Design summary

Group 74 – Building an editor academy

Design principles

The design followed Nielsen's 10 usability heuristics, the OAPA Brand Book, the acceptance criteria and the accessibility report. The heuristics applied most were:

1. Visibility of system status: green completion indicators in the left panel and corrected locked/unlocked wording.
2. Recognition rather than recall: completed items stay marked, and Previous/Next buttons sit under the content.
3. Aesthetic and minimalist design: one filled button per view, simplified Participants page, and black-and-white colour with 1 px borders.
4. Consistency and standards: one tab row, sticky and at the same height on every course page.

Branding

The interface is black and white throughout, with one deliberate exception for completion states.

- **Colour:** inputs, selects and tick boxes use the 1 px black Brand Book border. The notification count is black and white, and Grades icons are grey instead of blue.
- **Completion green:** finished items show a green dot in the left panel, and the "Done" button has a green outline, tick and text. This is one colour variable, dark green in light mode and lighter green in dark mode, used nowhere else.
- **Buttons:** one filled button per view. "Done" is an outline so "Next" stays the single filled button, and on the teacher Participants page only "Enrol users" is filled.
- **Dark mode:** all colours come from light/dark variables, so icons follow text colour, left panel text is readable, the logo no longer shows a white box and course cards turn dark.
- **Logo:** 104 px wide, matching the approved mock-up. The Brand Book minimum is 220 px; this was approved by the UX designer and is controlled by one SCSS variable ($oapa-logo-width).

Navigation

Navigation was simplified around one tab row and one left panel.

- **Tab row:** Course, Participants, Quizzes, Assignments, Grades, Competencies. The Activities tab was replaced by Quizzes and Assignments, which open Moodle's own activity overview filtered to quizzes or assignments. On phones, extra tabs sit under "More".
- **Sticky tabs:** the tab row stays under the header when scrolling and sits at the same height on every course page.
- **Left panel:** starts closed on Participants, Quizzes, Assignments and Grades, and stays open on the course page and inside activities. The open button remains, and page content starts after it so it never covers the title.
- **Previous and Next:** normal buttons under the content instead of Moodle 5's fixed bottom bar. Previous is outlined on the left, Next is filled black on the right, and "Mark as done" sits beside Next. All three are 44 px tall and use the same font.
- **Locked and unlocked wording:** each module summary now says what unlocks it (for example, "Unlocked by passing the Module 1 Quiz with 80% or more"), so it is true in both states.

Learner and facilitator flows

Learners move through the course in order, and facilitators work from the tab row.

1. Module 1 is open from the start.
2. Each later module unlocks by passing the quiz at the end of the previous module with 80% or more.
3. The Final Assessment (Module 4) unlocks with full attendance at any 2 of the 3 workshops.
4. Learners mark items as done, see the green dot in the left panel, and move on with Previous and Next.

Facilitators use the Participants tab, the Quizzes tab (student attempts) and the Assignments tab (submissions to grade). The gate check confirmed these rules behave the same in the original course and its restored copy.

Participants experience

The Participants page uses Moodle's own table, search and download, rearranged to match the student and teacher mock-ups. What each person sees follows their Moodle role.

Accessibility commitments

The build commits to the following measured accessibility features:

- 44 px height on search, sort, pager and navigation buttons.

- A 2 px solid focus outline on inputs.
- Proper labels on the search and sort controls.
- 16 px side margins and no sideways scrolling at 390 px.
- Dark mode with icons that follow text colour, replacing the earlier black-on-black icons and greyed-out panel text.
- The green "Done" button pairs its colour with a tick and text, and locked modules carry lock icons.
