Team 74, Sprint 3, Week 2, Task 80

Participants, Responsive and Technical Quality Hardening Evidence

Name	Shaikh Zarin Tasnim, Developer 2
Project	Building an Editor Academy Moodle platform (Team A)
Date	18 October 2026
Environment	Local Docker Moodle 5.3, "Test Course" (course 2) and its restored copy (course 4). Test accounts: teacher1 and seven students.

Summary

I rebuilt the Participants page to match Walaa's two mock-ups (student and teacher) using Moodle's own participants table, then checked it on desktop and phone in light and dark mode. I also rechecked the H5P quiz and the native quiz fallback, and checked that backup and restore keeps the course and its unlock rules. Everything passed. The one rule problem I saw (D1) is Reshan's and was fixed on the shared site in Task 78.

Check	Result
Students see only Name and Role	Pass
Teachers see tick boxes, Group, Last access and the download row	Pass
Search by last name or email (both roles)	Pass
Download report (CSV)	Pass
Desktop and phone, light and dark	Pass
H5P quiz and native quiz fallback	Pass
Backup and restore	Pass, 23 of 23 checks the same
Progression, workshop and assessment rules	Same as Week 1. D1 fixed by Reshan, to re-check

1. Participants page

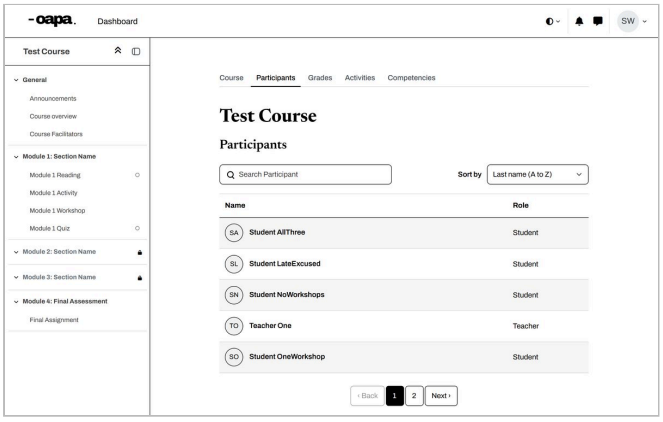

The page uses Moodle's own table, search and download. A short script in Additional HTML only rearranges it to match the mock-ups:

- **Search:** one "Search Participant" box. It searches by name or email using Moodle's keyword filter, so it also finds people on other pages.
- **Sort by:** last name or first name, A to Z or Z to A.
- **Pager:** Back, page numbers and Next.
- **Teachers only:** "Users selected", "Choose format" and "Download report", which uses Moodle's own download.

Visibility follows the user's role. A student only gets Name and Role and cannot select or download anything, because Moodle does not give students those permissions. The script does not grant anything new. Email is hidden from the table for teachers to match the mock-up, but it is still searchable and included in the download.

Student

Teacher

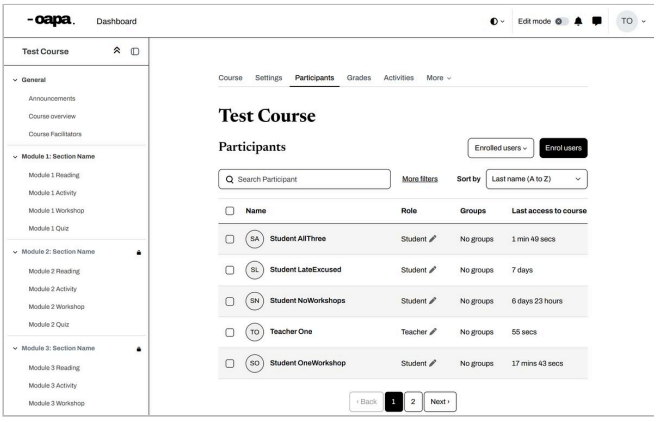

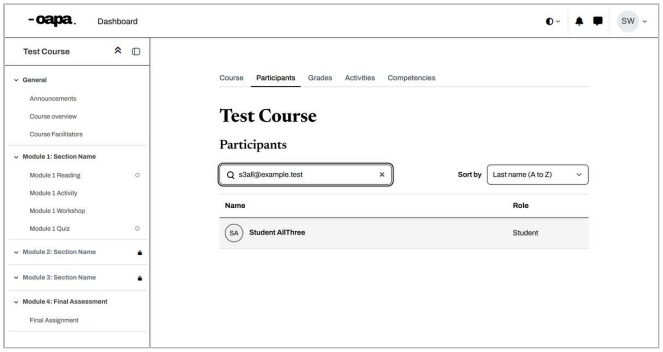

Figure 1. Student view (mock-up 111111) and teacher view (mock-up 2222222).

Student searching "s3all@"

Student searching a last name

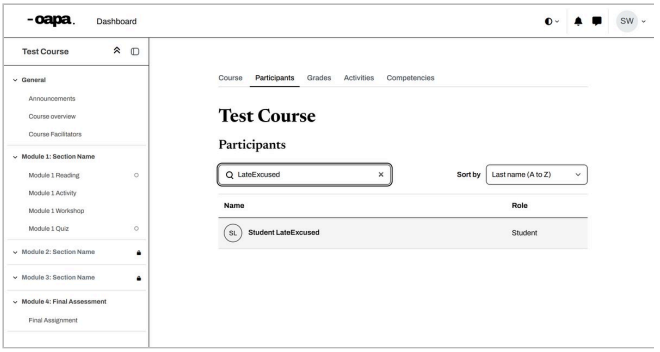

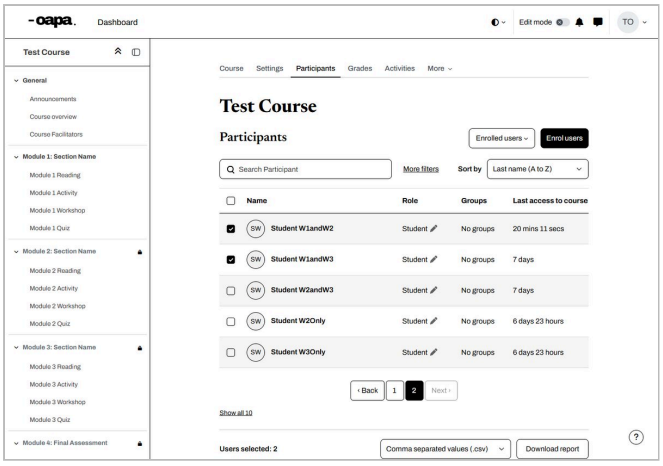

Figure 2. Search works by email and by last name for a student.

Teacher with users selected

No match

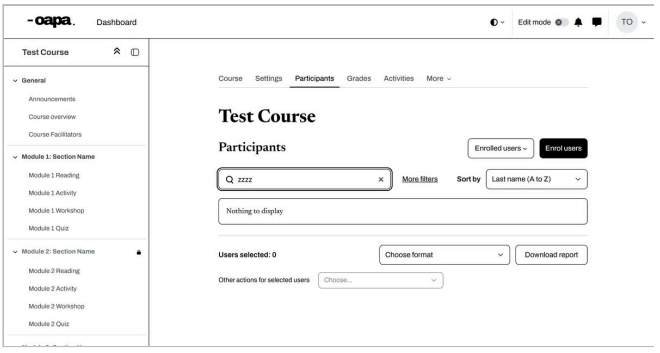

Figure 3. "Users selected" counts the ticks. A search with no match shows Moodle's empty message.

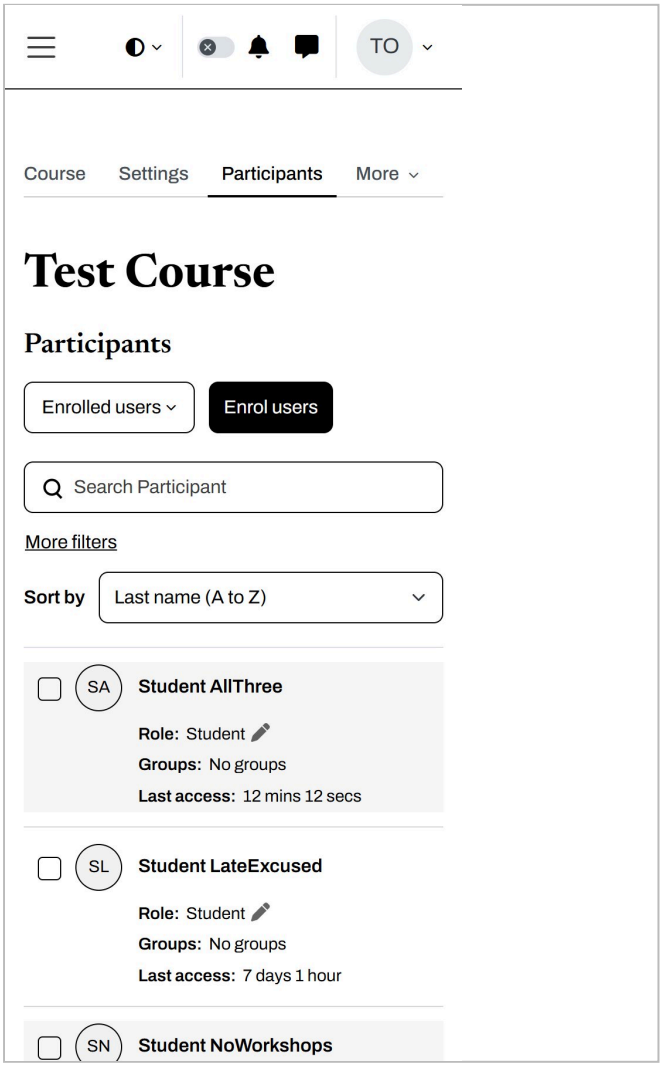

I tested the download as teacher1: ticked two students, chose CSV and clicked Download report. The file (evidence/task80/shots/courseid_2_participants.csv) had first name, last name, email and groups for those two. With nothing ticked or no format chosen it shows a short hint instead.

2. Desktop and phone

At 390 px the search, sort and download controls stack full width, the table rows stack, and nothing scrolls sideways. I measured these values with a script for teacher1 and s2w12:

Check	1440 px	390 px
Sideways scroll	None	None
Side margin	Content column	16 px
Search, sort, pager height	44 px	44 px
Focus outline	2 px solid	2 px solid
Student columns	Name, Role	Name, Role

Teacher, phone, light

Student, phone, dark

Teacher, dark

Student, dark

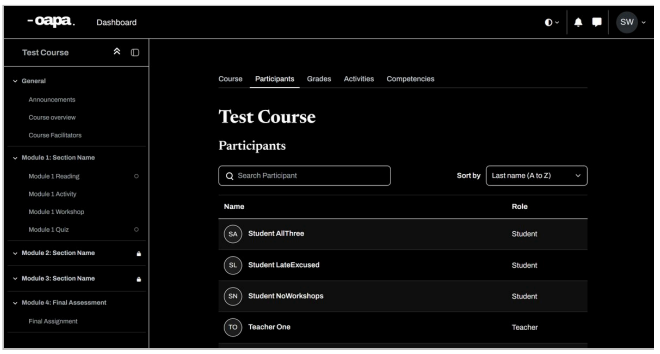

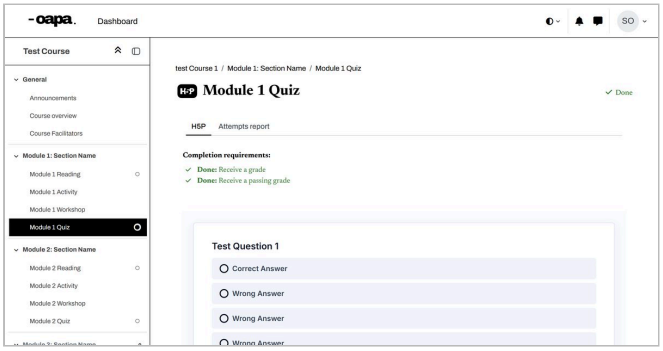

Figure 5. Dark mode on desktop.

3. H5P Question Set and native fallback

The three H5P quizzes still have grade out of 100, pass mark 80 and tracking on. The Module 1 quiz has 6 saved attempts in the log, so grades are being saved. Its Check button is still blue because it is inside the H5P iframe (D10).

As a fallback I added "Module 1 Quiz (native fallback)" to the restored course. It is a normal Moodle quiz with pass mark 80 and completion on passing. It follows the site theme in light and dark mode. If OAPA wants the quiz fully on brand, they can use this instead of H5P.

H5P quiz

Native quiz, dark

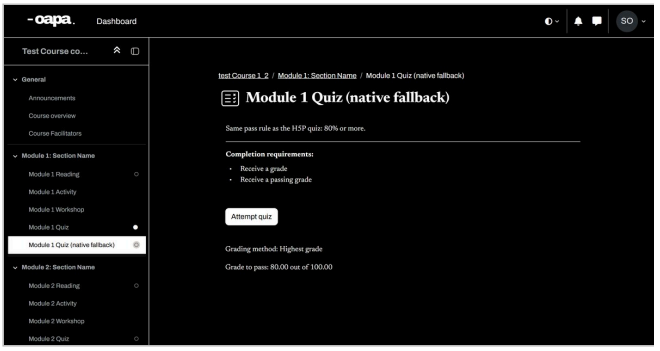

Figure 6. The H5P quiz keeps its own blue button. The native quiz is fully on brand.

4. Backup and restore

I compared the original course with the restored copy using a script (evidence/task80/checks/compare.php). It checks every section, its rule, each activity's completion and grade settings, and the attendance statuses and sessions. All 23 checks were the same. The only extra item in the copy is the native fallback quiz I added on purpose. The unlock rules in the copy point at the copy's own quizzes and workshops, not the original's, so the template works on its own.

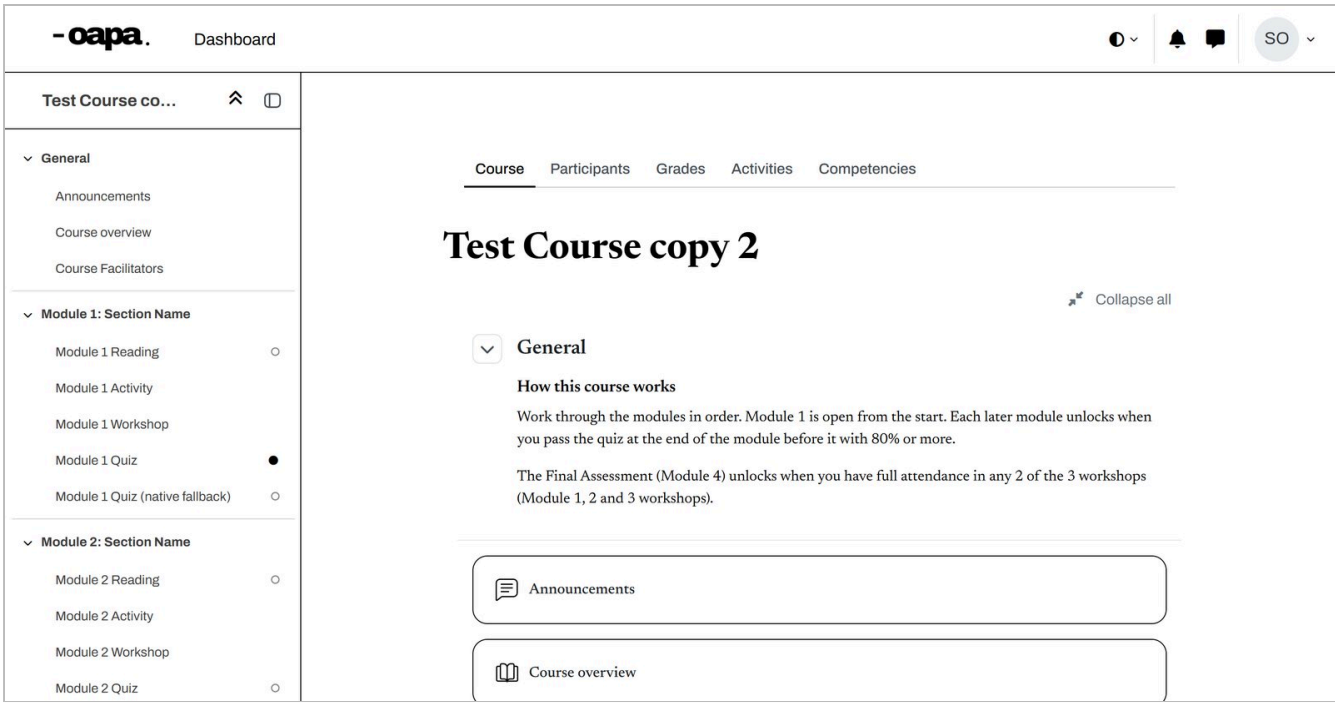

Figure 7. Restored course as s1only, with the same summaries and lock icons.

5. Progression, workshop and assessment rules

I ran the same gate check on both courses (evidence/task80/checks/gates-course2-original.txt and gates-course4-restored.txt). The results are the same in both and match Week 1. s1only opens Module 2 only. Students with full attendance in 2 workshops open Module 4. s0none and s2late stay locked. The one problem is D1: Module 4 opens while Modules 2 and 3 are still locked, because its rule only checks workshops. This is Reshan's setting and was fixed on the shared site in Task 78, but my local copy still has the old setting, so I will re-check it there.

6. What is left

My own items for this task are done. These are the ones that belong to other people:

- **Reshan:** D4 and D6 are still open. D1 to D3 were fixed in Task 78 and I will re-check them on the shared site.
- **OAPA admin:** paste the same Raw SCSS and Additional HTML on the live site, and H5P custom styles if they want the H5P button on brand.
- **Content owner:** real module names (D8).
