Continuity Guide

Group 74 – Building an editor academy

What can be safely replaced

These items are content, not structure, and can be edited in the duplicated course.

- **Module and section names.** The template still uses the placeholder "Section Name" (open item D8). Replace it with the real module titles.
- **Reading and book content.** The Module 1 Reading page currently says "No content has been added to this book yet".
- **Quiz questions.** Replace the H5P question sets with the real questions, keeping grade out of 100, pass mark 80 and tracking on.
- **Activity, workshop and assignment descriptions**, including the Final Assignment text.
- **Workshop dates and times.** Workshops have no real date and time yet (open item D6), so add them in the attendance sessions.
- **Course facilitator details** on the "Course Facilitators" page.
- **Course welcome text**, such as the "How this course works" summary. Update it only so it still matches the unlock rules (see "Do not change without technical review").

Patterns to keep consistent

These patterns make every OAPA course look and behave the same. Keep them when adapting content.

Navigation

- Tab row order: Course, Participants, Quizzes, Assignments, Grades, Competencies. It stays sticky and at the same height on every course page.
- Left panel: closed on Participants, Quizzes, Assignments and Grades; open on the course page and inside activities.
- Previous and Next sit under the content, with Previous outlined on the left, Next filled black on the right and "Mark as done" beside Next.
- Module summaries say what unlocks the module (for example, "Unlocked by passing the Module 1 Quiz with 80% or more"), so the wording is true whether the module is locked or open.

Branding

- Black and white only, with 1 px black borders on inputs, selects and tick boxes.
- The single exception is the completion green (green dot, and the "Done" button outline, tick and text). Do not use it for anything else.

- One filled button per view. Keep "Done" as an outline so "Next" stays the main button.
- Notification count in black and white, and grey icons on the Grades page.
- The logo is 104 px wide, set by $oapa-logo-width. The Brand Book minimum is 220 px, so check with the brand owner before changing it.
- Light and dark mode both use the same variables, so test new content in both.

Accessibility

- Search, sort, pager and navigation buttons are 44 px tall.
- Inputs show a 2 px solid focus outline.
- Search and sort controls keep their labels.
- 16 px side margins and no sideways scrolling at 390 px.
- Participants: students see Name and Role only, teachers get tick boxes, Group, Last access and CSV download.

When adding new plugins, avoid adding colours or extra filled buttons, keep the template's existing fonts, and check the page at phone width.

Do not change without technical review

These elements are tied together. A small edit can break unlock rules, grades or the layout, so ask a Moodle developer first.

Element	Why it needs review
Raw SCSS (theme setting)	Holds all colours, borders, dark mode variables, button styles and the logo width. Changes affect the whole site.
Additional HTML script (theme setting)	Rearranges the tab row, the left panel behaviour and the Participants layout. It works by changing Moodle's own page elements, so a Moodle upgrade could affect it.
Unlock and restriction rules	Modules 2 to 4 unlock by passing the previous quiz at 80% or more. The Final Assessment unlocks with full attendance at any 2 of the 3 workshops. The Module 4 rule should also require Modules 2 and 3 (D1, fixed on the shared site in Task 78).
Completion settings, pass marks and grade settings	These drive the unlock rules and grades. The H5P quizzes need grade out of 100, pass mark 80 and tracking on.
Attendance sessions and statuses	The workshop rule depends on them. An attendance override currently looks like real attendance (D4).
H5P "Check" button colour	It sits inside the H5P iframe, so site CSS cannot reach it. Change it only through Site administration > H5P > H5P settings, custom styles, or use the native quiz fallback.

Participants permissions	What students and teachers see follows Moodle roles. The script grants nothing new, so do not edit role permissions to change the view.

Duplicating the template

The Raw SCSS and Additional HTML are theme settings, so they apply across the site. Duplicating a course copies the content and rules, not the styling.

1. Duplicate the course with Moodle's backup and restore. The original template passed 23 of 23 comparison checks against its restored copy.
2. Confirm the unlock rules in the copy point at the copy's own quizzes and workshops, not the original's.
3. Replace the placeholder content (module names, readings, quiz questions, workshop dates and facilitator details).
4. Update each module summary only if the unlock condition changes, keeping the "Unlocked by..." wording.
5. Check the course as a student and as a teacher, in light and dark mode, at desktop and phone width.
6. Run the gate check with test students: one with no progress, one who passed Module 1 only, one with attendance at two workshops, and one with a late-excused attendance. Module 4 should open only when its rules are met.
7. Check the Participants page for both roles, including search and the CSV download as a teacher.
