UX Branding and Navigation Audit

Walaa Ghanduri – UX Designer

Date: 18th of October 2026

Summary

This report is based on the development done by the Developers Zarin and Reshan on the Moodle reusable template. The audit is to ensure that the branding and navigation is developed correctly and according to the requirements and designs.

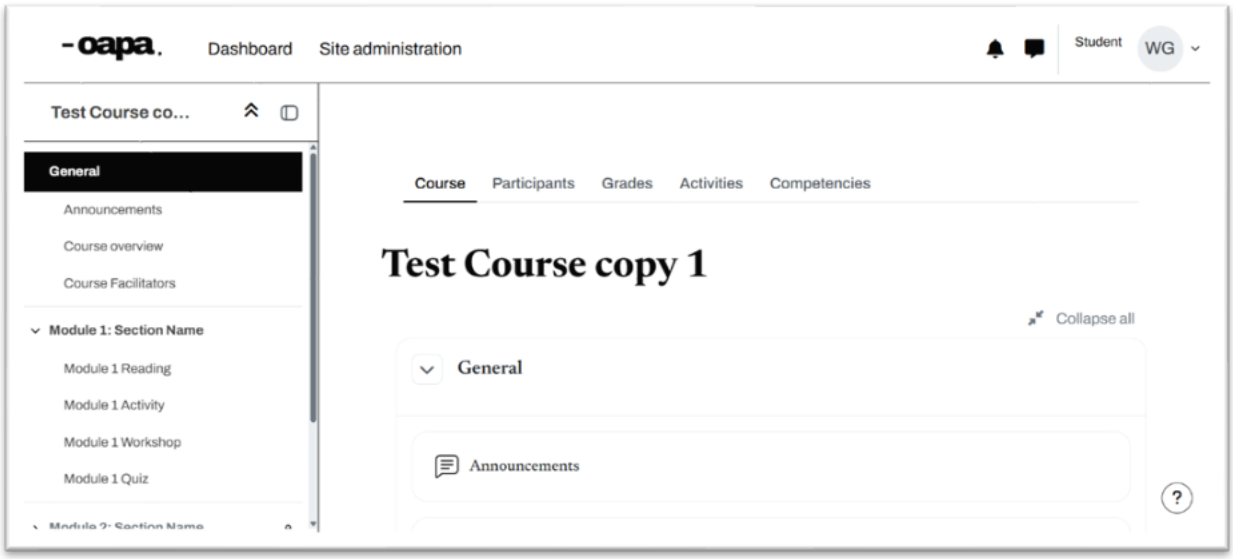

Methodology

The course template will be audited based on branding and navigation, and for each category, the user and facilitator perspectives will be considered. Findings are informed by Nielsen's usability heuristics, laws of UX, the OAPA Branding book, and client requirements. The OAPA official website will also be considered.

- Branding: ensure that the branding is consistent for both users and facilitators
- Navigation: ensure that navigation is consistent for the users

Branding

1. The landing page

The course template landing page from the user perspective.

- The OAPA logo is implemented neatly
- The left navigation visibility of system status bar is correctly changed from blue to black to accommodate for the brands official colours

- The left navigation bar is white instead of grey from the mock-ups due to client requesting only white and black
- Overall, the colour scheme matches the branding colours and the fonts

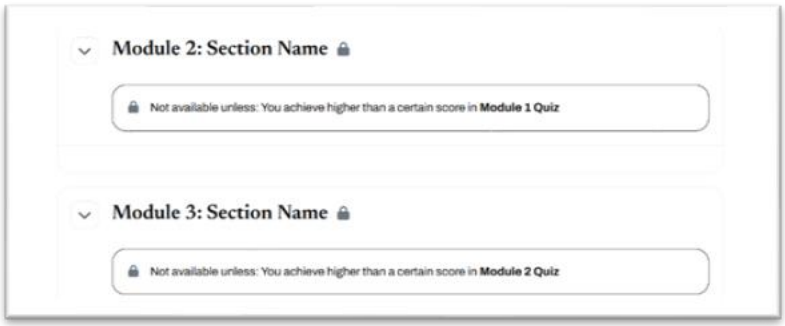

The landing page is correctly implemented and matches all requirements in terms of branding.

2. The icons colour

The icon colours change from multiple colours to black to suit the user requirements.

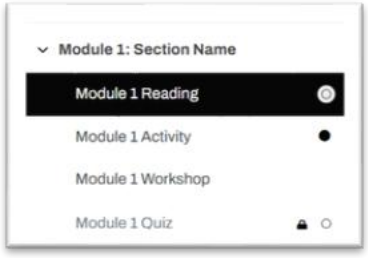

3. The locked state messages

The locked state messages are clear, and neat. The boarder matches the OAPA branding

4. The completion indicators

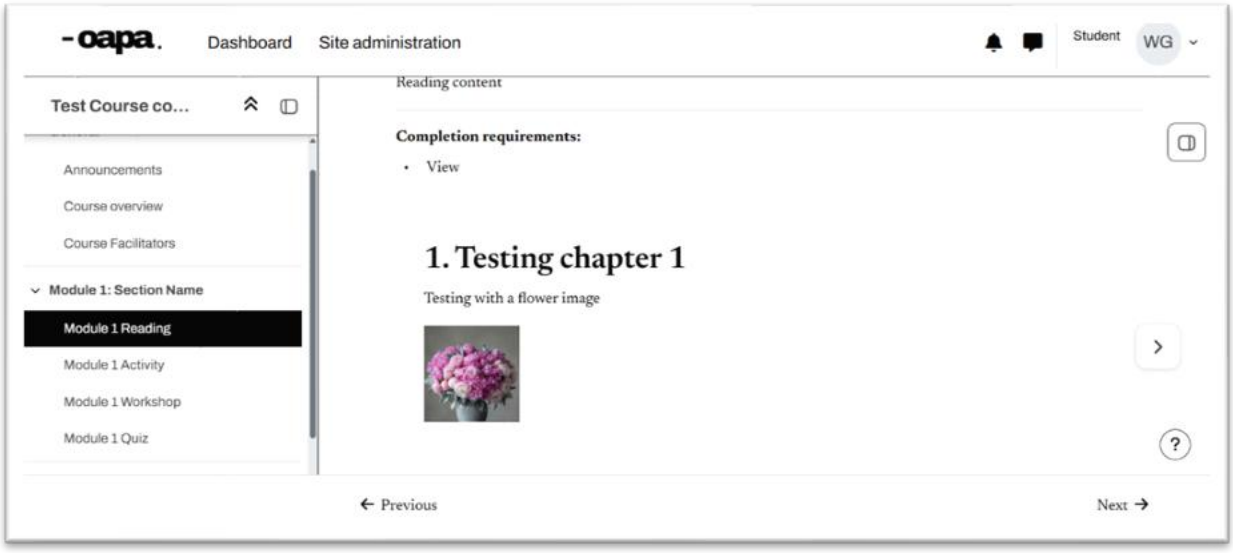

The competition indicators change colour to black when it is completed however, it should turn green instead as agreed with in the client meeting. This relates to visibility of system status and helps the users easily know when their status in the module.

5. Images

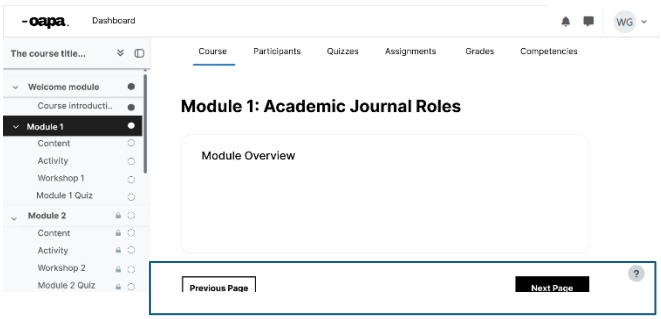

After testing the images in the content area, it shows that the facilitator can add images and the colour remains.

6. The navigation buttons between tabs

When it comes to bottom 'previous' and 'next' buttons, they appear at the bottom of the page as a sticky bar. The improvements that can be made to make them match the branding is to match them to the mock-up designs which was inspired by the OAPA website:

Navigation

In the course template we have five main navigation forms:

1. Left panel course navigation

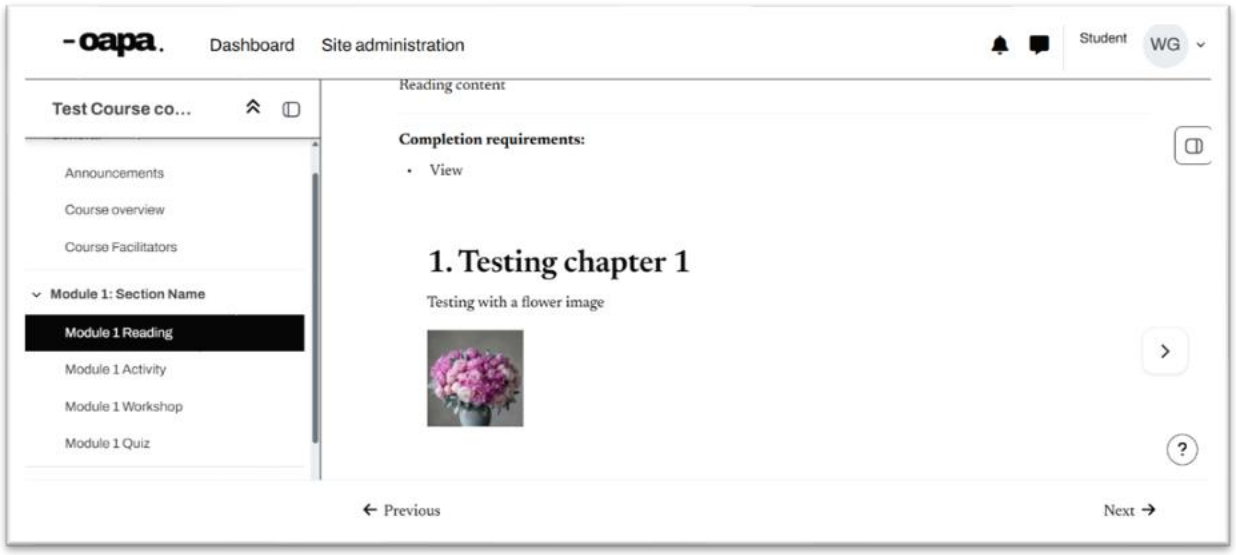

2. Secondary horizontal navigation

3. Once in a tab such as 'Module 1 Reading' there is breadcrumbs navigation

4. The 'next' button to navigate to the next reading page

5. The 'previous' and 'next' buttons to navigate to the previous and next bars in the module, such as from readings to activity

Overall, navigation 1, 2, 3 and 4 are implemented well and according to the acceptance criteria, the 5th navigation needs to be fixed:

Recommended fixes:

- Remove the sticky bar at the bottom of the page covering the entire page
- Replace the navigation method with buttons as shown in the mock-up designs
