

Task 60: Sprint 2 Interactivity, Tracking and Technical Quality Closeout Report

Shaikh Zarin Tasnim (Dev 2), Team 74, OAPA Editor Academy Moodle Platform, 4 October 2026

1. What This Task Was About

This task asked me to close out the Sprint 2 interactivity, tracking and technical quality evidence using the final OAPA Academy environment. The main question was whether OAPA had installed the H5P Question Set content type since it was last blocked, and if so, to re-test it properly and record the actual result. If it was still unavailable, I was to fall back on the native Moodle Quiz approach already validated earlier in the project. Either way, I needed to confirm learner completion, feedback, tracking and reporting evidence, and document the remaining environment assumptions, defects and site-level dependencies without treating H5P as mandatory.

For context, H5P Question Set has a history on this project. Early on, the real OAPA course threw an "H5P file not found (invalid contextid)" error on every piece of H5P content, pre-existing or freshly uploaded. After that was somehow resolved, a second, separate error appeared: "missing-main-library: Missing main library H5P.QuestionSet 1.21", meaning the Question Set content type's required library simply wasn't installed, and Teacher-level access can't install libraries. Because of that, the Sprint 2 Core MVP task was built on a native Moodle Quiz instead, specifically so the project wouldn't depend on a content type that might never become available. This task is the first chance to check whether that's changed.

2. H5P Question Set, Re-tested on the Current Environment

#	Test Case	Result	Notes
1	H5P Question Set content type installation status	Resolved, now installed	Previously blocked by a missing-library error. Checking the Content Bank's "Add" menu now shows Question Set listed as an available content type, between Multiple Choice and Questionnaire (Fig. 1 and Fig. 2).
2	H5P Question Set editor opens and accepts content	Confirmed	Built a one-question Multiple Choice test item directly in the editor with no errors, saved successfully (Fig. 3).
3	Per-question feedback behaviour	Confirmed	Selecting the wrong answer marked it with a red cross and showed a live score of 0/1, with working Show solution and Retry options (Fig. 4).
4	Overall feedback behaviour	Confirmed	Clicking Finish produced a results screen with a per-question score breakdown

#	Test Case	Result	Notes
			and a total (0 of 1 correct) (Fig. 5).

Fig. 1. The HSP Content Bank for the course, with an Add menu for creating content types directly rather than only uploading packages.

Fig. 2. Question Set now appears in the content type list, between Multiple Choice and Questionnaire, confirming the previously missing library is now installed.

Fig. 3. A test Question Set item built and saved successfully, rendering as a working multiple-choice question.

Fig. 4. Selecting the wrong answer and clicking Check correctly marks it incorrect, scores 0/1, and offers Show solution and Retry.

Fig. 5. Clicking Finish shows the overall results screen with a per-question score table and a total.

This test was run directly in the Content Bank preview, which exercises the content type itself (editor, interactivity, feedback, scoring) but isn't attached to a graded course activity. For completion tracking, attempt history and Teacher-side reporting, I'm relying on Task 59's evidence rather than re-testing live, since the Knowledge Check activities already in "Team 74 - Course Development" are built on the same underlying H5P activity module. That evidence showed grading by highest attempt rather than latest attempt, correct completion marking, and a Teacher-side Attempts report that doesn't show a genuinely enrolled student's recorded attempts. Those findings carry over here and aren't re-litigated in this report.

3. Native Moodle Quiz Fallback, Re-confirmed

The native Moodle Quiz approach ("Module Self-Check 1", built in an earlier sprint using six native question types: Multiple Choice, True/False, Matching, Numerical, Short Answer, and Drag and Drop into text) was kept as the representative Core MVP fallback specifically because H5P Question Set wasn't available at the time. It was already fully tested then, including all three overall feedback tiers, per-question feedback for correct and incorrect answers, and question reuse through the Question Bank, so I didn't repeat that full walkthrough here. I did check that it's still there and still intact: it opened cleanly with all six questions present and correctly configured (Fig. 6).

Question 1

Not yet answered

Marked out of 1.00

Flag question

Edit question

v1 (latest)

Which of these is an example of two-factor authentication?

- ☐ a. Using a password and security question
- ☐ b. Using two different passwords for the same account
- ☐ c. Using a password with a longer character length
- ☐ d. Using a password and a verification code from your phone

Question 2

Not yet answered

Marked out of 1.00

Fig. 6. Module Self-Check 1, still intact with all six native question types as originally built.

With H5P Question Set now working, the native Quiz is no longer the only option for a self-check pattern, but I'm not treating that as a reason to drop it. It stays as a documented, working fallback in case H5P becomes unreliable again, and the choice between the two can be made by whoever owns that decision rather than by this test.

4. Environment Assumptions and Site-Level Dependencies

A few things worth being explicit about, since they shape what any future module builder can rely on:

- H5P Question Set's required library is now installed on this Moodle instance. That wasn't true earlier in the project, so anything that assumed it would never be available (like the decision to build the Core MVP on a native Quiz instead) was a reasonable call at the time, not a mistake.
- Whether this library install applies site-wide or just to this course wasn't something I could check, since that needs Site Administrator access the team doesn't have. I'm treating it as working for this course, which is what matters for our deliverable, without claiming it's guaranteed everywhere on the OAPA site.
- The Teacher-side Attempts report gap flagged in Task 59 (a genuinely enrolled Student's recorded attempts not showing up in the Teacher view) still applies to H5P activities generally, including Question Set, since it's the same underlying report.
- The Gradebook/Grader report on "Team 74 - Course Development" is still stuck on "Recalculating grades," a Site Administrator dependent issue first reported in Task 49 and still unresolved.

5. Defect Status Summary

#	Test Case	Result	Notes
1	H5P Question Set missing-library error	Resolved	Required library now installed and working, confirmed by building and running a test item end to end.
2	Teacher-side Attempts report not showing enrolled student attempts	Open	Carried over from Task 59, applies to H5P activities generally. Raised for Reshan to check.
3	Course Grader report stuck on Recalculating grades	Blocked	Needs Site Administrator access. First reported in Task 49, still unresolved.
4	Scope of the H5P library install (course-level vs site-wide)	Unverified, not a defect	Can't be confirmed without Site Administrator access. Not blocking this deliverable, since the content type works for this course.

6. Sprint 3 / Final Documentation Handoff

For whoever picks this up next: H5P Question Set is a usable option again for building self-checks on this course, confirmed by direct testing of the editor, feedback and scoring. The native Moodle Quiz pattern from Sprint 2 ("Module Self-Check 1") is still intact and fully documented as a working alternative, so neither approach is a single point of failure for the project. No H5P issue is being presented as resolved without evidence here: the missing-library error is specifically confirmed fixed by a successful end-to-end build and test, not by assumption. The two outstanding items (Teacher-side Attempts reporting gap, stuck Gradebook) are both staff-side reporting limitations outside what Teacher-level access can fix, and both are already flagged for the right owners.

7. Summary

The main open question going into this task, whether H5P Question Set would finally be available, is resolved: it's installed, and a test item built from scratch works correctly end to end, including per-question and overall feedback. The native Moodle Quiz fallback from the earlier sprint is unaffected and still stands as a working, fully tested alternative. Completion, tracking and grade reporting behaviour for H5P activities carries over from Task 59's findings rather than being re-tested, since both draw on the same underlying activity type. Two items remain open and are not fixable from this account: the Teacher-side Attempts report gap and the stuck Gradebook, both already flagged for the people who can act on them.
