

Reusable Template Structure and Prototypes

Walaa Ghanduri – UX designer

Date: 17th September 2026

1. Module Structure

A module should be packaged as one, with the top tab being the **module overview page**. The page is where the user will land on at the start of the module. If the module is yet to be released, then the user will still have access to the module except it will have a **message** for them letting the users know that the page is not accessible yet.

The module set up will allow for 5 components; Module page specifying the module number and title and this expands to Content, Activity, Workshop and Quiz.

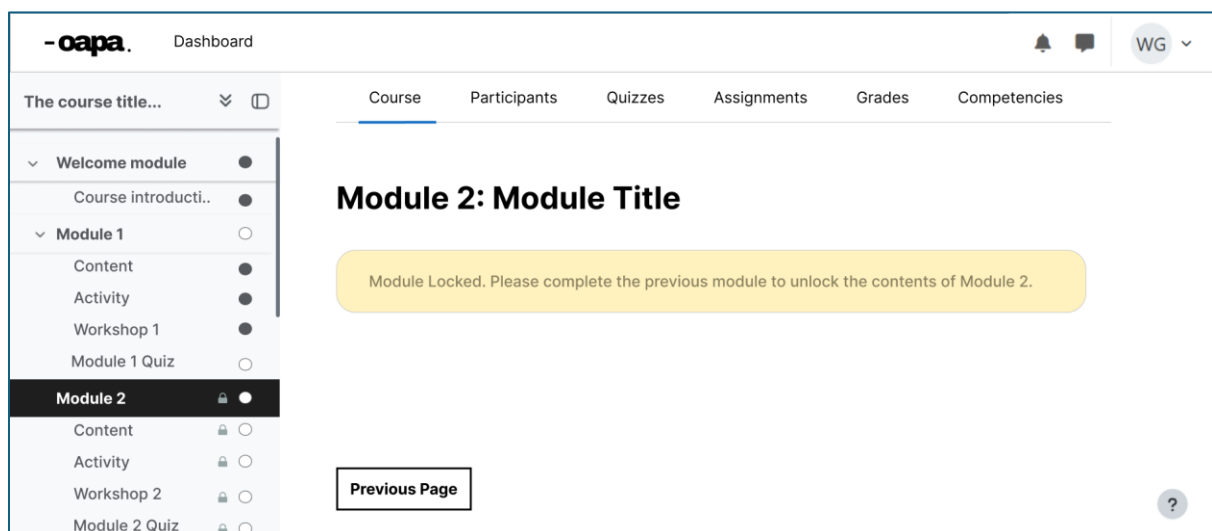

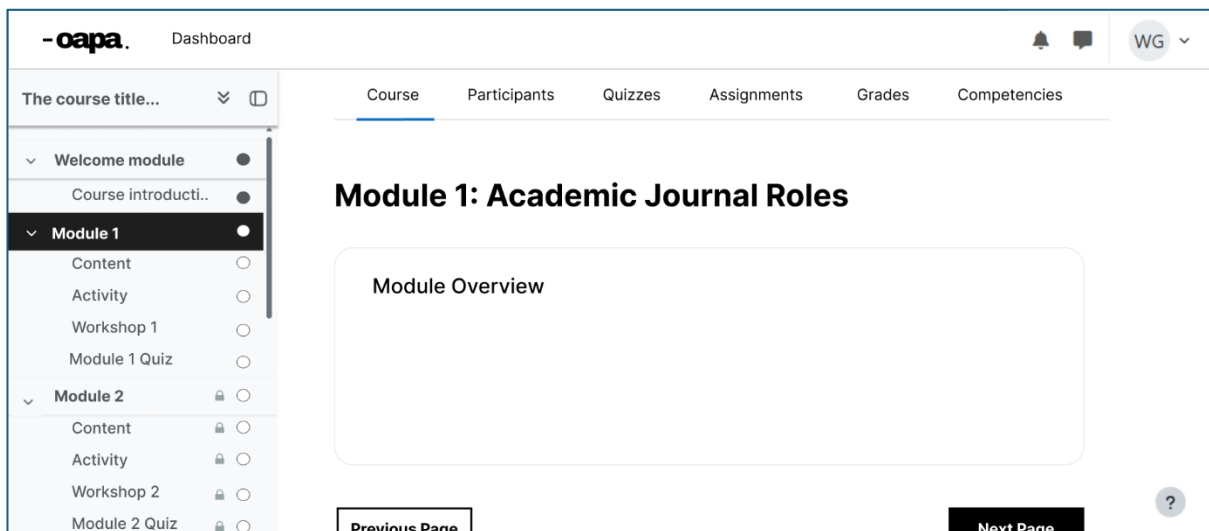

The module overview page, Workshop tab, and Quiz tabs are **mandatory** in every module. The content and activity tabs are optional; the course creator can have zero content or activity or as much as they want however they are an option to add. This leads us to the configuration of each of the pages:

- The **content** page will have plugins that allow for the display of images, the display of videos, linked content, documents, and anything content related. The plugins layout will have to suit the theme of OAPA, however the content in the plugin can be out of the theme specifications.
- **Activities** tabs can have all the plugins that the content page has except that it has additional ones, and they include any activity plug-ins, think HP5.
- The **workshop** tab is a feature that we will have to add as a feature as well. It is mandatory so the user will have to attend it and complete it so they can move on in the course. Every module will have one workshop tab, and the plugins used will include a live broadcast of the workshop or a link in which the user can join as well as the workshop resources and content.
- The **Quiz** will have a starting page, where the user can see their attempts, and once the quiz is started can only have specific plugins configured with the theme of OAPA.

1.1 Module Landing/Overview Page

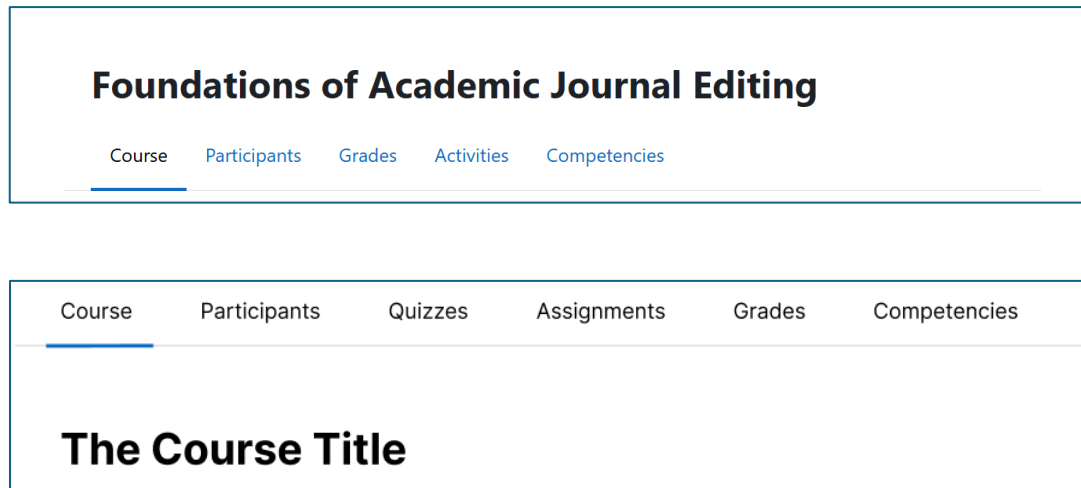

The module landing page will be an overview of the module. All the modules will have one. This is to eliminate the initial navigation for the module in the main content area. There will be plugins that allow the course creator to list down the overview and in case the module is locked still there will be a message letting them know that it is. Once the module is unlocked the overview will appear and the navigation that allows the user to move to the next page is enabled. Just to summarise the module landing page will have two versions depending on the user status:

- Unlocked landing overview page
- A locked one

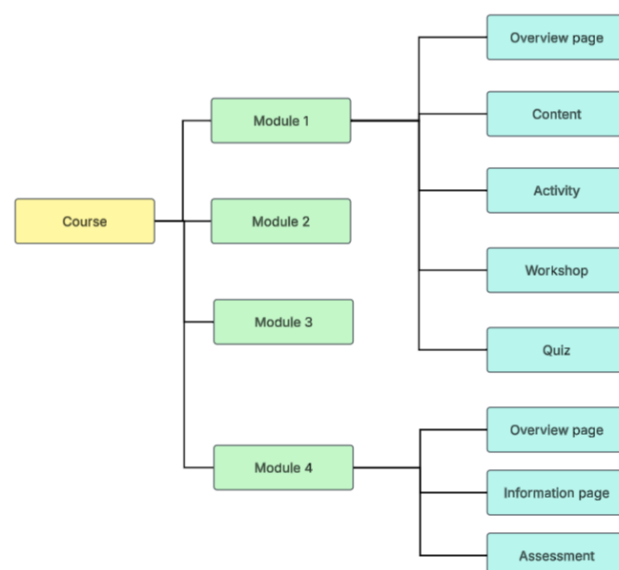

2. Secondary Navigation Tabs

In the course template we have two main navigations: left panel for the course content, and the secondary main navigation for non-content related and would call it 'course tools'. There has been changes to the initial look of that navigation:

The tabs titles have changed, instead of 'Activities' where everything from Quizzes, Assignments and content were listed, we replaced it with two tabs: 'Quizzes' and 'Assignments'. The second most important change is the position of the Navigation. It has been lifted over the course name and will be there when the user scrolls up.

2.1 Course
