

Sprint 2 Week 1 Independent Cross-Test

Course Structure and Sequential Progression - Built by Reshan (Dev 1)

Prepared by Shaikh Zarin Tasnim (Dev 2) - Team 74, OAPA Editor Academy

1. What I Tested

For this task I independently cross-tested the new course structure and sequential progression that Reshan built for Sprint 2, in the course "Team 74 - Course Development". Rather than looking at it as Teacher, I used Moodle's Switch role feature to view and interact with everything as a Student would, then followed the full learner journey from the course home page through all three modules and the final assignment.

2. Switching to Student View

The course gives a choice of Non-editing teacher, Student, or Guest when switching roles. I picked Student, since that's the actual audience this structure needs to work for.

Switching role to Student before starting the test.

Once switched, the role shows clearly in the top corner, and I landed on the Announcements page inside the General section with no issues.

Course Home and General section navigation confirmed working from Student view.

3. Module 1

I opened Module 1 Reading and marked it Done.

Module 1 Reading, marked Done as a student.

Back on the Module 1 section page, the Knowledge Check had switched to "To do" and was now available, but the workshop was still locked. The lock message says: "Not available unless: You achieve higher than a certain score in Module 1 Reading Knowledge Check."

Knowledge Check unlocked after the Reading; the workshop stays locked behind a score condition on the Knowledge Check.

I attempted the Knowledge Check and got a perfect score, 4 out of 4.

Module 1 Reading Knowledge Check completed with a perfect score.

With a perfect score, the workshop unlocked right away, no refresh or re-login needed.

All three Module 1 activities now show as Done or available, workshop no longer locked.

I opened the workshop and marked it Done. It's currently sitting in Setup phase, with a message telling students to wait until it's switched to the next phase. I'm not counting this as a defect, since this is expected while the workshop itself is still being built out, Reshan's task was to configure the course structure and progression, not to fully build out the workshop's own content yet.

Module 1 workshop, currently in Setup phase, marked Done as a student.

4. Testing the Passing-Grade Threshold (Modules 2 and 3)

Modules 2 and 3 use the exact same structure as Module 1, so instead of repeating every step, I used them to specifically test what happens with different scores, since the Knowledge Check's completion requirements just say "Receive a passing grade" without ever stating what that passing grade actually is.

On Module 2's Knowledge Check, I intentionally selected a wrong answer to test a failing attempt, and scored 0 out of 4. It did not count as passing, and the next activity (the Module 2 workshop) stayed locked.

A failing attempt on Module 2's Knowledge Check, 0 out of 4.

On Module 3's Knowledge Check, I got a mixed result of 2 out of 4. This also did not count as a pass, and the workshop stayed locked.

A partial attempt on Module 3's Knowledge Check, 2 out of 4, still not enough to pass.

Based on this, it seems nothing less than a full 4 out of 4 actually counts as passing, since neither 0 nor 2 out of 4 unlocked the next activity, and only my earlier perfect score on Module 1 did. This isn't stated anywhere in the activity itself though, the student only sees "receive a passing grade" with no number attached, so there's no way to know in advance that full marks are required. This is worth Reshan either lowering the pass mark if 100% wasn't intended, or if it is intended, adding the actual required score into the activity's description or restriction message so students aren't left guessing.

5. Assignment

The final Assessment section has one Assignment. I uploaded a test image file to check the submission process actually works end to end.

Uploading a test file to the Assignment as a student.

After saving, the submission status correctly updated to "Submitted for grading", with the file and submission time recorded accurately, and it also confirmed the assignment was submitted well ahead of its due date.

Assignment submission correctly recorded as Submitted for grading.

6. Progress Tracking and Returning to Completed Work

Throughout the test, a green dot appeared next to every activity in the sidebar as I completed it, so progress tracking is visible and accurate at every stage, not just at the end. Going back into an already completed activity, like re-opening Module 1's Knowledge Check afterward, correctly still shows it as Done, with both completion requirements checked off, and the

activity's own Attempts report tab is right there, which is useful for later checking learner attempt history.

Revisiting Module 1's Knowledge Check afterward, still correctly showing as Done.

7. H5P Working Correctly in This Course

Worth noting on its own: every Knowledge Check in this course uses H5P, and none of them showed the invalidcontextid or missing-library errors I ran into on the other real OAPA course earlier. H5P worked properly here across all three modules with no issues at all. So whatever is causing those earlier errors is specific to that other course, not a problem with H5P on the OAPA Academy site as a whole.

8. Defects and Observations

Item	Type	Assigned To
The Knowledge Check's required passing grade is never shown to the student, only "receive a passing grade" with no number, and testing suggests it may require a full 100%	Signposting/clarity defect	Reshan (Dev 1), course structure owner
Module 1 workshop is still in Setup phase, not yet progressed to Submission	Expected in-progress build, not a defect	N/A, flagged for awareness only

Everything else, navigation, progression between all three modules, locking and unlocking, the assignment, and progress tracking, worked correctly with no defects found.

9. Summary

Reshan's Week 1 course structure and sequential progression work correctly end to end as a student. Navigation and signposting are mostly clear, with one real gap: the passing grade

requirement on the Knowledge Checks is never actually disclosed to the student, which should be fixed either by lowering the threshold or stating it clearly. The workshop's Setup phase is expected at this stage, not a defect. H5P itself works without issue in this course, which is a useful, separate data point from the platform errors seen on the other real OAPA course.
