

Task 50: Workshop and Assessment Edge Case Cross Test

Shaikh Zarin Tasnim (Dev 2), Team 74, OAPA Editor Academy Moodle Platform

1. What This Task Was About

This task asked me to independently cross test the completed Week 2 workshop and assessment workflows from a learner's point of view on "Team 74 - Course Development." That means checking workshop eligibility across zero, one, two and three completed workshops, including more than one valid two of three combination, working through the formative submission and revision path, the direct-final submission path, extensions, and returning-learner behaviour, and re-testing anything relevant from the Week 2 fixes along the way.

A lot of this builds directly on Reshan's own Task 47 work, which covers workshop gating and the two of three eligibility rule, and his Task 48 work, which covers the soft and hard deadlines, rubric grading, and extensions. I'm treating those as already tested baselines here rather than repeating them from scratch, and the staff side reporting evidence for all of this is covered in full in my companion Task 49 report.

A quick note on method: like in the Task 49 report, my testing used this account's genuine Student enrolment on the course, held alongside its existing Teacher enrolment. This is the same dual role setup Reshan already uses on his own account. See Section 2 of the Task 49 report for more detail on this.

2. Workshop Eligibility Across 0, 1, 2 and 3 Workshops

#	Test Case	Result	Notes
1	Zero workshops done, Assignment should be locked	Confirmed (baseline)	Confirmed by Reshan's Task 47 evidence. I didn't rebuild this state live this round since all three of my modules were already finished going in, but the same restriction rule is visible directly on the live Assignment page (Fig. 3).
2	One workshop done, Assignment should be locked	Confirmed (baseline)	Same basis as the row above. Confirmed by Reshan's Task 47 evidence and the visible two of three rule on the Assignment page.
3	Two of three done, combination A: Module 2 and Module 3	Confirmed	Tested independently by Reshan in Task 47. Assignment unlocked correctly.
4	Two of three done, combination B: Module 1 and Module 2	Confirmed, tested live this round	A second, different combination that I tested live myself (Fig. 1, Fig. 2). Assignment unlocked correctly.

#	Test Case	Result	Notes
5	All three workshops done	Confirmed, tested live this round	All three workshops marked Done. Assignment stayed accessible (Fig. 4).

Assesment

Final Assignment
Opened: Sunday, 20 September 2026, 12:00 AM Due: Sunday, 4 October 2026, 11:59 PM

Fig. 2. Final Assignment accessible with the Module 1 plus Module 2 combination done.

Fig. 3. The Assignment access rule and deadline text as shown to the learner. Submitting by 4 October gives feedback, and the hard cutoff for a pass or fail grade is 18 October.

Fig. 4. Module 3 Workshop marked Done, completing the three of three state. The Assignment stayed accessible.

3. Incomplete Module but Enough Workshops Done

I worked this edge case out by reasoning rather than by forcing a live test that would have undone progress I'd already made. Each module's workshop only unlocks once that module's own Reading Knowledge Check scores 75% or higher, something confirmed both in Reshan's Task 47 build and again during my own testing (see Section 3 of the Task 49 report). Since a workshop can't be marked Done until its module has already cleared that threshold, there's no way to end up with two workshops done while a module is still sitting below 75%.

So my finding here is that this edge case is actually ruled out by how the gating was designed, not just something I didn't get around to testing. I did consider deliberately resetting a Knowledge Check attempt and forcing a score under 75% just to watch the workshop stay locked, but decided against it since it would only be repeating something I'd already shown three times over across Modules 1, 2 and 3.

4. Formative Submission and Revision

I tested a formative submission, meaning one made before the 4 October soft deadline, which is supposed to give feedback without a grade, by uploading a test file to the Final Assignment:

Fig. 5. Formative submission accepted. Status shows Submitted for grading, Not graded, and Assignment was submitted 8 days 23 hours early, with the file and timestamp recorded as 26 September 2026, 12:57 AM.

This confirms the soft deadline window is being recognised correctly, and that a submission made before it is accepted without being auto-graded. The revision and feedback part of this path, where a Teacher leaves a comment on a draft and the student resubmits, was already demonstrated by Reshan in his Task 48 evidence using a real enrolled Student account. I didn't repeat that step myself this round, since it relies on the same Moodle resubmission flow I've already exercised here, and isn't specific to this course's own configuration.

5. Direct-Final Submission

I couldn't actually run this one as a genuine test. Direct-final submission specifically means submitting after the 4 October soft deadline has passed, so no feedback is given, but before the 18 October hard cutoff, so it still counts toward a pass or fail grade. As of today, 26 September, we're still before the soft deadline, so anything I submit right now is unavoidably a formative submission rather than a direct-final one.

- This is a real scheduling constraint rather than a gap in effort. Reaching this state properly means either waiting around eight days for the calendar to pass 4 October, or having a Teacher temporarily move the Assignment's dates forward and back to simulate it.

- I'd suggest either revisiting this specific test case after 4 October using the same file and account, or, if the team wants it confirmed sooner, checking with Reshan or Aryan whether it's alright to temporarily shift the Assignment's dates for a controlled test and then restore them afterward.

I've recorded this as an open, deferred item below rather than marking it pass or fail.

6. Extensions

I didn't re-test extension handling live myself this round. I'm treating it as already verified through Reshan's own Task 48 evidence, which is visible directly in this course's live data. The Assignment submissions table (see Fig. 14 in my Task 49 report) shows Reshan's account with an extension granted until 22 October correctly applied to his submission record, matching his documented test of extending his own deadline from 18 to 22 October.

7. Returning-Learner Behaviour

I checked this at two levels:

- Workshop completion persistence: I marked Module 1's Workshop as Done, switched away and back through the Teacher and Student views on a fresh page load, and the Done status was still there. See Figures 2 to 4 in my Task 49 report.
- Assignment submission persistence: after working all the way up to the three workshop state and navigating through several other pages, I reopened the Final Assignment and my original formative submission, the file, the status, and the timestamp, was all still exactly where I'd left it. See Section 5 of my Task 49 report.

Both of these confirm that completion and submission state hold up across navigation and role view changes within the same testing session. I didn't separately test a genuine cross-session return, meaning logging out and back in on a different day, this round.

8. Re-testing the Week 2 Fixes

Two of the three defects I originally reported against Reshan's earlier template (on the MoodleCloud test site) were already confirmed fixed back in the Sprint 2 Week 1 cross test. The third one, the lack of any workshop-attendance gating on the Assignment, is exactly what Reshan's Task 47 work was meant to fix, and my testing above confirms it now works correctly across every workshop-count state I was able to test live.

9. Issues, Re-tests and What's Still Outstanding

#	Test Case	Result	Notes
1	Module 2 and Module 3 workshop description fields both read "Module 1 workshop"	Open	Cosmetic only, doesn't affect the actual gating logic. To raise with Reshan.
2	Direct-final submission, after the soft deadline, can't be tested right now	Deferred	Blocked by the real calendar (today is 26 September, soft deadline is 4 October). Worth re-

#	Test Case	Result	Notes
			testing after 4 October, or with a temporary date change on the Teacher side.
3	Course Grader report stuck on "Recalculating grades" (see Section 7.1 of my Task 49 report)	Blocked	Needs Site Administrator access to fix. Doesn't block any test case in this report, since the Assignment level submission views work fine.

10. Summary

Out of the 12 checklist items for this task, 9 are fully confirmed with either direct evidence or evidence independently backed up elsewhere: the zero and one workshop lockout, two different two of three combinations, the full three of three state, formative submission, extensions, returning-learner and completion persistence, and re-testing the Week 2 fixes. One item, the incomplete module with enough workshops done, turned out to be ruled out by the design itself rather than something I tested directly, which I think is still a valid result. The last item, direct-final submission, is genuinely deferred until the real 4 October deadline passes, rather than something I tried to force through with a workaround. I didn't find any blocking defects in the actual gating or submission logic. The two open items I've logged, the cosmetic description text and the scheduling constraint, don't affect whether the workshop and assessment system itself is working correctly.
