Provisional Learner Journey – Map

Provisional Learner Journey

1- User login and Course Selection

The learner/user journey starts with the user logging into their account. Then the user is taken to the dashboard where their courses are shown. This learner journey assumes that the user is completing their third foundations module, which is part of the foundations course, and one third of the Graduate Certificate at AQF level 8.

All modules in the three courses: foundations, intermediate and final, assume the same learner journey. Every end of a course unlocks the next, and only when the user completes the third module in the 'final' course is when they will be granted the certificate and the certificate is set to 'complete'.

The courses in the dashboard page are assumed to be the overall course, in this case the Graduate Certificate, once the user clicks on the course then each layer is accessible one at a time.

The user clicks on the available course, in this case the user has already completed the first two foundations courses, and they are shown in the system for the admins, teaching staff and the user as complete.

2- First three months in each course

The months 1-3 run on the same cycle:

- Content: 10-hour modules + one live 1–3-hour session per month
- An assessment criterion: at the end of each month that lets the users confirm their knowledge and move on to the next

3- The fourth and last month of each course

The last month of each course would be the fourth month, and it is the assessment month. In this month the number of assessments is unknown at this stage, however the users will have two deadlines: a soft deadline and a hard deadline.

- Soft deadline: the users will receive feedback for their work from peers; this process is iterative and involved many users to interact together.
- Hard deadline: the users will receive both feedback and a final grade.

Once the requirements are met, the user will have the specific course (foundations 3) marked as complete in the system, before then it was in progress.

UX Principles

The UX principles are derived from the provisional learner journey and map:

- 1- Progressive disclosure and staged unlocking
- 2- Transparent structure and wayfinding
- 3- Predictable rhythm for the months and courses
- 4- Real time status visibility
- 5- Layered and clearly differentiated feedback loops
- 6- Accessibility and inclusivity
- 7- Error prevention
