

Task 49: Learner Tracking, Reporting and Access Verification

Student side and staff side evidence

Shaikh Zarin Tasnim (Dev 2), Team 74, OAPA Editor Academy Moodle Platform

1. What This Task Was About

For this task I had to independently check learner completion, progress, reporting and access behaviour on the real OAPA Academy now that the Week 2 workshop and assessment setup (built by Reshan) is finished. The task specifically asked for this to be checked from an actual learner/test state rather than just previewing the course as a Teacher, so that's the approach I took below.

I did all of my testing on "Team 74 - Course Development," since this is the course where the Workshop gating and the 2 of 3 assessment eligibility rule actually exist. The other real OAPA course, "Foundations of Academic Peer Review - Student Dev Copy," only has Teacher accounts enrolled at the moment and doesn't have this structure built into it yet.

2. How I Tested This

My account is enrolled on "Team 74 - Course Development" with both a Teacher role and a Student role at the same time, the same setup Reshan already uses on his own account for his Task 47 and Task 48 testing. Since Moodle keeps completion, attempt and submission records against the account itself rather than against whichever role happens to be active, everything I did as a learner below was recorded under a genuine Student enrolment, not just a temporary role preview.

This ends up mattering quite a bit in Section 7. Because my account is a real Student on the course, both the Assignment and the Workshop reporting screens pick it up correctly, which closes off a reporting gap that a Teacher account without a proper Student enrolment would otherwise run into.

3. Completion Behaviour and Whether It Sticks

I went through the three module structure end to end as a student: Reading, then Reading Knowledge Check, then Workshop, repeated for Modules 2 and 3, finishing at the Final Assignment. Each Reading Knowledge Check is an H5P question set, and I scored 4 out of 4 on all three, which is the 75% threshold each module needs before its Workshop unlocks.

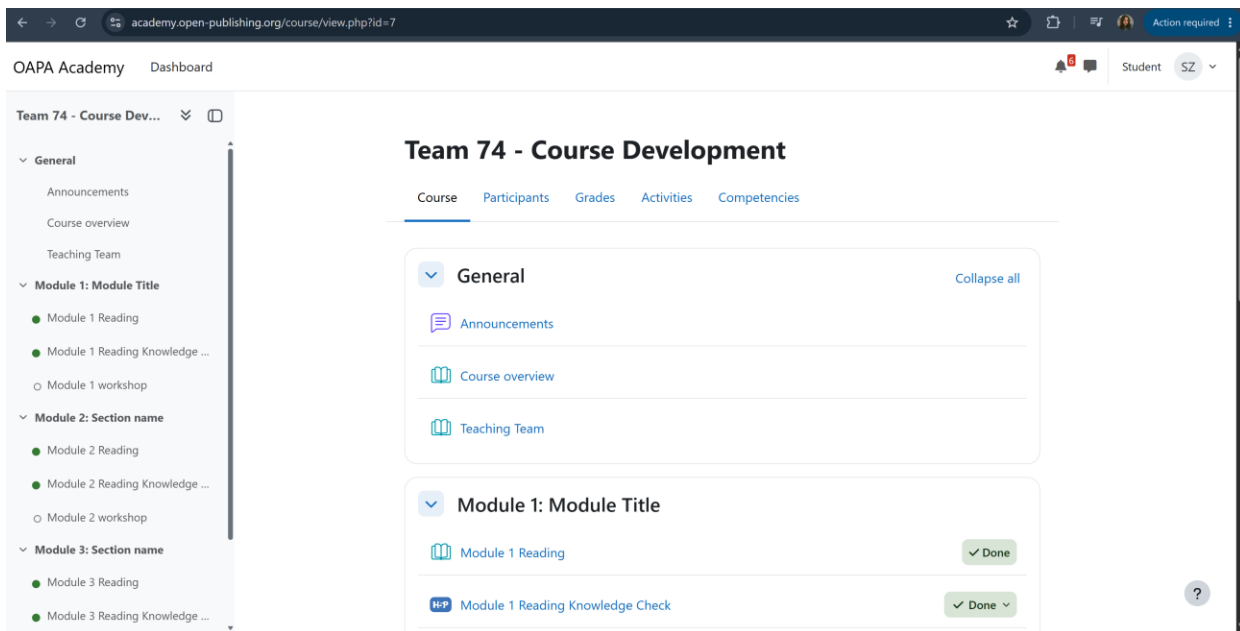

Fig. 1. Course home in Student view. Module 1 is fully complete with green Done badges, and Modules 2 and 3 are correctly locked, showing only their Readings as available.

To check that completion actually persists and doesn't quietly reset, I marked Module 1's Workshop as Done, switched my view back to Teacher, then switched back to Student on a fresh page load. The Done status was still there afterwards.

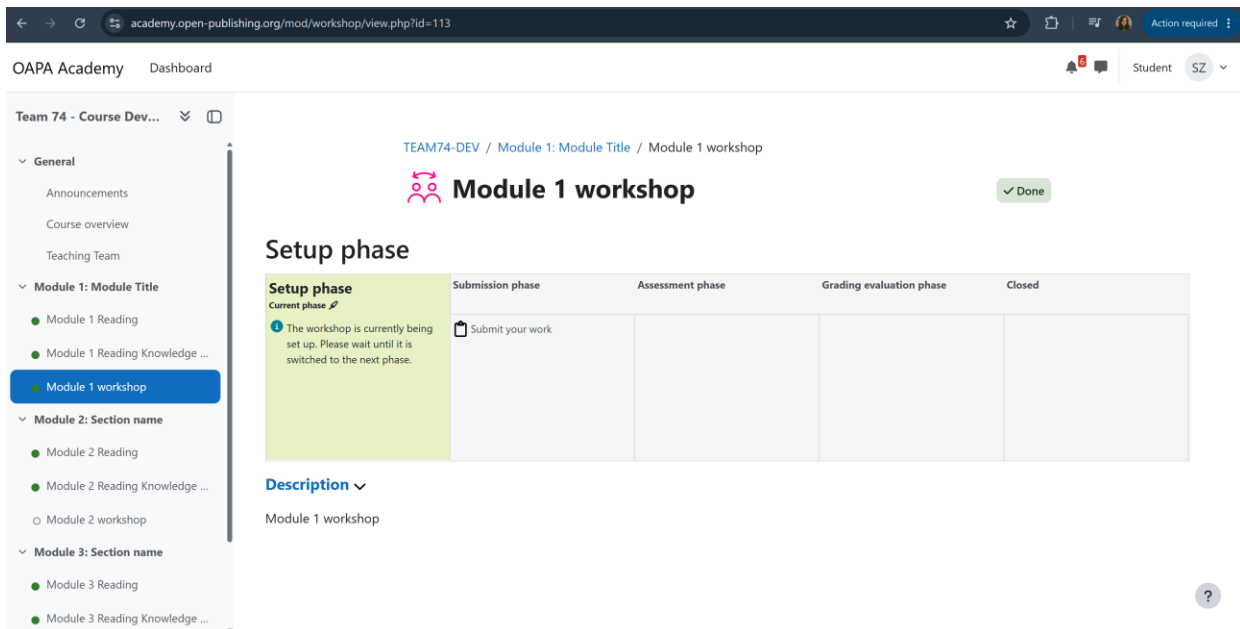

Fig. 2. Module 1 Workshop before I marked it complete, showing the Setup phase and the Mark as done button.

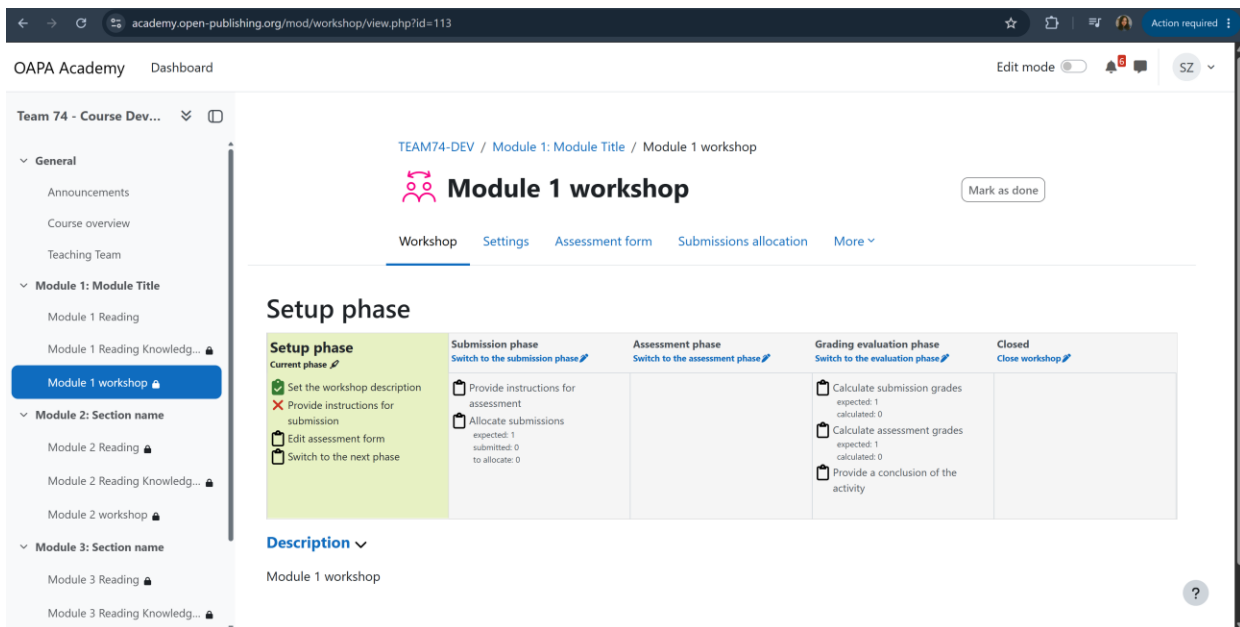

Fig. 3. Module 1 Workshop right after marking it Done, seen in Student view.

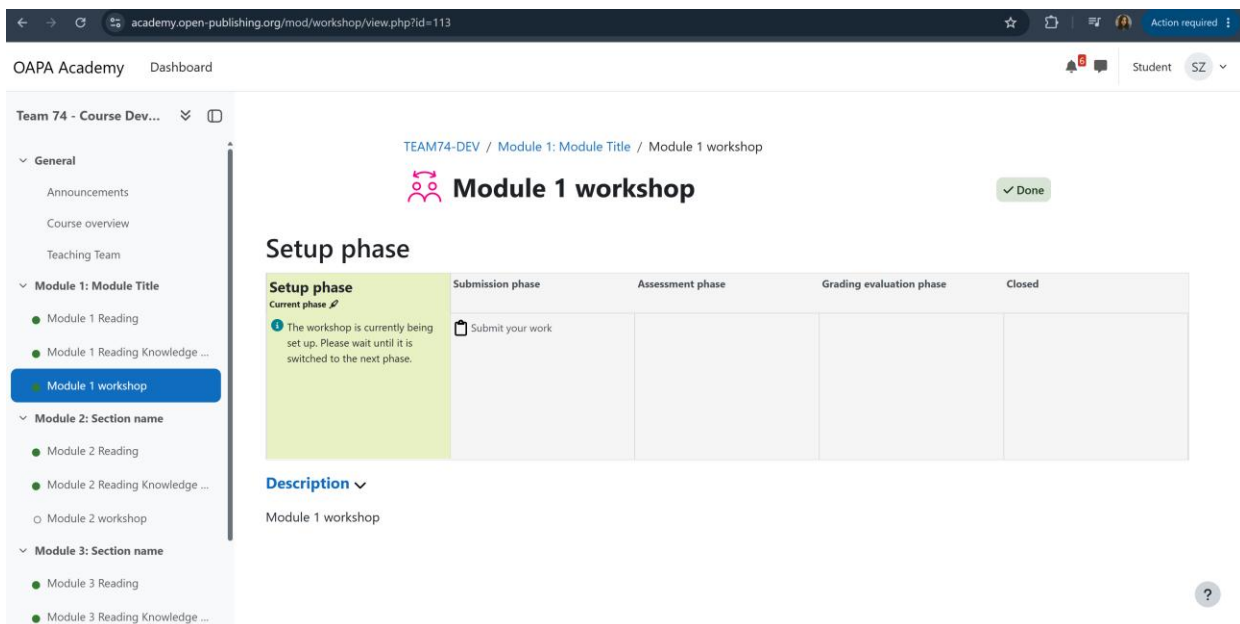

Fig. 4. The same Module 1 Workshop reopened after switching back to Teacher and then back to Student. The Done status held up correctly.

Progression between modules also still works the way it should after the Week 2 changes. Module 2's activities stayed locked until I finished Module 1's Reading Knowledge Check, and Module 3 behaved the same way against Module 2. This lines up with what I already verified in the Sprint 2 Week 1 cross test, so I'm confident the Week 2 workshop and assessment work didn't break anything that was already working.

4. Workshop Eligibility and Getting Into the Assignment

Each module's Workshop only unlocks once that module's Reading Knowledge Check has been scored at 75% or above. Marking a Workshop as complete is a manual Done button rather than

something tied to an actual peer submission being marked, and all three workshops sat in Setup phase the entire time I was testing.

The Final Assignment is supposed to unlock once any two of the three workshops are done, and I checked this rule across a few different states:

- Zero and one workshop done: locked. I didn't rebuild this state from scratch this round since all three of my modules were already finished going in, but the Assignment page itself still shows the exact restriction rule (see Fig. 7 below), and Reshan already confirmed this same locked behaviour at zero and one workshops in his own Task 47 testing.
- Two of three done, using Module 1 and Module 2, which is a different pairing to the one Reshan tested (he used Module 2 and Module 3): the Assignment unlocked correctly.
- All three done: the Assignment stayed accessible, as expected.

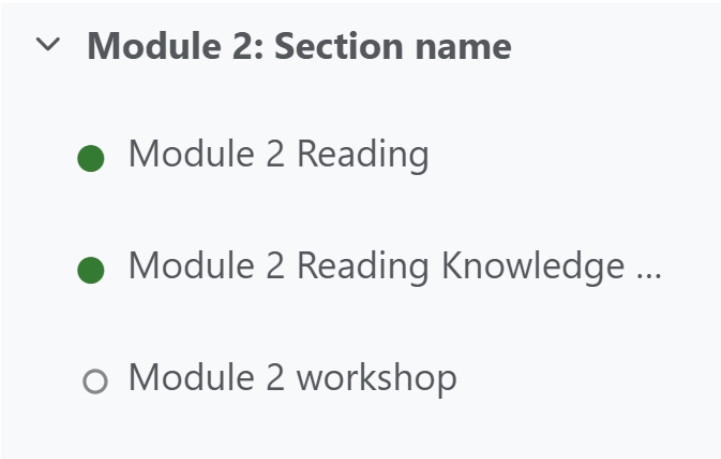

Fig. 5. Sidebar view showing Module 2's Reading and Knowledge Check finished, but the Module 2 Workshop still unmarked. This is the state right before I completed the second workshop in the Module 1 plus Module 2 pairing.

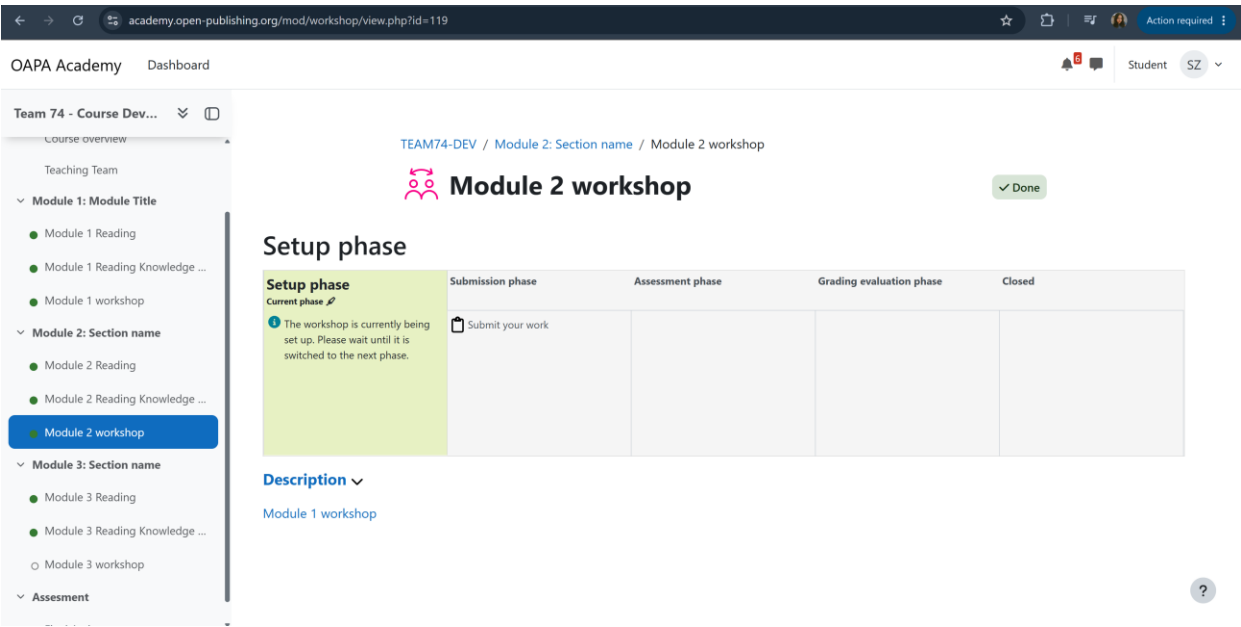

Fig. 6. Module 2 Workshop marked Done, which completes the Module 1 plus Module 2 pairing.

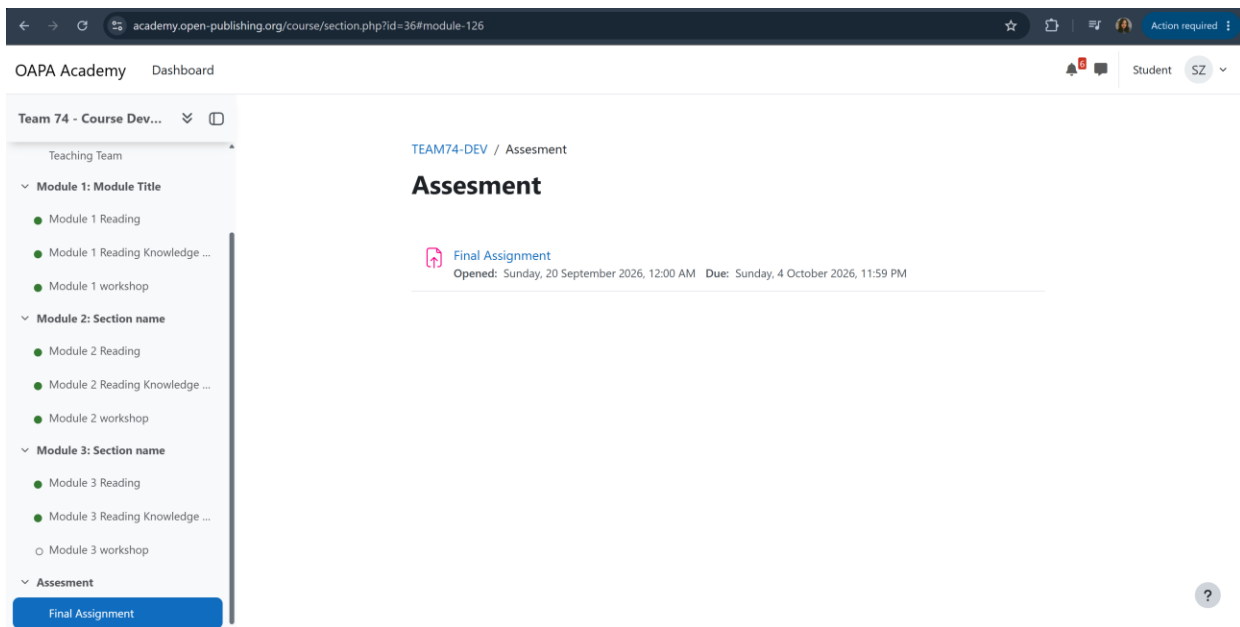

Fig. 7. Final Assignment accessible once Module 1 and Module 2 workshops are both done. The instructions on the page correctly show the 4 October soft deadline for feedback and the 18 October hard deadline for a pass or fail grade.

One thing worth flagging on Fig. 6: the Module 2 Workshop's description field actually says "Module 1 workshop," which is wrong. I've written this up as an issue in Section 8, and the same mistake shows up again on Module 3's workshop below.

5. Testing All Three Workshops Done

I finished Module 3's Reading and scored 4 out of 4 on its Knowledge Check, which unlocked the Module 3 Workshop, and I marked that as Done too, giving me the full three of three state.

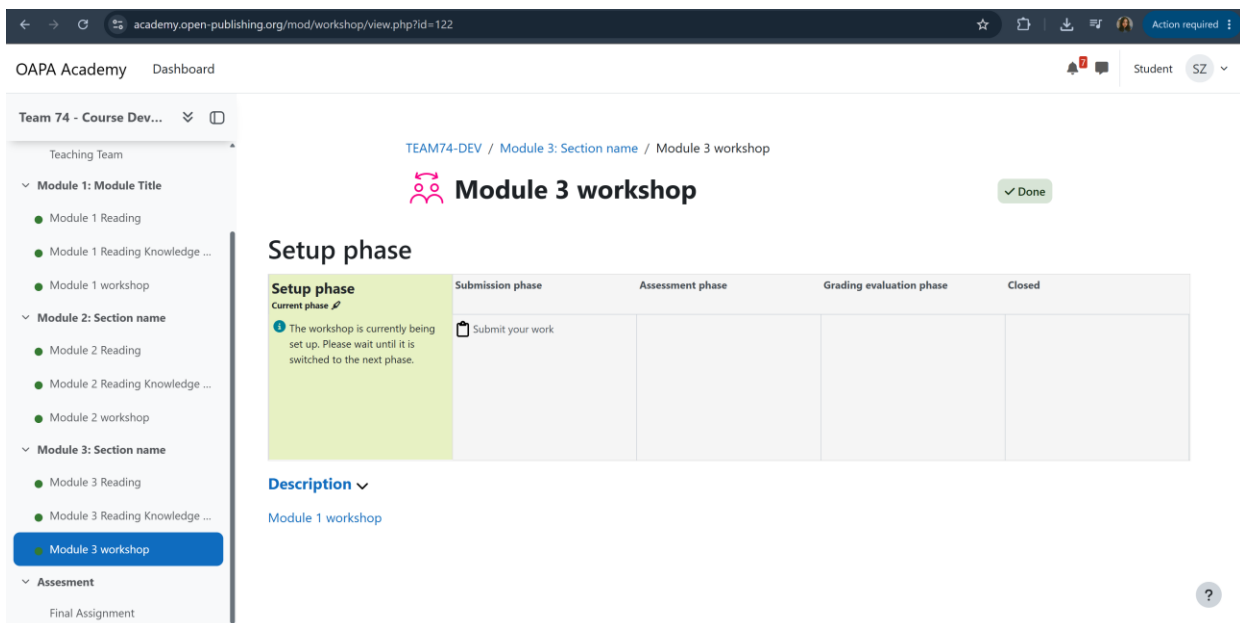

Fig. 8. Module 3 Workshop marked Done. Its description also incorrectly reads "Module 1 workshop," the same copy-paste mistake seen on Module 2, so this looks like one shared issue rather than two separate ones.

With all three workshops done, the Final Assignment was still fully accessible, and the formative submission I had already made earlier (see Section 6) was still sitting there untouched. That's good evidence on its own that the Assignment holds onto its state properly, not just the workshops.

6. Submitting the Assignment and Checking Quiz Attempt History

I tested a formative submission, meaning one made before the 4 October soft deadline, by uploading a test file to the Final Assignment:

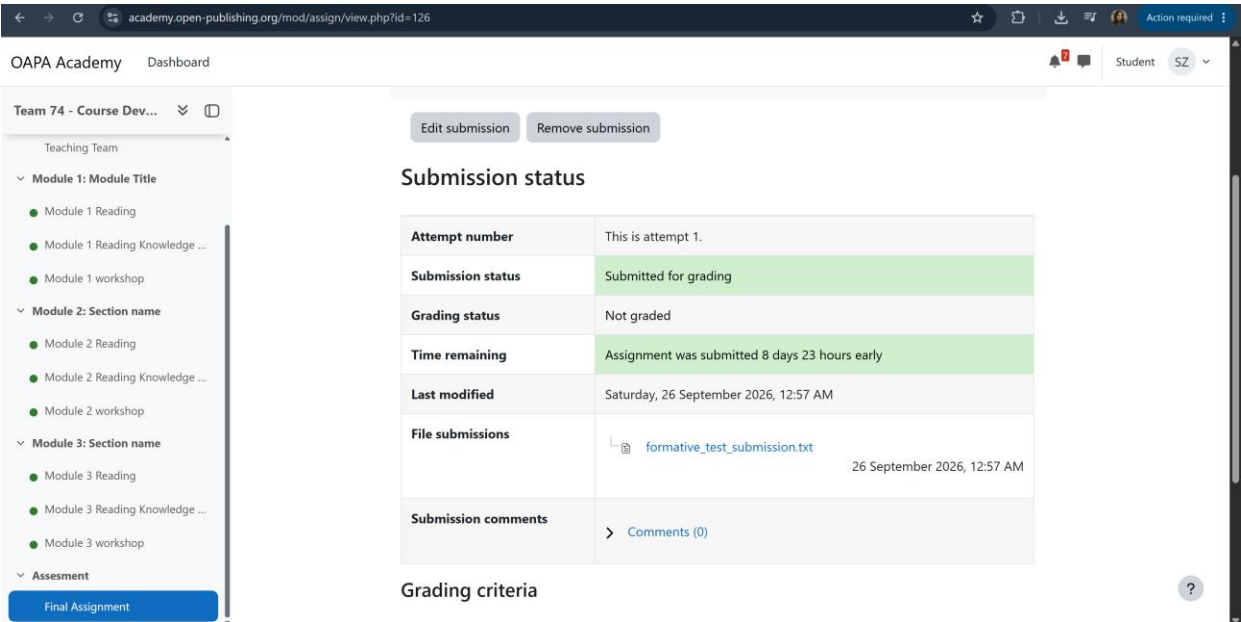

Fig. 9. Formative submission accepted. Status shows Submitted for grading, Not graded, and Assignment was submitted 8 days 23 hours early, with the correct file and timestamp of 26 September 2026, 12:57 AM.

I also checked quiz attempt tracking from the student side, using the H5P Attempts report tab on the Module 1 Reading Knowledge Check. It shows both a quick summary and a full breakdown of the attempt itself:

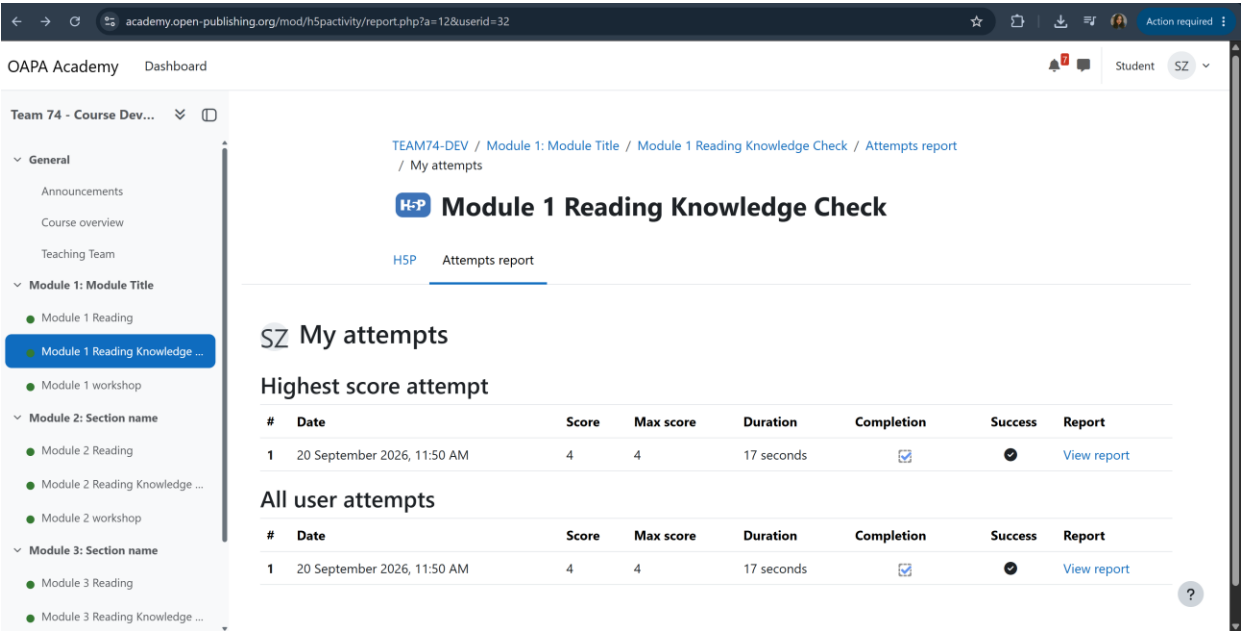

Fig. 10. My attempts summary, showing the highest score attempt and the full attempt history, both at 4 out of 4 and dated 20 September 2026.

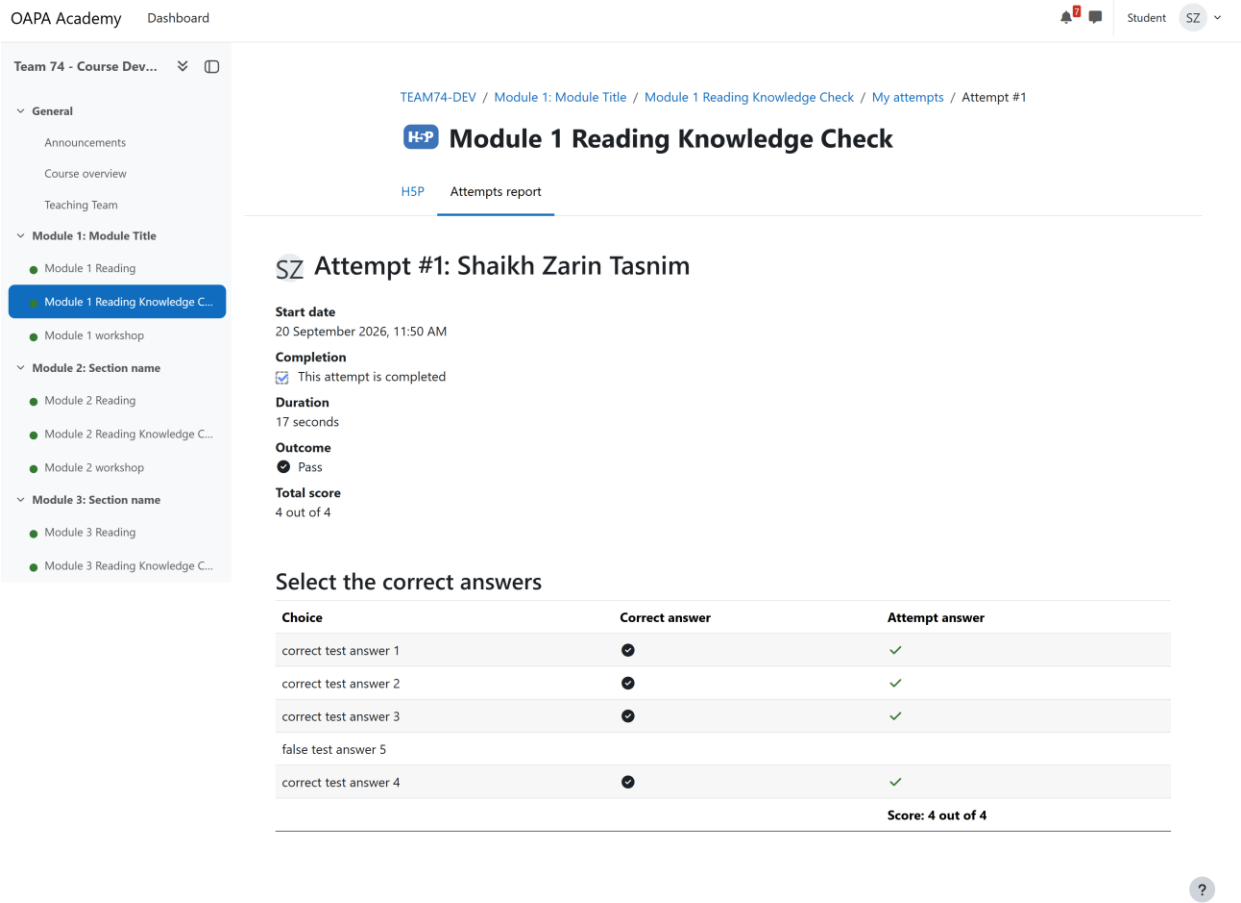

Fig. 11. Full attempt detail showing Outcome: Pass, a total score of 4 out of 4, and a question by question breakdown comparing the correct answer to what I actually selected.

7. What the Staff Side Reporting Actually Shows

7.1 The Gradebook is currently stuck

When I opened the course's Grader report, it was stuck on "Recalculating grades," along with a warning banner reading "Activity deletion in progress! Some grades are about to be removed." I refreshed the page and it was still stuck afterward.

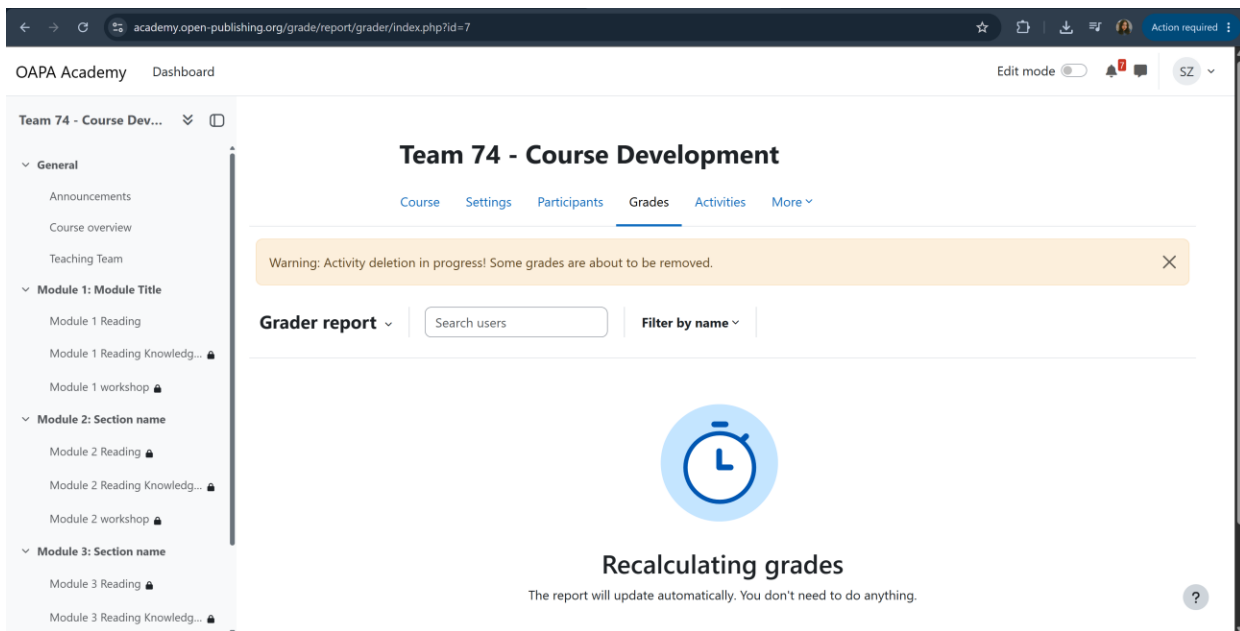

Fig. 12. Grader report stuck on Recalculating grades, with the activity deletion warning banner visible above it.

My best guess is that this is a background cleanup task left over from an earlier activity deletion that never actually finished, most likely because this Moodle site's cron isn't running on a regular schedule. Fixing it needs Site Administrator access, which none of us on the team currently have. I've logged this as a genuine, still open reporting limitation in Section 8, and it isn't something my testing caused.

7.2 Assignment submissions are showing up correctly

The Final Assignment's "View all submissions" screen correctly lists both Student accounts enrolled on the course: Reshan Lahandapura, graded 100 out of 100 with an extension granted to 22 October from his own Task 48 testing, and my own account, showing Submitted for grading, not yet graded, with the file and timestamp intact.

7.3 Workshop allocation now recognises my account too

The Module 1 Workshop's Submissions allocation screen correctly lists both Student accounts as participants: Reshan Lahandapura and myself, both showing "No submission found for this user," which makes sense given the workshop is still in Setup phase.

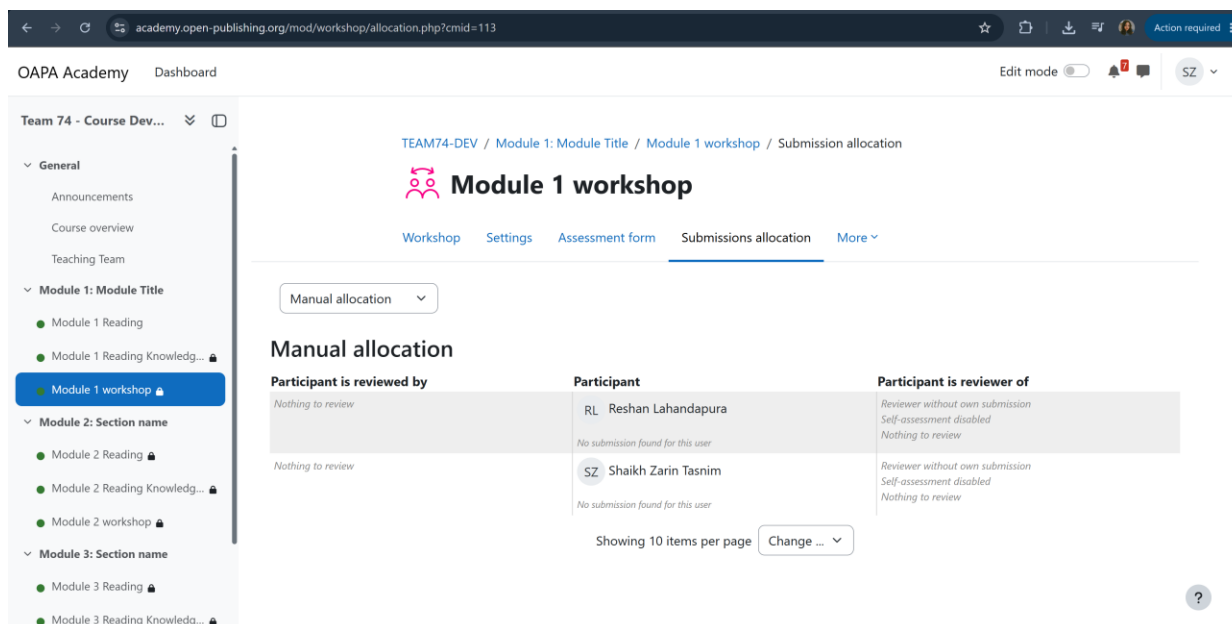

Fig. 15. Module 1 Workshop Manual allocation screen, now showing both Reshan Lahandapura and myself as enrolled Student participants.

This confirms the Workshop level reporting works properly once an account actually holds a real Student enrolment, matching what I already found at the Assignment level above. There's no reporting gap here once the account is set up correctly.

8. Issues Found and What's Still Outstanding

#	Issue / Observation	Severity	Status
1	Both the Module 2 and Module 3 workshop description fields read "Module 1 workshop" instead of their own module name. Looks like one shared copy-paste mistake rather than two separate ones.	Low, cosmetic	Open, to raise with Reshan
2	The course Grader report is stuck on "Recalculating grades" after an activity deletion task that never finished. Still stuck after a refresh.	Medium, blocks staff reporting	Blocked, needs Site Admin access
3	The real calendar dates (today is 26 September, soft deadline is 4 October, hard deadline is 18 October) meant a genuine direct-final submission, made after the soft deadline, couldn't be tested without waiting or changing the dates.	N/A	Deferred, covered in the Task 50 report

9. Summary

I went through all ten checklist items for this task using an account that's genuinely enrolled as both Teacher and Student on "Team 74 - Course Development": completion behaviour, whether

that completion actually persists, whether progression still works correctly after the Week 2 changes, workshop eligibility across several different states, the Assignment's access rule, evidence of both insufficient and sufficient workshop states, quiz attempt tracking, and the staff side reporting views that are actually available right now. All of this was correctly picked up at both the Assignment and Workshop level. One platform issue is still open (the stuck Gradebook, which needs Site Administrator access to fix), along with one small cosmetic mistake in the workshop descriptions. Evidence from both the student side and the staff side is included throughout this report.
