Team 74, Sprint 3, Week 3, Task 89

Final Technical Decisions, H5P/Quiz, Participants, Hardening and Known Issues Handover

Name	Shaikh Zarin Tasnim, Developer 2
Project	Building an Editor Academy Moodle platform (Team A)
Date	27 October 2026
Environment	Local Docker Moodle 5.3 (Build 20261005), same version as Reshan's release. Final course restored from Reshan's backup of 27 Oct (backup-moodle2-course-2-test_Course_1-20261027-1117.mbz) as course 6.

Summary

This is my final technical handover. It explains why I built things the way I did (branding, navigation, Participants, H5P and the quiz fallback, dark mode and the phone fixes), what OAPA should check when the template goes onto their hosted Academy, and which issues are still open and who owns each one.

Before writing it I restored Reshan's final backup from 27 Oct and ran my tests on it again. The unlock rules worked for all 8 test students, and D1, D2 and D3 from Week 1 are fixed in the release. I did find three new small issues (D11 to D13). Two earlier fixes also didn't make it into Reshan's backup (my D7 wording and the Module 4 name). They're all in section 6.

Check	Result
Final backup restores on a clean copy of the same Moodle version	Pass (without user data, see 1.1)
Unlock rules for Modules 2, 3 and 4 (8 test students)	Pass, all 8 as expected
D1 Module 4 rule now checks the quizzes as well as the workshops	Fixed, confirmed
D2 Final Assignment allows a second attempt	Fixed, confirmed (2 attempts, reopened by the teacher)
D3 Marking workflow on	Fixed, confirmed
Branding, tabs and Participants script on the new course	Applied site wide, nothing course specific to change
Open issues with owners	Section 6

1. Final check on the release course

1.1 Restore

The first restore, using Moodle's normal command line restore, stopped with "awaiting required settings". The precheck said the backup has users in it, and that the user "admin" would clash with the admin already on my site. So I restored it again with user data turned off. That's how a new OAPA course would be set up anyway, since students get enrolled fresh for each run. The course, its 16 activities, the unlock rules, the attendance sessions and the grade items all came across fine.

Note for Reshan and OAPA: if a backup is meant to be reused, it's best made with "Include enrolled users" turned off. Otherwise anyone restoring it on another site will hit the same error unless they untick users on the restore screen.

1.2 What changed in the release since my Week 2 tests

- Module 2 now needs the Module 1 Reading, Activity and Workshop done and the Module 1 Quiz at 80% or more. Module 3 is the same for Module 2.

- Module 4 needs full attendance in any 2 of the 3 workshops **and** all three quizzes passed. This is the D1 fix.
- The Module 3 Quiz is now a native Moodle quiz (6 marks, pass 5) instead of H5P. Modules 1 and 2 still use H5P.
- Final Assignment: 2 attempts, reopened by the teacher, marking workflow on (D2 and D3 fixes).

1.3 Gate check

I enrolled teacher1 and 8 test students in the course. Attendance was recorded through the Attendance plugin's own records and grade update (P = 2, L = 1, E = 1, A = 0), quiz grades were written with Moodle's grade API, and completion was then worked out by Moodle itself. I then asked Moodle what each student can open. Scripts: setup6.php and gates6.php.

Student	Modules done, quizzes passed	W1 / W2 / W3	Module 2	Module 3	Module 4	Expected
s0none	none	- / - / -	locked	locked	locked	Yes
s1only	1	P / - / -	open	locked	locked	Yes
s2w12	1, 2	P / P / -	open	open	locked	Yes. 2 workshops but Module 3 Quiz not passed (D1 fix)
s2w13	1, 2, 3	P / A / P	open	open	open	Yes
s2w23	1, 2, 3	A / P / P	open	open	open	Yes
s3all	1, 2, 3	P / P / P	open	open	open	Yes
s2late	1, 2, 3	L / E / A	open	open	locked	Yes. Late and Excused are 50%, the rule needs 100%
s1w3	1, 2, 3	A / A / P	open	open	locked	Yes. Only 1 workshop

Back in Week 2, s2w12 could open Module 4 without touching Module 3. In the release it stays locked until all three quizzes are passed, so D1 is fixed. Every student who could open Module 4 could also open the Final Assignment.

2. Technical decisions

Decision	Why
Moodle-native only. Boost theme with Raw initial SCSS, Raw SCSS, Logos, Brand colour and Additional HTML. No core code changes and no extra theme or plugin.	OAPA's hosted site is standard Boost and the task asked for Moodle-native features only. Settings survive Moodle updates and can be undone by clearing them. Everything is set by one script, `oapa-branding/apply.php`, in the Local-Moodle repo.
Logo 104 px top left instead of the Brand Book's 220 px bottom right.	Follows Walaa's approved mock-ups. Walaa approved it in her Week 2 audit (D9 closed). One SCSS variable, `$oapa-logo-width`, changes it.
Black and white only, with one green for completion.	Brand Book is black and white. Green for completion was agreed with the client. It is one colour variable (`--oapa-done`) and used nowhere else.
Light and dark mode through colour variables.	Client feedback. Every colour comes from a small set of light and dark values, so new screens follow both modes without extra work.
Quizzes and Assignments tabs instead of Activities, by editing the tab data before Moodle's tab script reads it.	Moodle has no setting for this and a plugin was out of scope. The tabs open Moodle's own activity overview filtered by type, so nothing new is stored.
Participants page built on Moodle's own table, search and download.	Matches Walaa's mock-ups without a plugin. Permissions stay with Moodle, so a student only sees Name and Role because Moodle does not let students see more. The script does not grant anything.
H5P Question Set kept, native Moodle quiz kept as the fallback.	H5P is what the client asked for and it saves grades and completion. The native quiz follows the theme fully and gives per-question reports in the Gradebook. Reshan has now used a native quiz for Module 3, so the release has both.
Module wording says what unlocks a module ("Unlocked by ...") instead of "Locked until ...".	The old text was wrong once a module opened (D7). Moodle's own restriction box shows while it is still locked.

3. H5P and quiz, final position

- H5P Question Set works for create, display, answer feedback, grade and completion (Task 70 tests 12 to 14). Grades go to the Gradebook out of 100 and the 80% pass opens the next module.
- Limits: the Gradebook keeps one grade per H5P activity, so staff open the H5P attempts report to see each question. H5P runs inside its own frame, so the site theme cannot style it and the Check button stays blue (D10).
- The native quiz is fully on brand in light and dark mode and is already used for Module 3 in the release. If OAPA wants every quiz on brand, the native quiz is the simplest route.

4. Participants and hardening, final position

- Students: Name and Role only, search, sort, pager. Teachers: tick boxes, Group, Last access, Users selected, Choose format and Download report (CSV tested in Task 80).
- Phones (390 px): no sideways scrolling, 16 px side margins, controls 44 px tall, the panel button does not cover the footer.
- Keyboard: 2 px solid focus outline on inputs and buttons, search and sort have labels. Outline buttons only fill on hover or keyboard focus, so each page has one filled main button.
- Tab row sticky at the top and at the same height on every course page. Left panel starts closed on Participants, Quizzes, Assignments and Grades.

The branding and scripts are set site wide, not per course, so the restored release course picked them up with no extra step.

5. Checks for the hosted Academy

Michael confirmed in the 27 Oct closeout meeting that the local release is the handover and moving it to OAPA's server is a follow-up if feasible (Aryan's Task 81 record). These are the things I'd check when that happens, based on what we know about the hosted site. My account there is only a Teacher account, so most of them need the OAPA admin. (Task 90 covers what actually happened when I tried this in OAPA's isolated environment.)

#	Check	Why	Who
H1	Moodle version is 5.3 or close to it, PHP 8.3, MariaDB 11.4 or higher	A backup cannot be restored on an older Moodle, and the tabs script reads Moodle 5's tab data	OAPA admin
H2	Attendance plugin (mod_attendance) installed	It was not installed on the hosted site when we checked. Without it the three workshops and the Module 4 rule do not restore	OAPA admin
H3	Restore with "Include enrolled users" off	Avoids the admin clash in 1.1	OAPA admin
H4	Paste the Raw SCSS, Raw initial SCSS and Additional HTML, upload the logos, or run `apply.php`	Site level settings, Teacher accounts cannot reach them	OAPA admin
H5	Google Fonts load (Newsreader, Archivo)	The fonts come from fonts.googleapis.com. If the site blocks outside files, the fonts need to be hosted on the site instead	OAPA admin
H6	Run `step2.php` with the new course id	Puts back the "Unlocked by ..." wording (D7)	OAPA admin or Zarin
H7	Re-run the gate check (section 1.3) with a few test students	Confirms the unlock rules point at the new course's own activities	Zarin, with a test account
H8	Open one H5P quiz as a student and finish it	H5P needs the H5P libraries on the site. If they are missing, use the native quiz	Zarin
H9	Set new dates for the workshops and the Final Assignment	The release still has the October test dates (D6, D12)	Course facilitator

6. Known issues and technical debt

ID	Issue	Owner	Status
D1	Module 4 rule only checked workshops	Reshan	Fixed, confirmed in the release
D2	Final Assignment allowed 1 attempt only	Reshan	Fixed, confirmed
D3	Marking workflow off	Reshan	Fixed, confirmed
D4	Attendance override looks like real attendance	Reshan, Riley	Open, not re-checked in this task
D6	Workshops dated Sat 10 Oct 12:00 AM with 0 minutes length	Reshan / facilitator	Open, still in the release
D7	"Unlocked by ..." wording is not in the release. Module summaries are empty in Reshan's backup	Zarin	Fix ready: run `step2.php` with the course id (H6)
D8	Modules still called "Module N: Section Name", Module 4 is "Module 4: assesment"	Content owner	Open
D10	H5P Check button blue	OAPA admin	Known limit. H5P custom styles setting, or use the native quiz
D11 (new)	The workshops use manual completion, and Modules 2 and 3 need the previous workshop ticked as done. A student has to tick the workshop themselves to move on, even though attendance is meant to be marked by the teacher. A student who missed a workshop can still tick it.	Reshan	Open, low. The Module 4 rule is not affected because it uses the attendance grade. Fix: take the workshop out of the Module 2 and 3 rules, or set workshop completion to "receive a grade"
D12 (new)	Final Assignment dates: due 4 Oct, cut-off 18 Oct 2026, both already past	Facilitator	Set new dates per course run (H9)
D13 (new)	Workshop grade items are not the same: W1 out of 2 (pass 2), W2 out of 100 (pass 100), W3 out of 100 (pass 0)	Reshan	Low. The rule uses percentages so it still works, but the Gradebook looks inconsistent to staff

Technical debt

- The tabs script and the Participants script depend on how Moodle 5.3 builds those pages. After a Moodle upgrade, check the Participants page and the course tabs first.
- Fonts load from Google (H5). Hosting them on the site would remove the outside dependency.
- Task 80 screenshots of Participants show the old Activities tab, because they were taken before the tab change.
- H5P styling can only be changed through H5P's own custom styles setting, not the theme.

7. Handover

- Code: S4090860/Local-Moodle, folder `oapa-branding` (apply.php, oapa.scss, oapa-pre.scss, head.html, footer.html, step2.php, logos). README has the manual steps.
- To apply: run `php oapa-branding/apply.php` from the Moodle folder. To undo: clear Raw SCSS, Raw initial SCSS and Additional HTML.
- Reshan: D4, D6, D11, D13. Content owner: D8. Facilitator: new dates (D12). OAPA admin: H1 to H5 and D10.
- Me: H6 to H8 on the hosted Academy once it's set up.
