

Template Build Review

Made by: Walaa Ghanduri, UX designer

Date: 25th of September 2026

Disclaimer: currently the team does not have site access therefore the fixes for each category will be split into two parts; the fix that can be implemented at the current moment and the site access fixes that would need to be fixed once the access has been granted.

Course Home Review

The features that are implemented correctly and work as intended:

- The course page lands on the 'General' tab.
- There are progress indicators that turn green (initially they were grey in the mock-ups, however, the green seems to be adding a clearer way of indicating completion therefore we can keep them).
- The lock icon for accessibility
- The course title
- The addition of the announcements tab

Improvement/fixes based on current access (lack of site access):

- Instead of calling the tab teaching team we can name it 'Course Facilitators'.

Improvements/fixes based on future site-access:

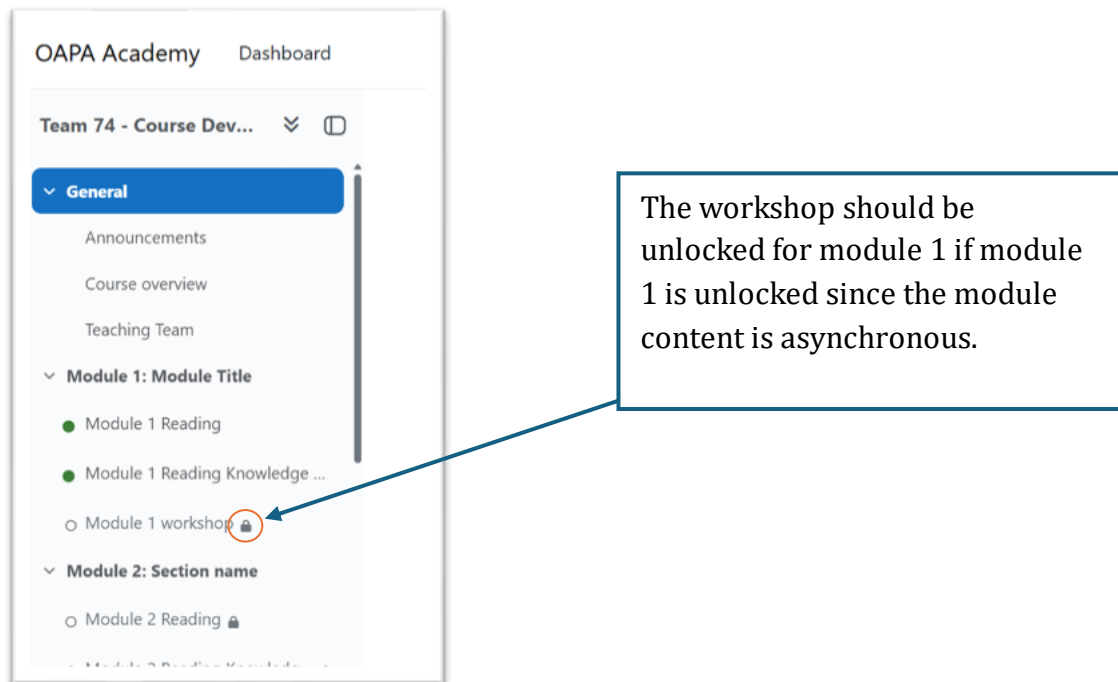

- The OAPA branding based on the previous mockups.
- The secondary navigation; shift it up, remove the 'Activities' tab and add the 'Quizzes' and the 'Assignments' Tabs.
- The left navigation bar that shows which tab the user is currently on, should be changed from blue to black.

- The navigation on the middle of the page (main content section) should be removed.

Left Navigation Panel Review

The modules on the left navigation panel improvements:

1- When the user lands on the page, Module 1 should be **unlocked by default**.

Since the viewing of the module is asynchronous, all the tabs of a specific module should be unlocked for the user once the module is unlocked. **Module 1 is always unlocked**, since it is the first module in every course, by default once the user lands on home page of the course, it should be automatically unlocked.

2- The rest of the modules, however many the course creator decides to make (in our case we assume three), the Module is unlocked only when the user completes the quiz in the previous module. So, to recap:

- Module 1: always unlocked
- Module 2: Unlocked once module 1 quiz is completed with a specific grade (lets initially make it 80% and then check in with the client about this).
- Module 3: Unlocked once module 2 quiz is complete with a specific grade.

- Module 4: Unlocked only when the course facilitator unlocked it for the user once they confirm that the student has attended at least 2/3 workshops.

3- The progress indicators need to be green when the user marks it as done themselves so that they can save their progress and use it as a bookmark. This feature needs to be further tested to see if it best to keep it as self-progress check or automatically check if the user has been on the tab and it turns green once they scroll through it to the bottom of the page.

4- The tabs or bars under every module need to follow this structure:

The quiz tab for every module has to be the last tab not the workshop.

5- Module 4 needs to be clearly titled.
