Task 69: OAPA Branding and Navigation Implementation Evidence

Name Shaikh Zarin Tasnim, Developer 2

Team Team 74, Building an Editor Academy Moodle platform (Team A)

Sprint Sprint 3, Week 1

Date 11 October 2026

Environment Isolated local copy: Docker Moodle 5.3.0 from the team repo S4090860/Local-Moodle, Boost theme, Attendance plugin, "test Course 1" restored from Reshan's backup. Nothing was changed on the live Academy site.

Summary

I applied the OAPA branding, the two Brand Book fonts and the feasible navigation and accessibility changes from Walaa's UX handoff to our isolated Moodle copy. I only used Moodle's own settings (Appearance > Logos, Boost theme settings, Additional HTML) and normal teacher editing in the course. No core code or plugin was added.

After the changes I checked completion, restricted access, the workshop gate, the final assignment and the course template (backup and restore). All of them still work. Every page below has a before and after screenshot, and where Walaa made a mock-up of the page, the mock-up is shown too. Items that need an OAPA admin or code are listed in section 15 with the exact setting or capability.

Checklist overview

#	Checklist item	Result
1	Approved OAPA branding applied in the isolated environment	Done
2	Newsreader applied where specified	Done
3	Archivo applied where specified	Done
4	Black-and-white Brand Book treatment kept	Done (one small exception explained)
5	Signature/logo treatment	Done, follows approved mock-up, size deviation flagged to Walaa
6	Feasible navigation improvements from the UX handoff	Done
7	Participants/navigation use Moodle-native capability	Done
8	Accessibility corrections	Done (feasible items)
9	Site-level changes only in the isolated environment	Done
10	Course completion still works	Pass
11	Restricted access still works	Pass

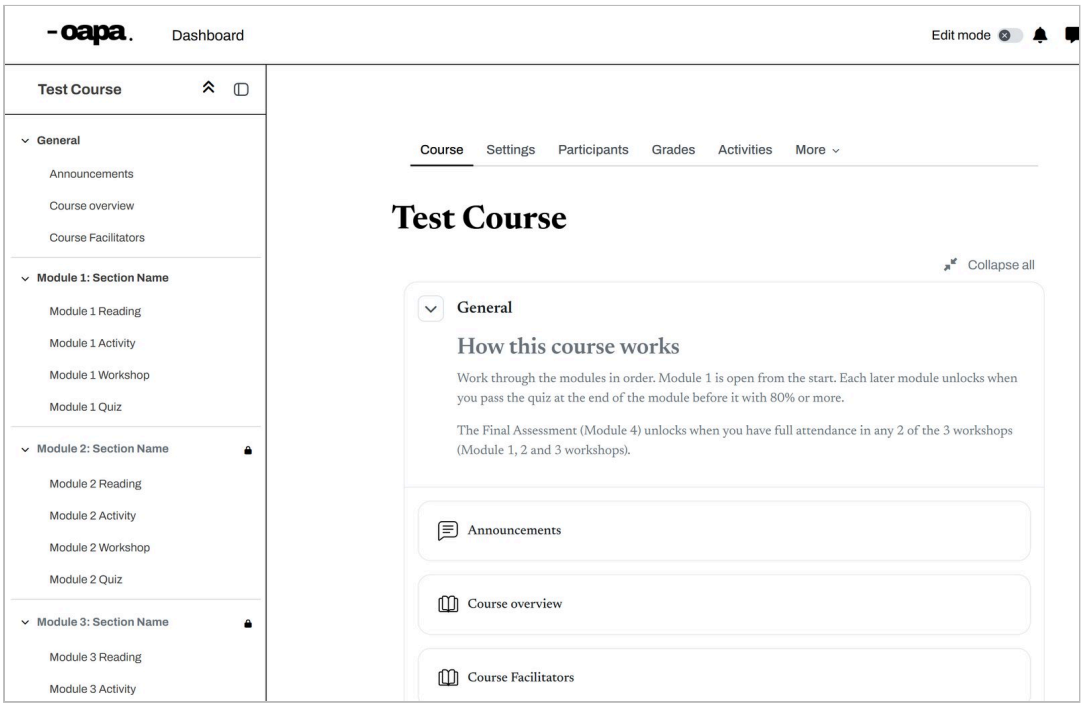

12	Workshop and assessment workflows still work	Pass
13	Reusable template not broken	Pass
14	Before/after evidence captured	Done (19 pages)
15	Unsupported site-level items documented exactly	Done

1. Approved OAPA branding in the isolated environment

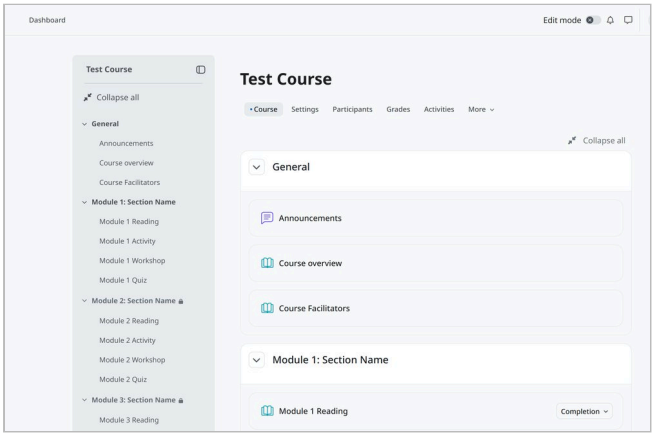

I followed the OAPA Brand Book (draft v1) and Walaa's approved mock-ups (course home, locked module, module overview and participants). All settings were changed in the local Docker copy only. I put every setting in files (`branding/` folder) and a small script `apply.php`, so an OAPA admin can copy the exact same values into the live site by hand.

Moodle setting (Site administration path)	**Value**
Appearance > Logos > Logo	OAPA signature (short version), used on the login page
Appearance > Logos > Compact logo	OAPA signature (short version), used in the header
Appearance > Themes > Boost > Brand colour	#000000
Appearance > Themes > Boost > Login page background image	Black panel with the logo reversed to white (Brand Book allows black/white reversal)
Appearance > Themes > Boost > Advanced settings > Raw initial SCSS	Black and white colour variables, Newsreader as body font, no shadows or gradients, header height 72px
Appearance > Themes > Boost > Advanced settings > Raw SCSS	Archivo for interface text, black active states, white backgrounds, black icons, layout changes from the mock-ups
Appearance > Additional HTML > Within HEAD	Google Fonts link for Newsreader and Archivo

AFTER

BEFORE

WALAA'S MOCK-UP

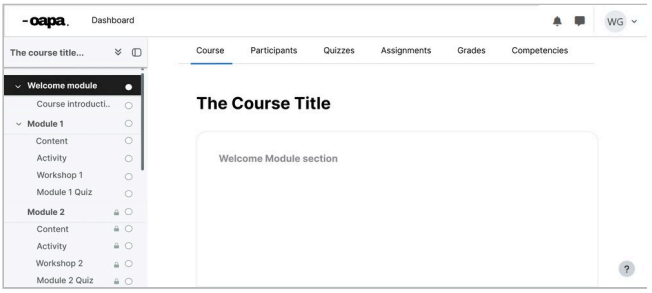

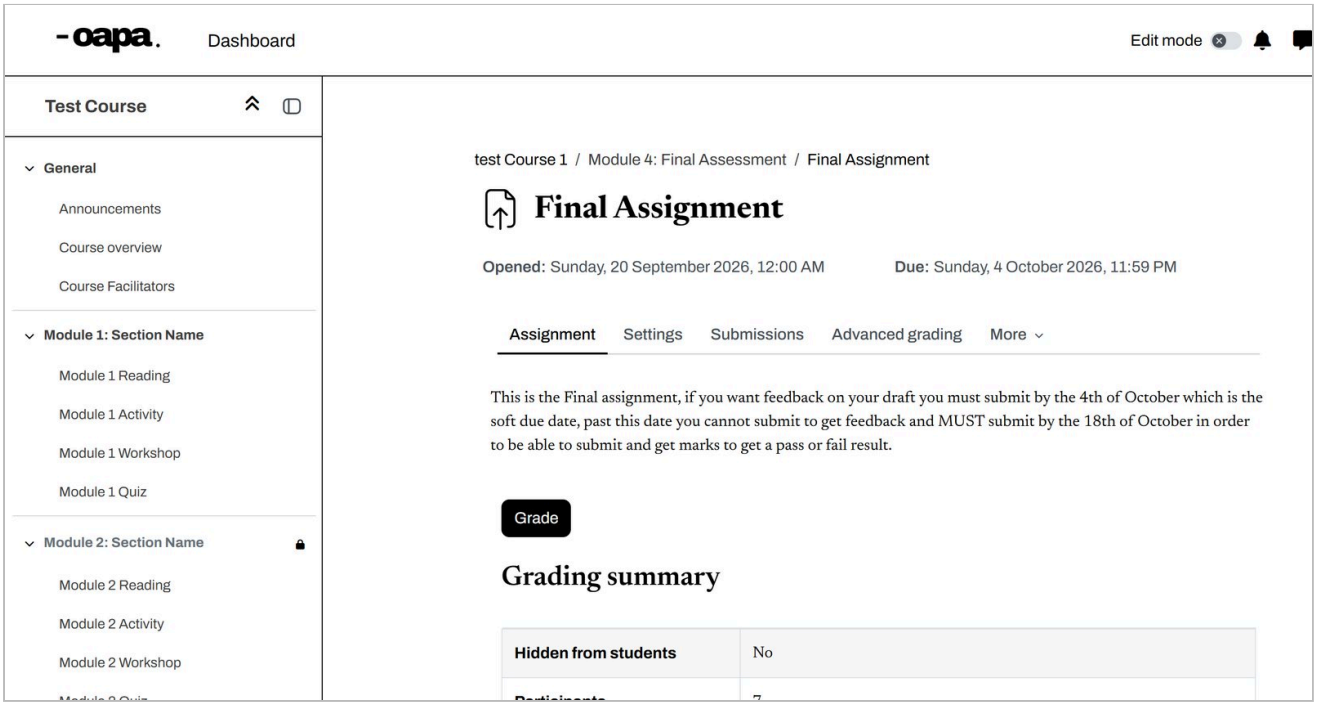

Figure 1. Course home as the teacher sees it after the changes. The before shot and Walaa's mock-up are underneath.

2. Newsreader applied

The Brand Book says Newsreader is for propositions, headings and prose. I set it as the main font in Raw initial SCSS, so course titles, section names, activity names, descriptions and normal text use it. Headings use weight 600 to 700 so they stand out without colour.

AFTER

BEFORE

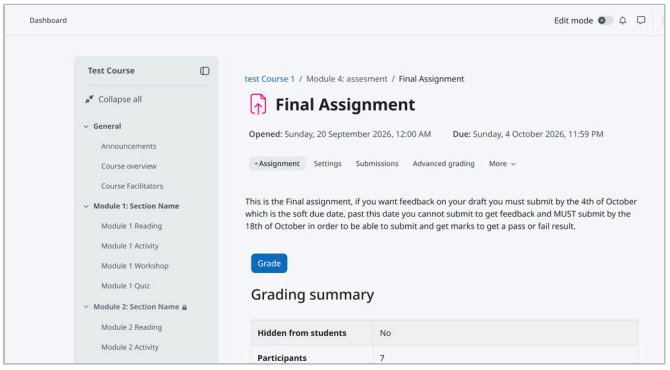

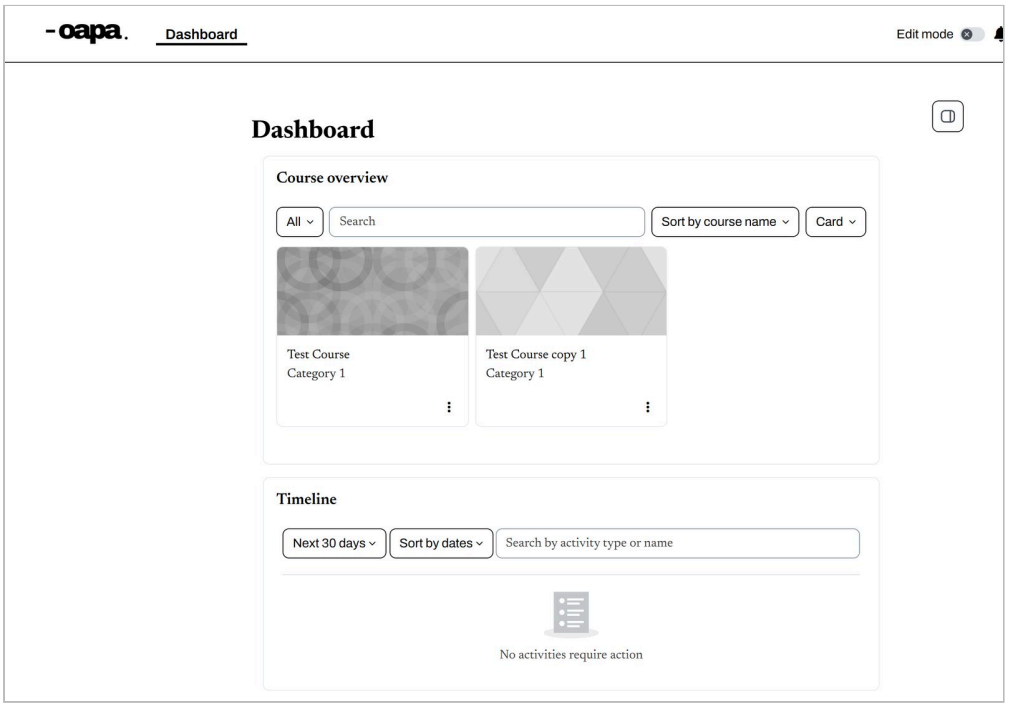

Figure 2. Final Assignment page. Title, description and table text are in Newsreader.

3. Archivo applied

The Brand Book says Archivo is for labels, navigation and functional detail. In Raw SCSS I set Archivo on the header, the course tabs, the left course index, breadcrumbs, buttons, form labels, badges, table headers, completion and date labels, and the Edit mode switch. Moodle 5.3 tab labels and the switch label set their own font, so I targeted those classes directly.

AFTER

BEFORE

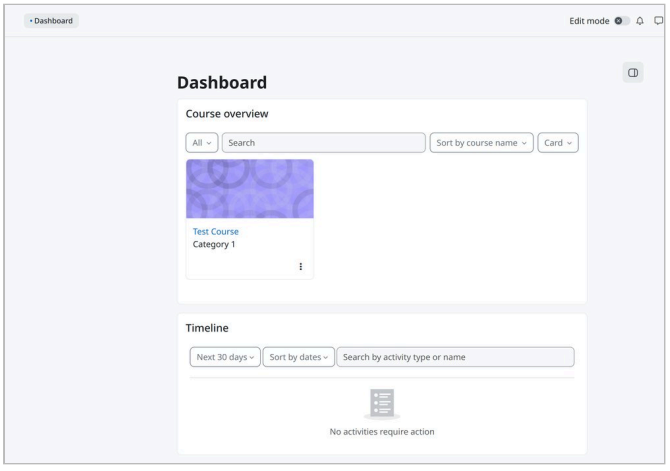

Figure 3. Dashboard. Header, Dashboard link, filters and buttons are in Archivo; headings are in Newsreader.

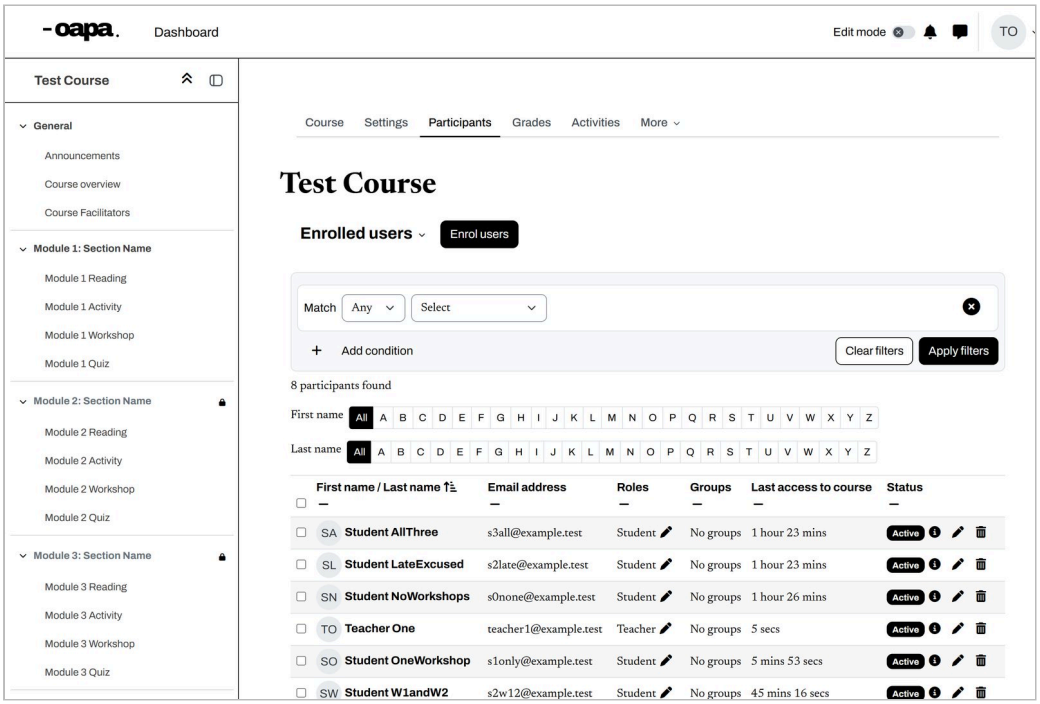

4. Black-and-white treatment

The Brand Book says to use pure black and white and to make contrast with weight, scale and empty space, not colour. What I changed:

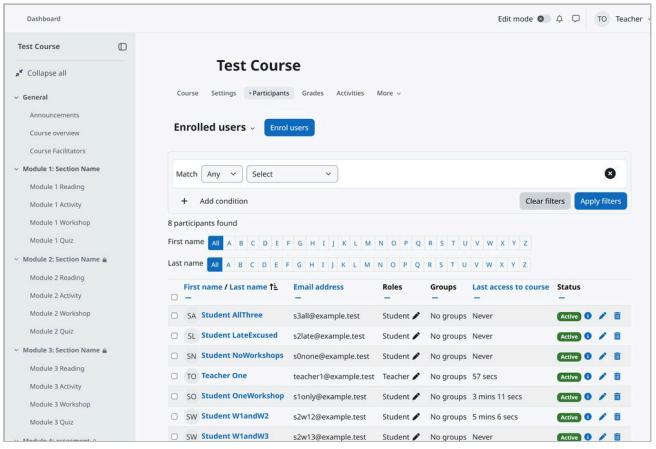

- All blue buttons, links and active states are now black. Outline buttons are white with a black border.
- The coloured activity icons are black (Moodle gives each icon type its own colour filter, I overrode it).
- Grey page, panel and box backgrounds are white. Restriction boxes are white with a thin black border.
- Green "Active" badges on Participants, the green attendance icon and teal help icons are black.
- The Dashboard course image (a generated purple pattern) is shown in greyscale.
- No shadows or gradients.

Exception: I left Moodle's very light grey stripe on table rows. It helps people read across wide tables like the grader report, so I kept it for accessibility. The H5P quiz inside its iframe also keeps H5P's own blue button (see section 15).

AFTER

BEFORE

WALAA'S MOCK-UP

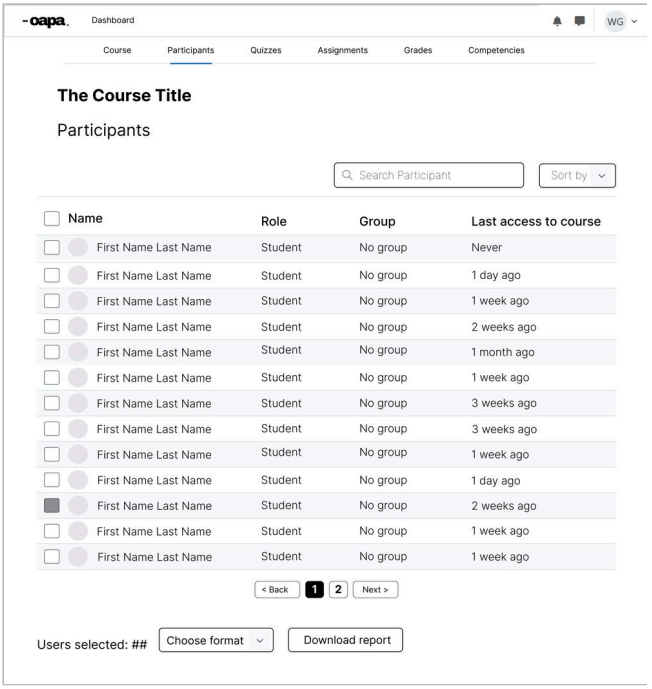

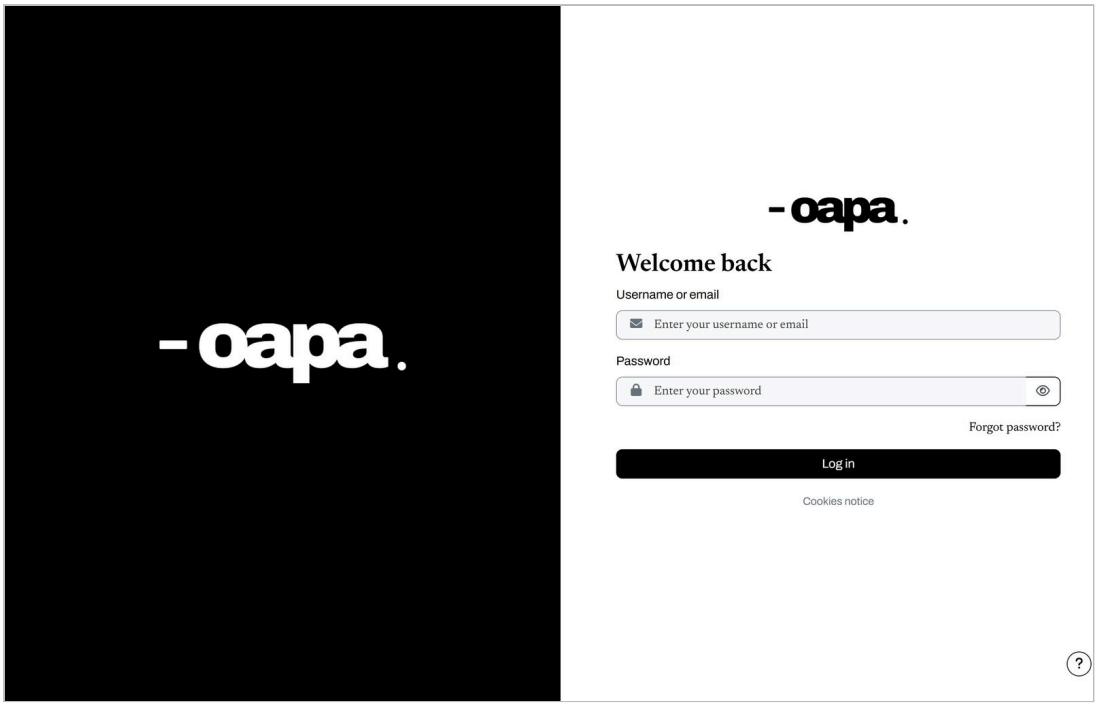

Figure 4. Participants page after the changes. The before shot and Walaa's participants mock-up are underneath.

5. OAPA signature/logo treatment

I used the supplied signature artwork as it is, with no colour, outline, shadow or cropping changes. On the login page the logo is reversed to white on a black panel, which the Brand Book allows. In the header I placed the short "-oapa." signature top left, at the same size and place as in Walaa's approved mock-up (104px wide), with a thin line under the header like the mock-up.

Deviation to confirm with Walaa: the Brand Book says not to show the full signature below 220px on screen, and that it should sit bottom right. I tried 220px first. The header then had to be about 90px to 130px tall and the logo looked far too big next to the mock-up. I also tried the extended-line version (allowed by the Brand Book, same height with a longer line) but it looked too wide and did not match the mock-up. We chose the mock-up size and position because it is the approved UX handoff. Walaa needs to confirm this, or OAPA can update the Brand Book rule for small screen use.

AFTER

BEFORE

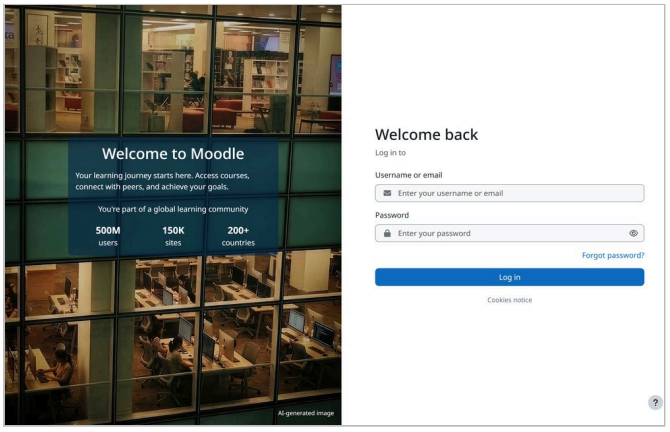

Figure 5. Login page. Moodle stock photo and Moodle promo box replaced by the reversed OAPA signature.

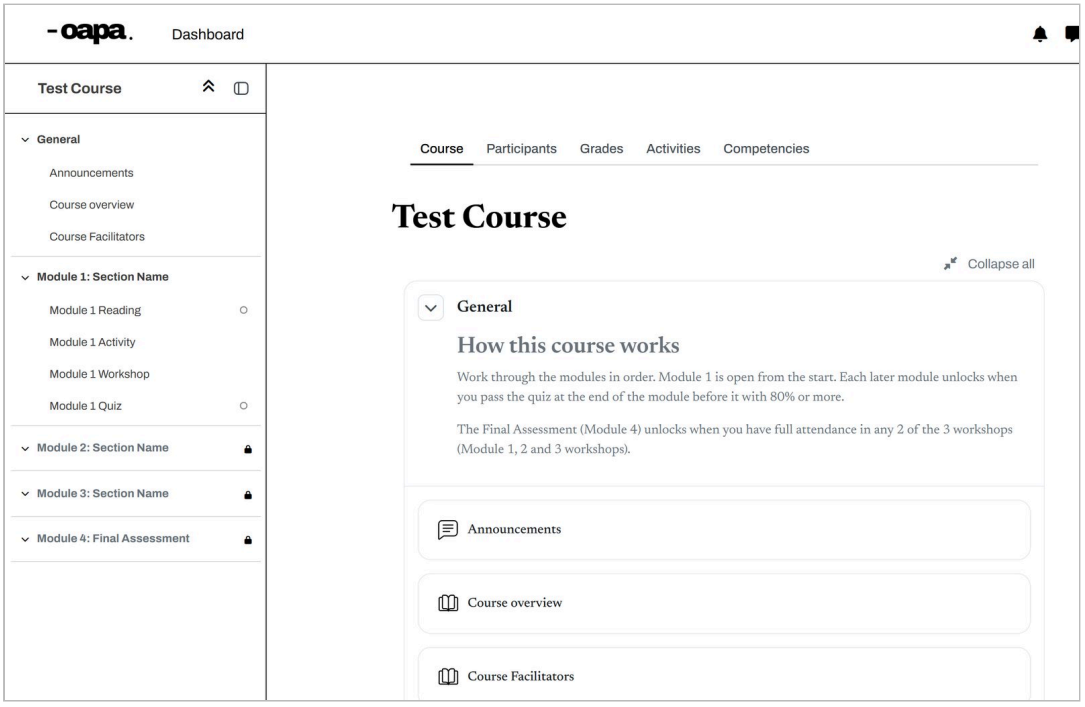

6. Feasible navigation improvements from the UX handoff

From Walaa's UX audit, the Accessibility and Navigation Feasibility list and the mock-ups, I applied these:

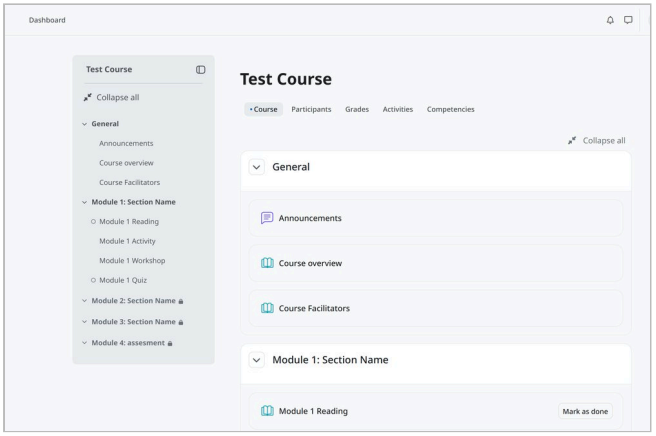

- Course tabs moved up, straight under the header and above the course title (mock-up and "secondary nav higher" item).
- Active tab colour changed from blue to a black underline and bold label (mock-up), the dot indicator removed.

- Left course index sits flush to the left edge and runs the full height, with thin lines between modules. Like the mock-up, the course title, the collapse/expand icon (double arrows) and the close icon are in one row at the top, module titles are bold and the items are indented under them.
- Current page in the course index is a black bar with white text (mock-up).
- Done/not done circles moved to the right of each item with the lock just before them (mock-up).
- Header matches the mock-up: logo, Dashboard link, filled bell and message icons, initials only (no name text).
- Course content changes (teacher-level): Module 4 renamed to "Module 4: Final Assessment", a "How this course works" note on the course home explaining the unlock rules and the 2-of-3 workshop rule, and plain text on each locked module saying what unlocks it.

7. Participants and navigation use Moodle-native capability

The task says not to rebuild what Moodle already does. So I did not build a new participants page or new tabs. Instead:

- Participants: Moodle's own page already has search and filters, sort by column, paging and "With selected users" actions. I only restyled it to match the mock-up colours and fonts. Hiding the email column needs a site setting (section 15).
- "Quizzes" and "Assignments" tabs: Moodle's own Activities tab already lists the course activities grouped by type (Assignments, Attendances, Forums, H5P, Resources). I kept it as the native equivalent instead of adding custom tabs.
- Previous and Next links on activity pages are Moodle's own activity navigation, already on.

AFTER

BEFORE

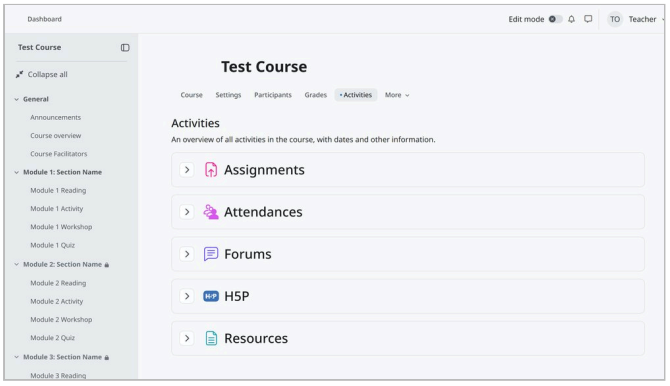

Figure 9. Activities tab. Moodle's native page that groups Assignments, Attendances, Forums, H5P and Resources.

8. Accessibility corrections

- Text contrast: black on white is 21:1, well above WCAG AA (4.5:1).
- Keyboard focus: links, buttons and tabs get a clear 3px black outline with a white gap.
- Status is not shown by colour only: the active tab has an underline and bold text, the current page has a black bar, locks are shown as icons and text.
- Links are underlined on hover so they can still be spotted without colour.
- Course index text is bigger (items went from about 14px to 16px) with more space between rows, which helps reading and clicking.
- Clearer heading size for the course title.
- Locked modules now say in plain words what the student has to do (for example "Locked until you pass the Module 1 Quiz with 80% or more").
- Mobile still works: the header collapses to the menu button, and the course index opens as a panel.

Walaa's Accessibility and Navigation Feasibility list (26 September) gives some fixes to Development at teacher level. This is where each one is now in the course:

Walaa's finding	Fix for Development	Status
"Teaching Team" is the wrong label	Rename to "Course Facilitators"	Done. The course home shows "Course Facilitators" (Figure 1).
Module 1 not unlocked by default	Module 1 open from the start	Done. Module 1 has no restriction, so every student can open it straight away.
Module 1 workshop locked	Unlock all items in Module 1	Done. None of the Module 1 items are locked (Figures 6 and 7).
Quiz comes before the workshop	Order Content, Activity, Workshop, Quiz	Done. Modules 1 to 3 are each Reading, Activity, Workshop, Quiz. Module 4 only has the Final Assignment.
No note about the 2 of 3 workshop rule	Short note on the course home	Done. "How this course works" note on the course home and a note on Module 4.

Module 4 not clearly titled	Rename to "Module 4: Final Assessment"	Done.
Locked items have no text explanation	Plain lock message	Done. Modules 2, 3 and 4 each say what unlocks them.
Mixed completion (self-mark and auto)	Pick one completion rule and use it everywhere	Not done yet. Readings use "Mark as done", the H5P quizzes use a passing grade, and the URL and workshop items have completion turned off. Which rule to use is still waiting on Riley and the client (D-02/D-07), so I did not pick one myself.
Module headings look like sub-headings	Check that module titles use a different heading level	Partly done. In the left menu, module titles are now bold and the items are regular and indented. I have not checked the heading levels with a screen reader.

I did not do a full screen reader test. That is a good next step for QA.

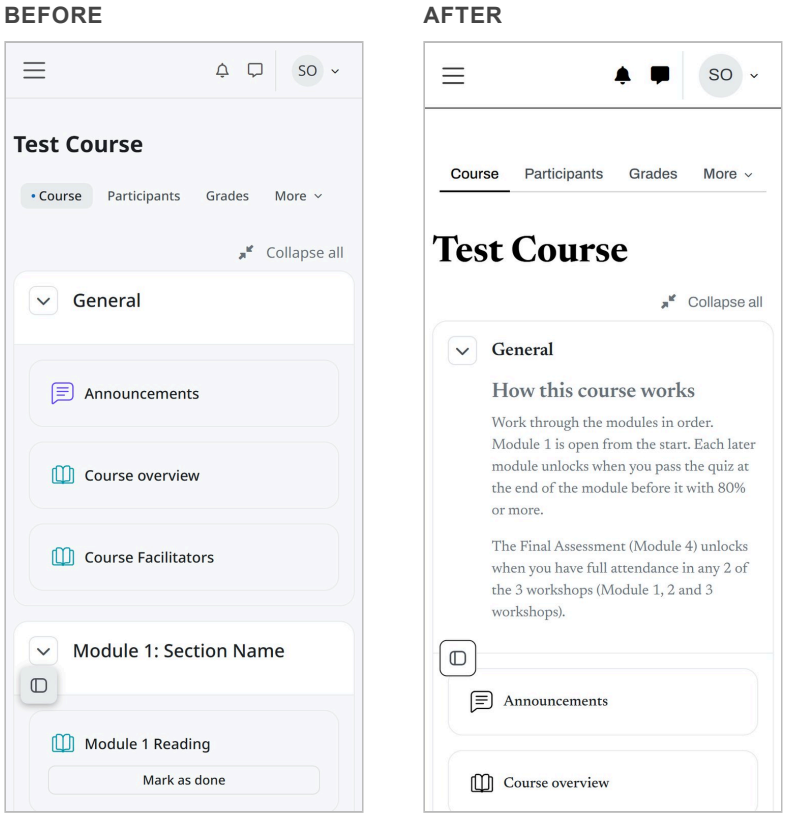

Figure 10. Mobile course home (390px wide).

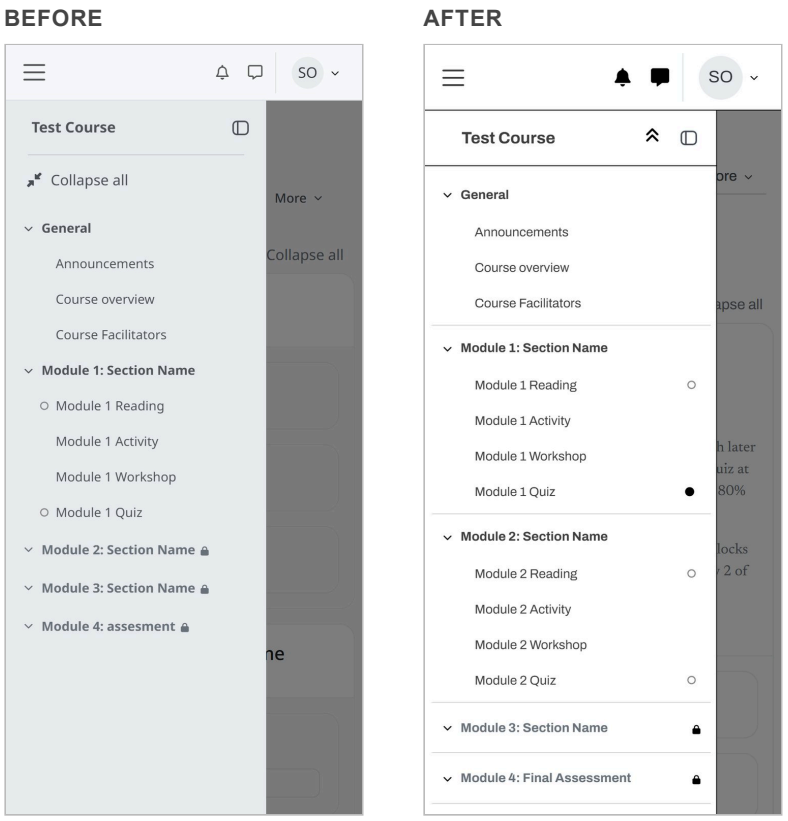

Figure 11. Mobile with the course index panel open.

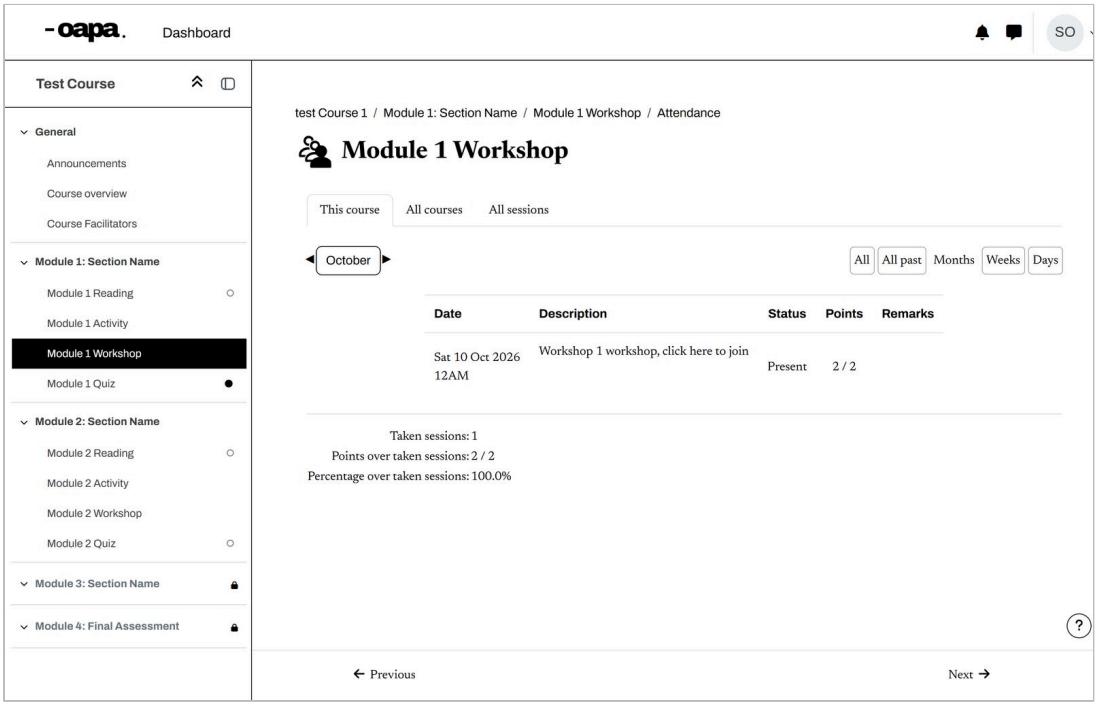

9. Site-level changes only in the isolated environment

All theme and admin settings in this report were changed only in our local Docker copy (http://moodle.localhost). Nothing was changed on academy.open-publishing.org. The exact values are saved in the `branding/` files so an OAPA admin can apply them later after approval. The course text changes (step 2) were also made only in the local copy of "test Course 1".

10. Course completion still works

I checked that completion tracking still shows and updates after the changes. "Mark as done" on the module readings still works, and the H5P quizzes still complete on receiving a passing grade (80%). The completion circles now sit on the right in the course index, but they are the same Moodle completion data.

AFTER

BEFORE

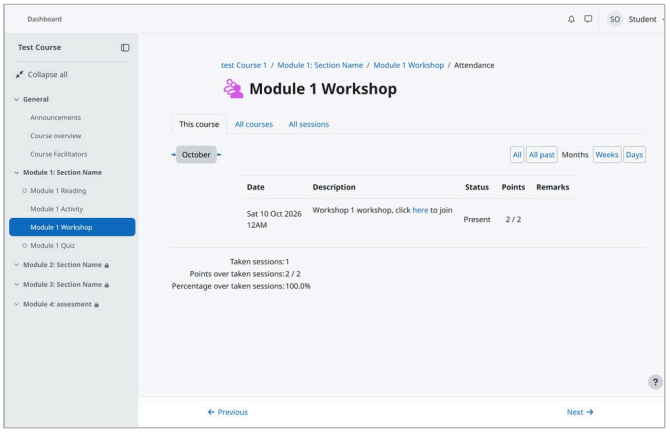

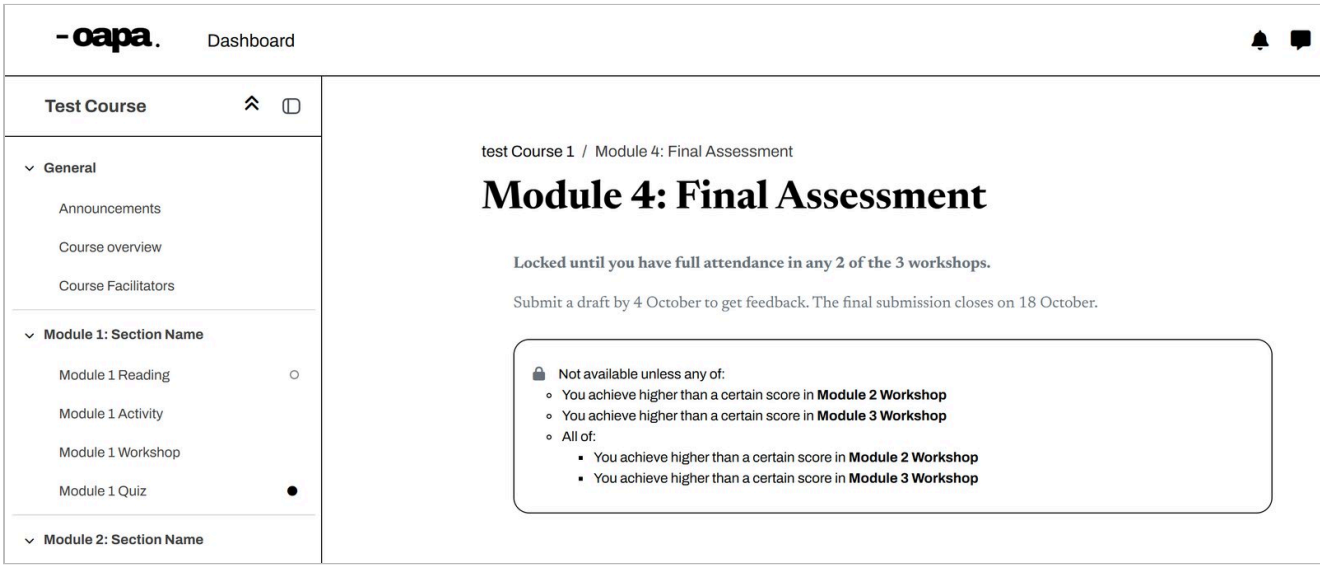

Figure 12. Student workshop status page after branding. Attendance points still recorded (2/2, 100%).

11. Restricted access still works

Module 2 and 3 still unlock only after the previous quiz is passed with 80% or more, and Module 4 still needs full attendance in any 2 of the 3 workshops. I tested it with the test student accounts:

Student	Workshops with full marks	Module 4 expected	Module 4 actual
Student OneWorkshop (s1only)	W1 only	Locked	Locked
Student W1andW2 (s2w12)	W1 and W2	Open	Open

AFTER

BEFORE

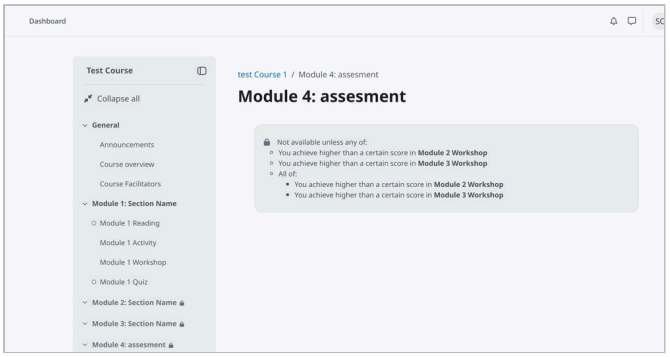

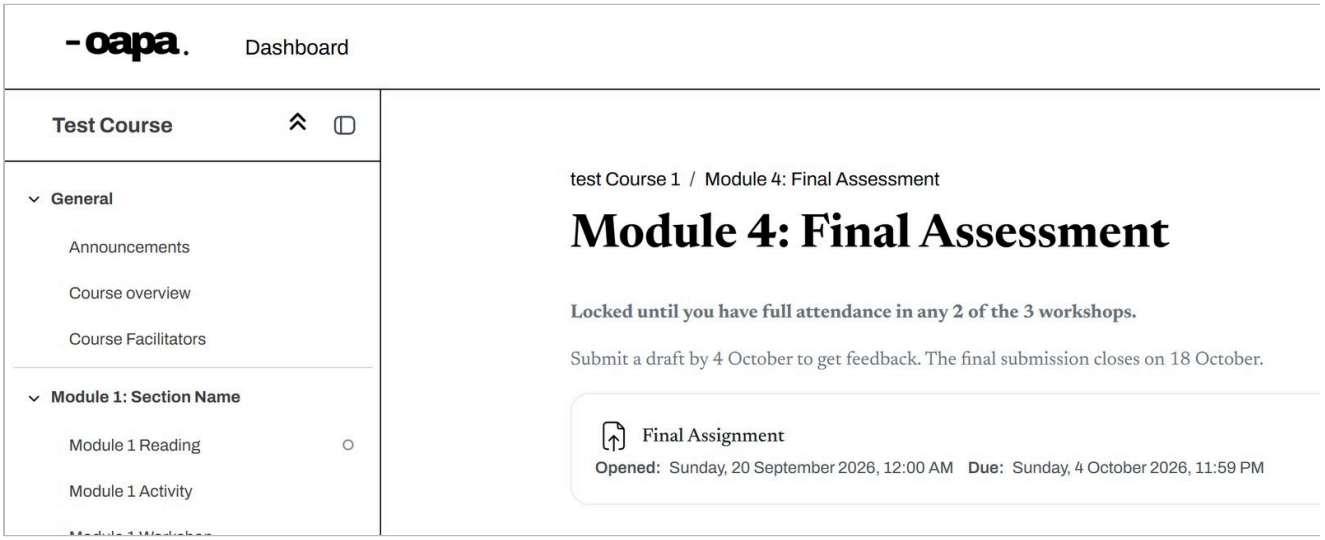

Figure 13. Module 4 for a student with 1 of 3 workshops: still locked, rule shown.

AFTER

BEFORE

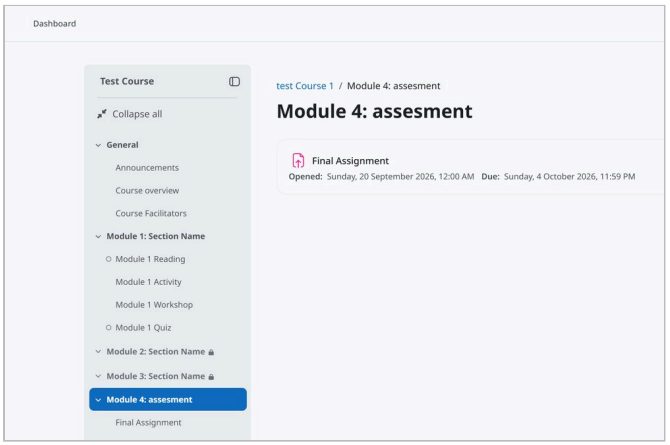

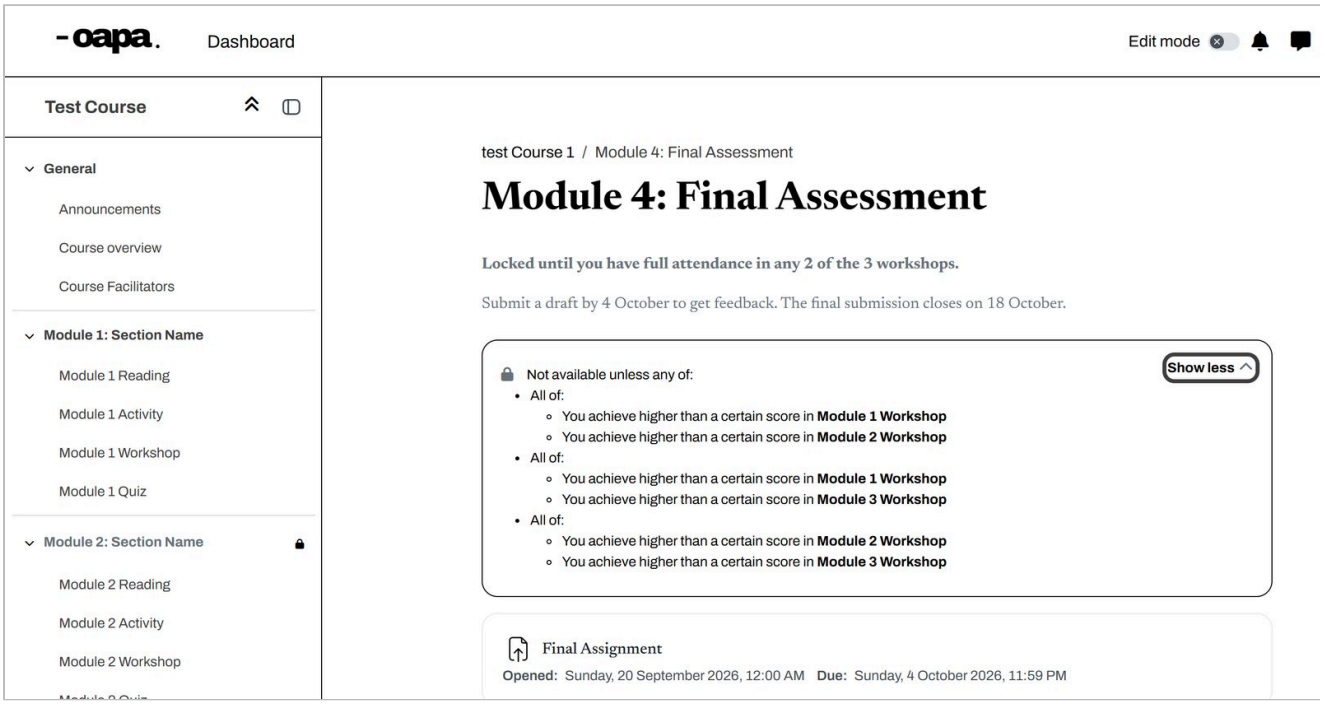

Figure 14. Module 4 for a student with 2 of 3 workshops: unlocked, Final Assignment visible.

AFTER

BEFORE

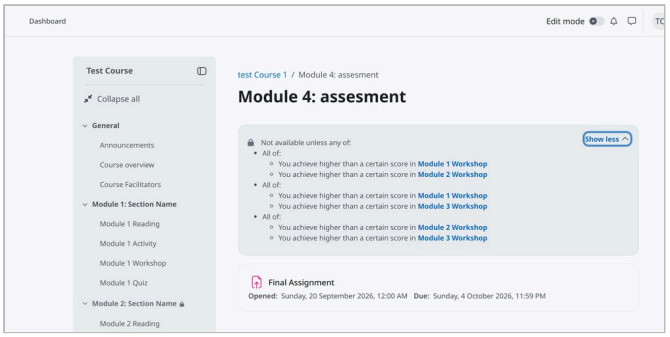

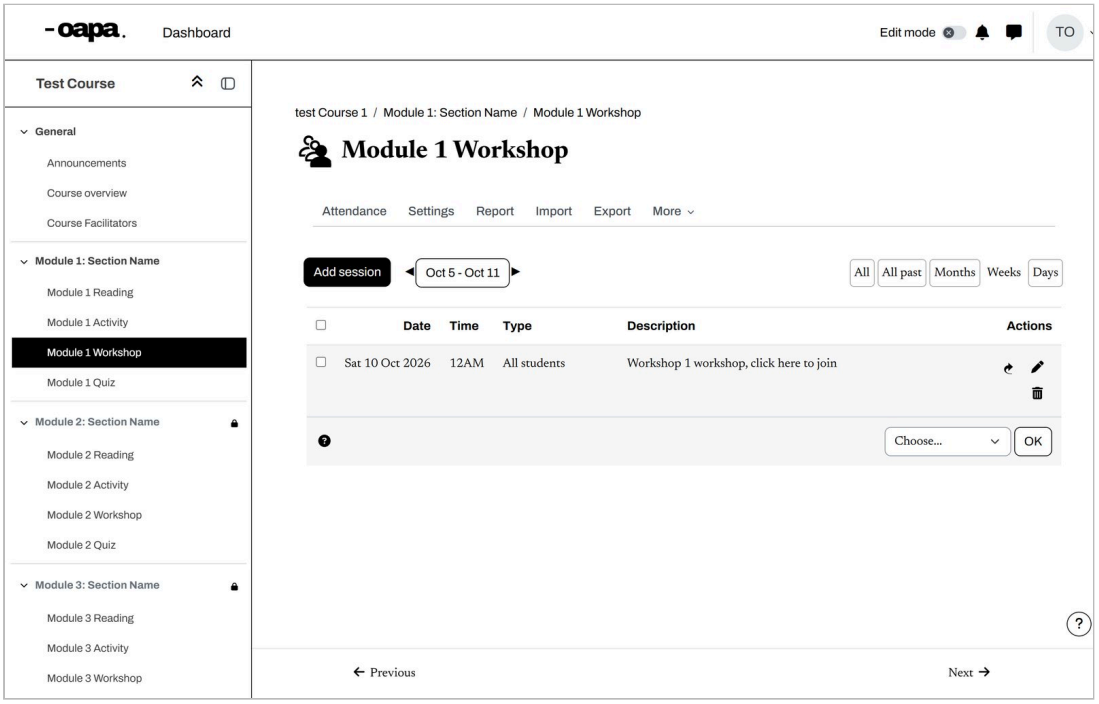

Figure 15. Teacher view of the Module 4 restriction (any 2 of 3 workshops).

12. Workshop and assessment workflows still work

The workshop (Attendance) pages, the teacher session list, the grader report and the Final Assignment page all load and work the same as before. Only colours and fonts changed. The full

workshop and assessment cross-test is in my Task 70 report.

AFTER

BEFORE

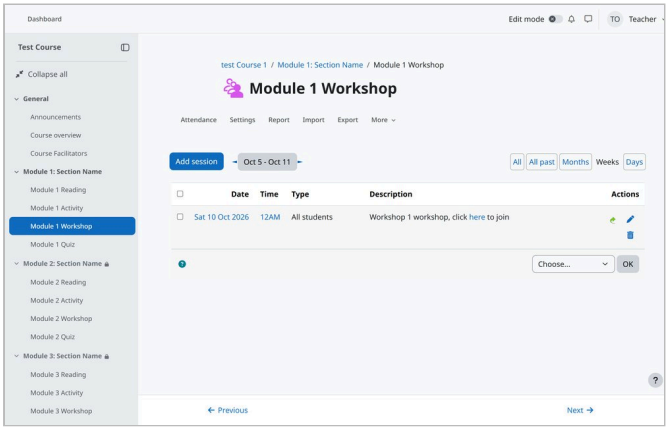

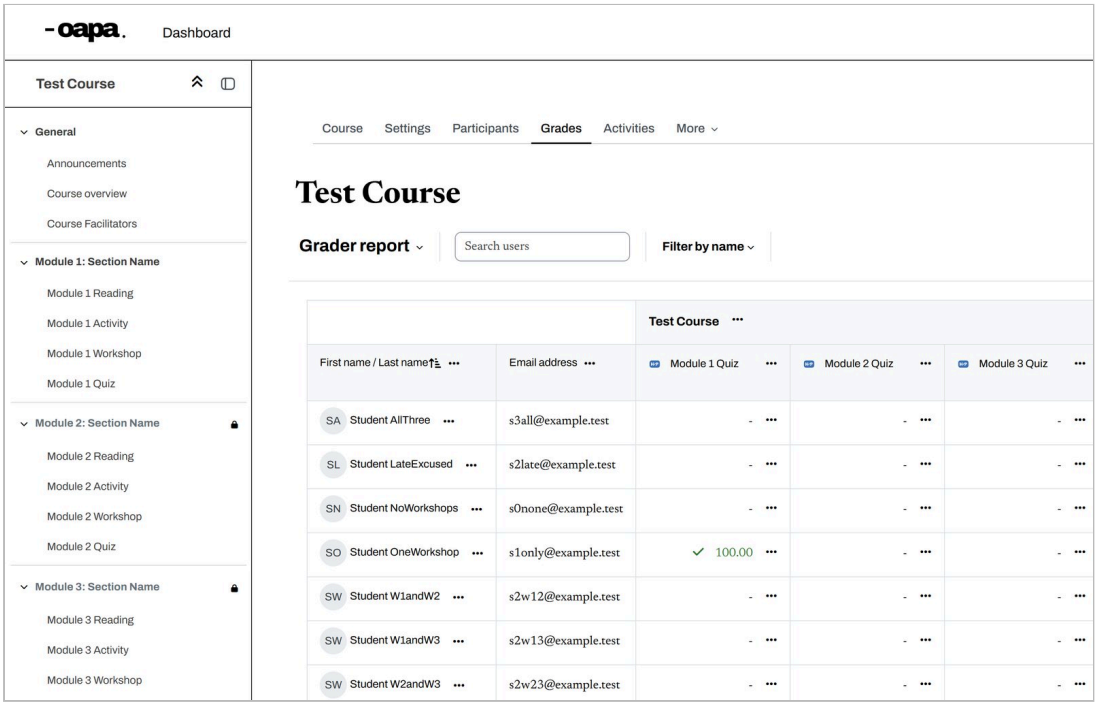

Figure 16. Workshop sessions (teacher).

AFTER

BEFORE

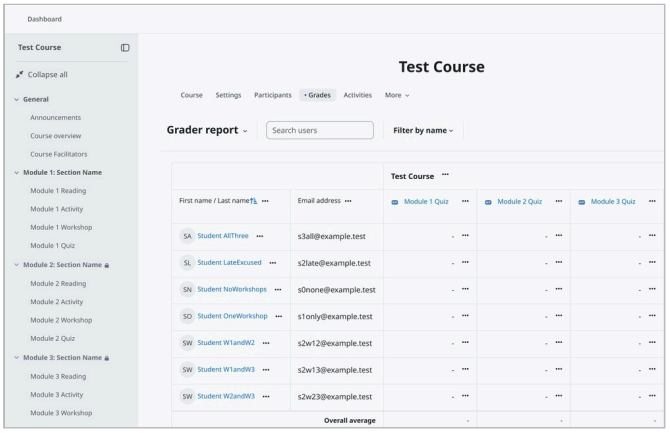

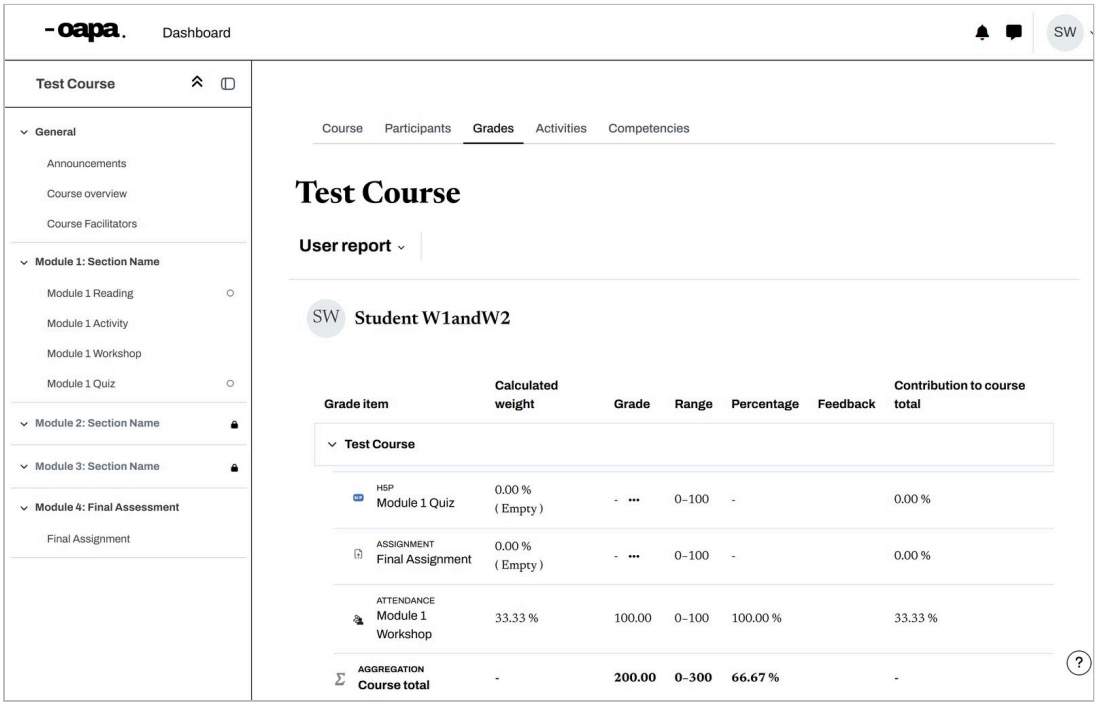

Figure 17. Grader report (teacher). Workshop grades still show for all test students.

AFTER

BEFORE

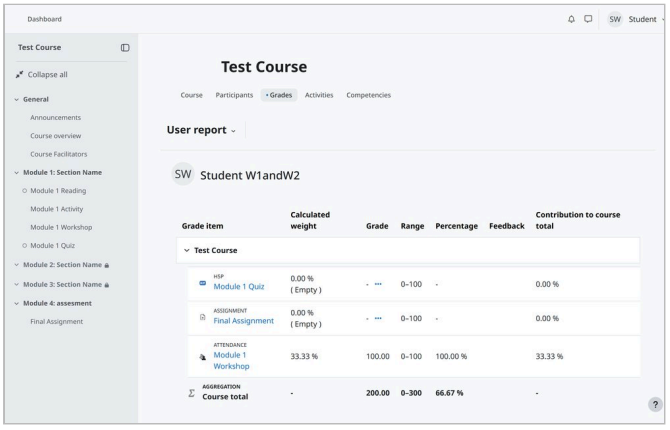

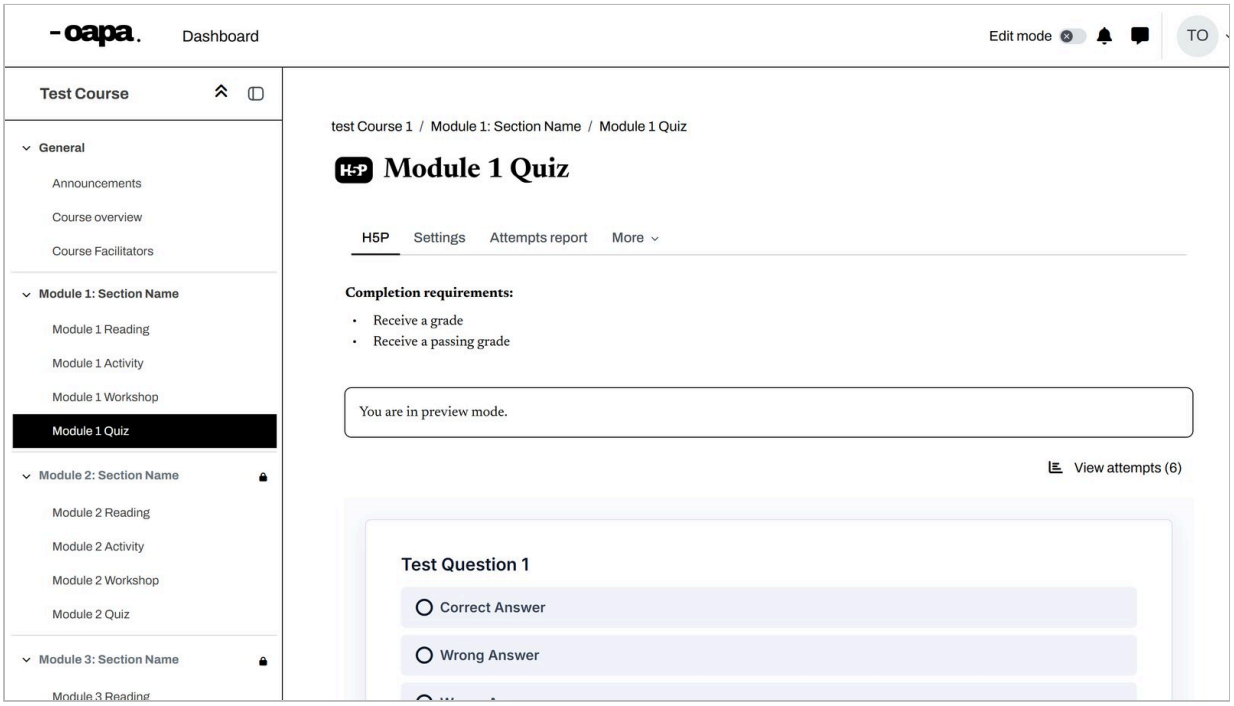

Figure 18. Student grade report after branding.

AFTER

BEFORE

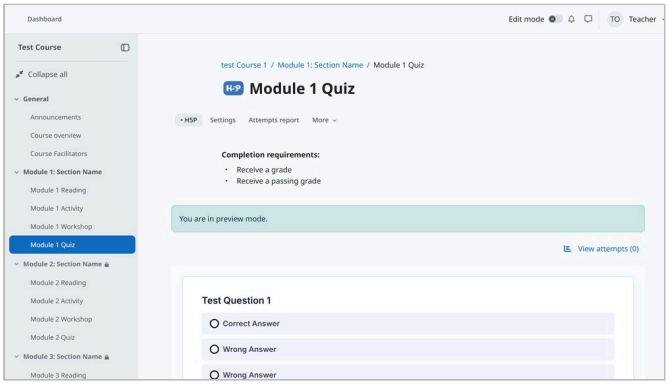

Figure 19. H5P quiz page. The Moodle page is branded; the quiz inside the H5P iframe keeps H5P styling.

13. Reusable template not broken

The branding is all at site/theme level, so nothing is stored inside the course. To check the course still works as a template, I backed up "test Course 1" with Moodle's backup tool and restored it as a new course. The new course kept its sections, activities and restriction rules, and it shows with the OAPA branding straight away, because the branding comes from the theme and not the course.

Check	Result
Backup of test Course 1 (admin/cli/backup.php)	Backup completed
Restore as a new course (admin/cli/restore_backup.php)	Restored as "Test Course copy 1"
Sections in the restored copy	General, Module 1, Module 2, Module 3, Module 4: Final Assessment (all 5 kept)
Restriction rules in the restored copy	Module 2, 3 and 4 still have their access rules, Module 1 open

Branding on the restored copy	Same OAPA theme, nothing to set per course

Result: Pass. The course still works as a reusable template.

14. Before/after evidence

I took 19 screenshots before any change and the same 19 pages after: 17 at desktop size (1440 x 900, high resolution) and 2 mobile shots at 390px wide. I used the same accounts for the before and after shots, except the student course home and the locked Module 2 page, where I used s0none for the after shots because s1only had passed the Module 1 Quiz in my H5P retest. The full set is saved with my local project files and I can share it on request. In each figure the after shot is shown big, with the before shot (and the mock-up if there is one) underneath. I cropped the shots to the part of the page that matters so the text can still be read.

Pages covered
Teacher: course home, module page, Module 4 restriction, dashboard, participants, workshop sessions, H5P quiz, final assignment, activities tab, grader report
Student: course home, locked Module 2, Module 4 locked (1 of 3), workshop status, Module 4 unlocked (2 of 3), grades
Guest: login page. Mobile: course home and course index panel

15. Unsupported site-level items and exact dependencies

Item	**Why it is not done here**	**Exact setting, capability or change needed**	**Owner**
Apply the branding on the live Academy	We only have the isolated copy	Copy the values in section 1 into the same Site administration settings on the live site (needs `moodle/site:config`)	OAPA admin (via Aryan)
Hide the email column on Participants (mock-up)	Site-level setting	Site administration > Users > Permissions > User policies > Show user identity (`showuseridentity`): untick Email address	OAPA admin
Separate "Quizzes" and "Assignments" tabs, remove "Activities"	Moodle has no setting to add or remove course tabs	Needs a small local plugin or child theme that changes the course secondary navigation. We recommend keeping the native Activities page instead (section 7)	Walaa to decide, OAPA admin if code
Logo bottom right (Brand Book)	Header layout is fixed in the Boost template	Child theme overriding `theme_boost/navbar` template, or a Brand Book update for screen use	Walaa / OAPA
H5P quiz inside the iframe (blue Check button)	H5P content is in an iframe, so theme CSS does not reach it	Child theme renderer overriding `core_h5p\output\renderer::h5p_alter_styles()` to load a black and white H5P stylesheet	OAPA admin / developer

Previous/Next buttons on module (section) pages	Moodle only has activity navigation on activity pages	Teacher-level workaround: a text/page at the end of each module with links, or a plugin	Course team
Real module names instead of "Section Name"	Needs final content from the client	Teacher-level: Edit section > Section name, once names are given	Client / content owner
Completion for URL and Workshop items	Completion is turned off on these activities right now	Teacher-level: turn on "Students must view this activity" or manual completion in each activity's settings	Course team
Google Fonts on live	Fonts load from fonts.googleapis.com	If OAPA does not allow external fonts, upload the font files into a child theme instead	OAPA admin
