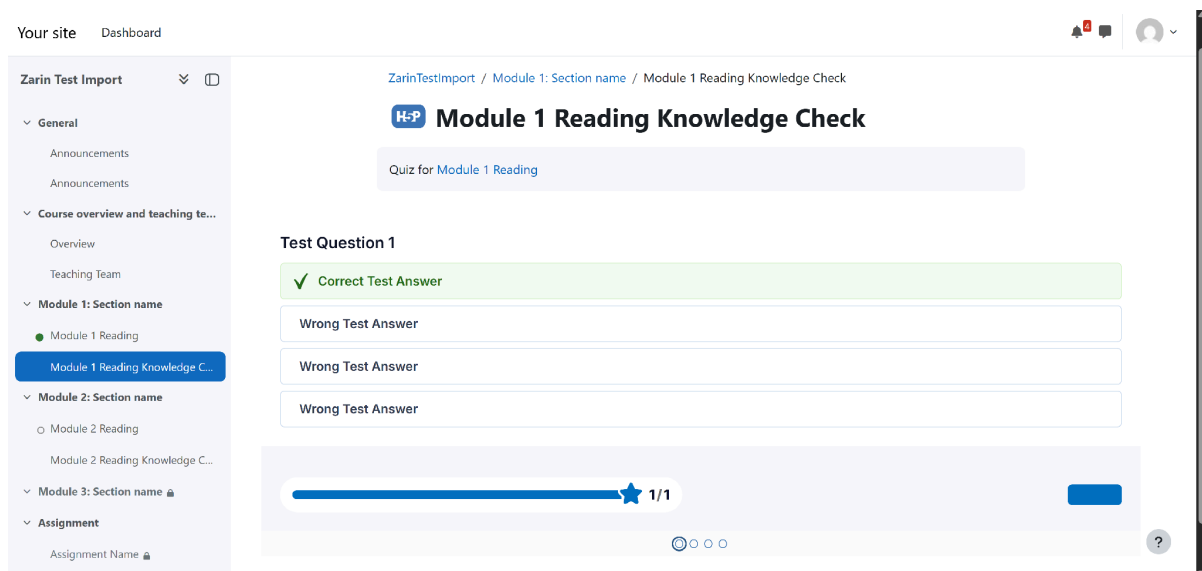

Fig 9. Module 1's Knowledge Check, got Question 1 right (1/1), shows 4 questions total in the progress bar at the bottom.

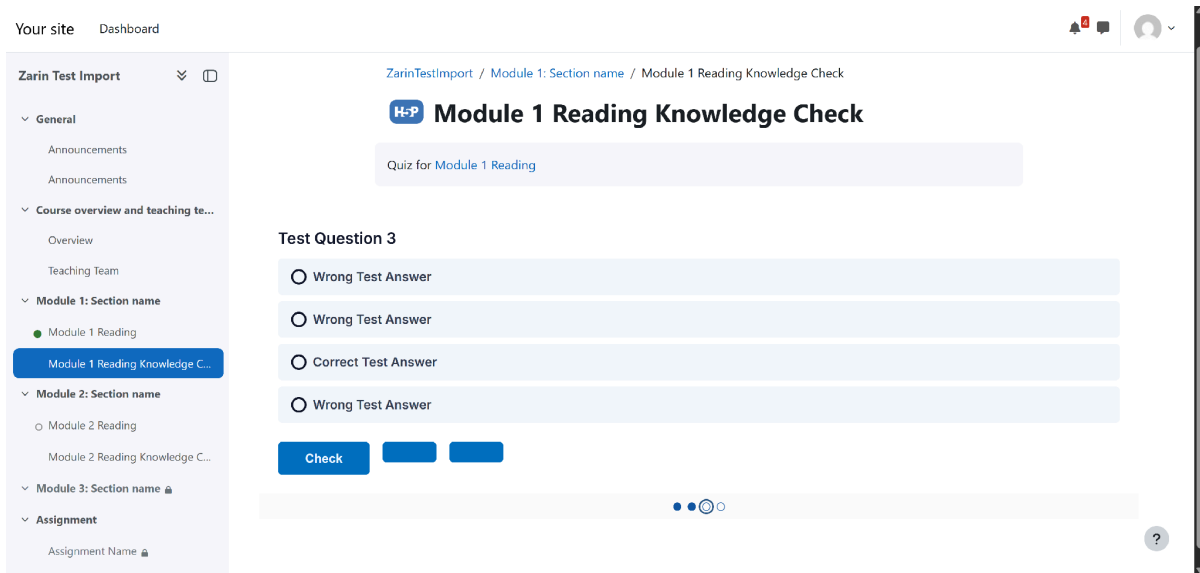

Fig 10. Got to Question 3 and noticed two blue buttons with no text on them next to Check. Pretty sure these are supposed to be Previous/Next buttons that just aren't showing their labels.

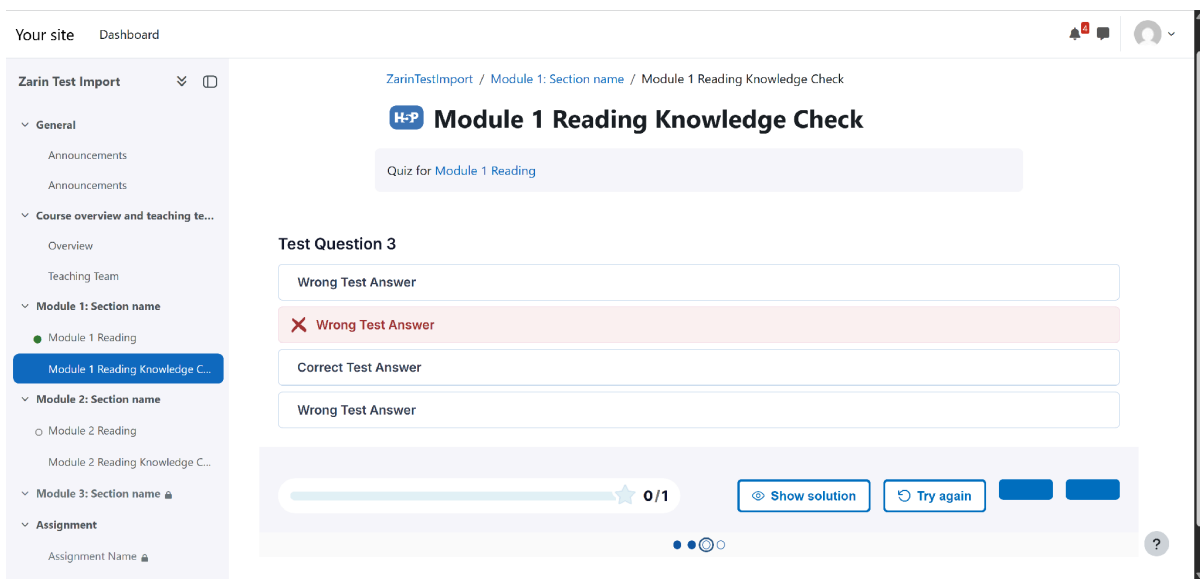

Fig 11. Answered Question 3 wrong (0/1), only options are Show solution and Try again, plus the same two blank buttons. Couldn't find any way to actually move on to Question 4, so it's not just a visual glitch, it genuinely gets stuck here.

So that's a real bug, not just something looking a bit off. The Module 1 Knowledge Check breaks somewhere around Question 3 and you can't finish it. Since it's an H5P content issue rather than a Moodle restriction issue, probably needs a look inside the H5P activity itself rather than the course settings.

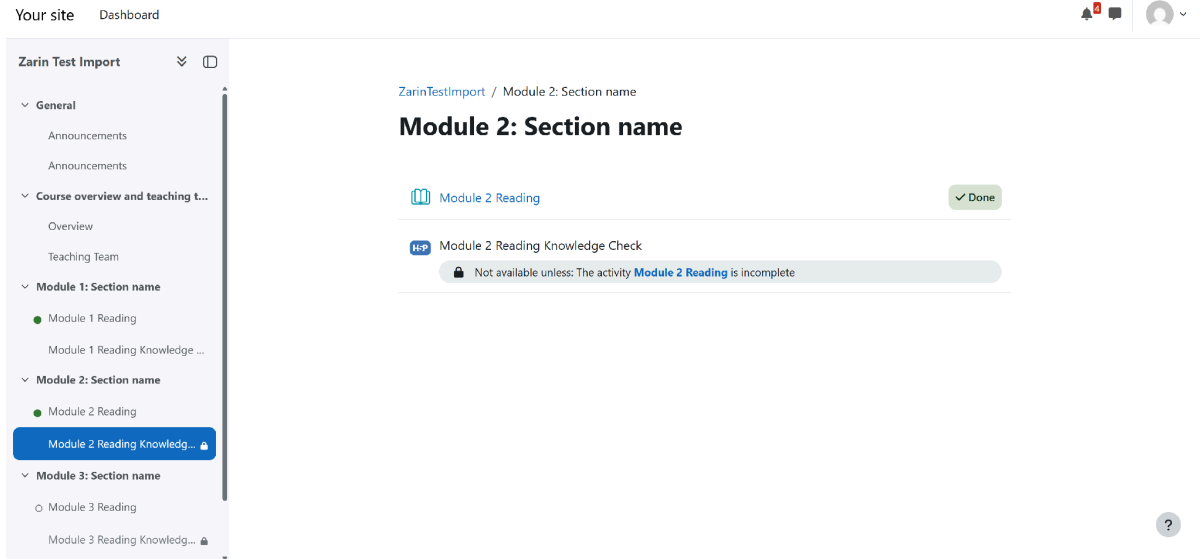

Fig 12. Module 2 Reading marked Done, but the Knowledge Check under it is still locked, saying "Not available unless: The activity Module 2 Reading is incomplete."

This one's actually backwards. It should say "is marked complete" like Module 1's version does, not "is incomplete". As it's set up right now this can never unlock, since finishing the reading means it's no longer incomplete, so the condition never gets satisfied. Probably just a simple mistake where the complete/incomplete toggle got left on the wrong setting, but it's a real problem since it currently blocks Module 2 completely.

Quick summary: what I expected vs what actually happened

- Module 1 to Module 2 locking: expected it to stay blocked until Module 1 is done. That's what happened. Pass.
- Module 2 to Module 3 locking: expected the same thing. Also worked as expected, Module 3 stayed locked after only finishing Module 1. Pass.
- Template reusability: expected the import to bring across the full structure into a new course. It did. Pass.
- Assessment requiring all 3 modules: expected it to need all three. Technically it does, just indirectly through Modules 2 and 3 rather than listing Module 1 directly. Mostly a pass, just worth double checking with Reshan.
- Assessment requiring 2 of 3 workshops: expected this to be a condition. It isn't there at all. Fail, needs to be added.
- Module 1 Knowledge Check, finishing all 4 questions: expected to be able to complete it normally. Got stuck after Question 3 because of broken buttons. Fail.
- Module 2 Knowledge Check unlocking after the reading is done: expected it to unlock. It never can, because the condition is set backwards. Fail.

Bugs and issues I found, written down properly

- Two "Announcements" showing up under General after importing instead of one (minor, just looks a bit messy).
- No workshop attendance requirement anywhere on the Assignment, doesn't match what the client confirmed they need (2 of 3 workshops). Probably needs a new Attendance type activity built and linked in.
- Module 1 isn't listed as its own direct requirement on the Assignment, it only works because of the chain through Modules 2 and 3. Not actually broken, just worth confirming it's meant to be like that.

- Module 1's Knowledge Check has broken or missing navigation buttons from Question 3 onward and can't be finished (see Fig 10-11). Looks like something wrong inside the H5P content itself.
- Module 2's Knowledge Check has its unlock condition backwards, says "is incomplete" when it should say "is marked complete" (see Fig 12). This one fully blocks Module 2 right now, probably the most important one to fix first.

What happens next

Haven't asked for any fixes yet, wanted to get everything documented properly first. Once Reshan's had a look at the workshop gap (or lets us know it's meant to come later), fixes the backwards restriction on Module 2's quiz, and checks out what's going on with Module 1's quiz getting stuck, I'll go back through and retest the same stuff using student1 again.
