

Independent Template and Progression Cross-Test

Re-Test of Reshan's Final Reusable-Template POC (Post Week 3 Fixes)

Prepared by Shaikh Zarin Tasnim (Dev 2) - Team 74, OAPA Editor Academy

1. Purpose

This covers my independent re-test of Reshan's final reusable course template and sequential progression build, following his Week 3 fixes. The goal is to confirm the template still imports correctly, check learner progression across the module structure, and specifically re-test the 3 defects I originally reported in Task 20: the inverted restriction condition on Module 2's Knowledge Check, the broken navigation in Module 1's Knowledge Check, and the missing workshop-attendance gating on the Assignment.

2. Scope of Testing

The full template was tested end to end as a student, meaning Module 1, Module 2, Module 3 and the Assignment were all worked through in full, not just Module 1. Module 2 and Module 3 are built identically to Module 1, same quiz structure, same restriction pattern, same activity types, so rather than screenshot every module separately and repeat the same evidence three times, Module 1 is used as the representative example throughout this document. Progression, locking, and unlock conditions were confirmed working the same way across all three modules, not just the Module 1 to Module 2 transition.

3. Test Environment

This round of testing was done on our shared MoodleCloud site, in a freshly imported copy of the template called "Zarin Test Import 2". Reshan is currently unable to import his template into the real OAPA Academy course, so a real-course re-test was not possible this round. This is a separate environment limitation from the H5P invalidcontextid bug already reported, and is noted here as its own dependency.

A dedicated Student role account ("Student Test") was enrolled alongside the existing Teacher/Course Creator account, so the whole test could be run from an actual learner's point of view rather than from an editing account.

Fig 1. Student Test account enrolled with the Student role, alongside the Course Creator account.

4. Test Results

4.1 Template reuse and import

PASSED

The template imported cleanly into a new course ("Zarin Test Import 2") with the full module structure, activities and restrictions intact.

4.2 Progression locking across modules

PASSED

Before completing anything in Module 1, I tried to open Module 2 directly as the student. It correctly blocked access, showing the module as locked until the Module 1 workshop activity is marked complete.

Fig 2. Module 2 correctly locked before Module 1 is completed.

4.3 Knowledge Check question feedback

PASSED

Question 1 was answered correctly and scored 1/1 with the correct answer clearly highlighted.

Fig 3. Question 1 answered correctly, feedback shown clearly.

Question 2 was answered incorrectly on purpose, to check the feedback path. It correctly scored 0/1, marked the wrong choice, and offered both "Show solution" and "Try again". Clicking Show solution correctly revealed the right answer.

Fig 4. An intentionally wrong answer correctly triggers 0/1, with Show solution and Try again options.

Fig 5. Show solution correctly reveals the right answer.

4.4 Full quiz completion and previously reported navigation defect

PASSED / RESOLVED

The originally reported defect here was that navigation broke and got stuck at Question 3. This time, I completed all 4 questions of the Module 1 Reading Knowledge Check with no navigation issues at all, reaching a final result of 4/4 with the correct "good job, you understood the content!" overall feedback message. This defect appears resolved.

Fig 6. Module 1 Knowledge Check completed in full, 4/4, no navigation issues.

4.5 Completion tracking indicator

PASSED

After finishing Module 1 Reading, a green completion dot appeared next to it in the course sidebar, confirming the platform is tracking per-activity progress visually as the student moves through the course.

4.6 Restriction wording - previously reported defect

PASSED / RESOLVED

The originally reported defect here was that the restriction condition on Module 2's Knowledge Check was inverted, reading "is incomplete" instead of "is marked complete", which permanently blocked it. This time, the Module 2 Reading Knowledge Check correctly showed "Not available unless: The activity Module 2 Reading is marked complete", which is the correct condition. This defect appears resolved.

Fig 7. Module 2's restriction condition now reads correctly.

4.7 Partial score accuracy

PASSED

To check scoring accuracy under a realistic learner scenario, I intentionally answered the first 3 questions correctly, then answered the 4th incorrectly and clicked Finish straight away without retrying it. The result correctly came out to 3/4, with no credit given for the unretried wrong answer, and triggered an appropriate mid tier overall feedback message. This confirms scoring holds up correctly even when a learner doesn't retry every question. I later went back and completed this same quiz in full for a clean 100% record, which is what shows in the final Gradebook evidence in Section 5.

Fig 8. Scoring correctly reflects 3 correct answers out of 4 with no credit given for the unretried wrong one.

4.8 Assignment submission

PASSED

A test file was uploaded through the Assignment's submission form and submitted. The submission status correctly updated to "Submitted for grading", with the uploaded file and timestamp recorded accurately.

Fig 9. Uploading a test file to the Assignment submission form.

Fig 10. Submission correctly recorded as "Submitted for grading" with file and timestamp.

4.9 Relevant user roles

PASSED

Checked the Participants list for the course. Only two roles exist in this setup: Teacher (the Course Creator account) and Student (the Student Test account). Both were already covered by this testing, one as the editing/administrative view and one as the actual learner path, so this checklist item is satisfied with nothing left uncovered.

Fig 9. Only Teacher and Student roles exist in the course.

5. Learner Tracking and Reporting

PASSED

Checked the Grades area for the Student Test account. Every quiz correctly shows its recorded grade (all three Knowledge Checks show 100%, after I went back and completed each fully following the earlier partial-score test in 4.7). The Assignment and both Workshop submission/assessment grade items correctly show as (Empty) rather than a false zero or a placeholder score, since they haven't been graded by a teacher yet. The course total aggregates correctly across all graded items. This confirms the platform is tracking and reporting learner progress accurately per activity, not just showing a generic completed/not-completed flag.

Fig 10. Grades > User report for Student Test, showing accurate per-activity tracking.

6. Status of Previously Reported Defects

Defect	Status
Inverted restriction condition on Module 2 Knowledge Check	Resolved
Broken navigation in Module 1 Knowledge Check (stuck at Question 3)	Resolved
No workshop-attendance gating mechanism on the Assignment	Unresolved, confirmed not implemented

For the workshop-attendance gating defect, I checked what actually exists in each module's workshop activity. The Module 1, 2 and 3 workshops are standard Moodle Workshop modules, a peer submission and assessment tool with its own phases (Setup, Submission, Assessment, Grading evaluation, Closed). This is a different tool from an attendance tracker, and as of this test all three workshops are still sitting in Setup phase, with a message telling the student to wait until it's switched to the next phase, meaning they aren't even open for submission yet. Completion for the workshop activity is a manual self-click Done button, not tied to any actual submission, assessment, or attendance action.

So this isn't a partially built feature waiting on a small fix, there is currently nothing in the template that gates the Assignment or anything else based on workshop attendance. This should be treated as a feature still to be built for Sprint 2, not a bug to patch.

Fig 11. Module 1 workshop, still in Setup phase, with manual Done completion and no attendance-based gating.

7. Minor Observation (Not a Defect)

OBSERVATION

The Next, Previous and Finish navigation buttons inside the H5P Knowledge Check activities appear as blank blue buttons with no visible text label. Functionally they work correctly and I was able to navigate through every question using them, so this isn't scored as a defect, but it's worth flagging as a small usability polish item, since a learner encountering it for the first time may not immediately know what each button does.

8. Not Yet Tested

- Actual workshop submission and peer assessment behaviour, since the workshop activities are still in Setup phase and not yet open
- Direct verification on the real OAPA Academy course, since Reshan's template cannot currently be imported there
- Invalid/edge-case access attempts, such as reaching a locked activity by direct URL rather than through the course menu - planned for the Sprint 2 edge-case plan rather than this round

9. Summary

Both of the two testable defects from my original Task 20 report are now resolved: the Module 2 restriction condition reads correctly, and Module 1's Knowledge Check no longer gets stuck partway through. Template import/reuse, progression and locking across all three modules, question feedback, completion tracking, partial-score accuracy, assignment submission, user roles, and learner tracking/reporting all passed cleanly in this round of testing.

The workshop-attendance gating gap is now confirmed as not implemented at all, rather than just untested, since the workshop activities present are a peer submission/assessment tool still in Setup phase, unrelated to attendance gating. This should be scoped as a feature to build in Sprint 2, not a bug to patch. Real-course verification is still blocked separately, this time by the template not being importable into OAPA yet, distinct from the H5P platform bug reported earlier. These findings feed direc

Sprint 2 Technical Test and Edge-Case Plan

Based on the Independent Template and Progression Cross-Test findings

1. Purpose

This plan lays out the test cases for Sprint 2, built directly on what the Sprint 1 cross-test found. It covers progression, completion, locked/unlocked states, relevant roles, assessment access, workshop-related gating, learner tracking/reporting, and invalid or edge states. Each test case that cannot currently be run, either because the real OAPA course isn't accessible for this yet or because a feature doesn't exist yet to test, is marked clearly under Dependency/Notes rather than left silent.

2. Progression

ID	Test Case	Expected Result	Dependency / Notes
P1	Module locks correctly when its specific prerequisite activity is not yet marked complete	Module stays locked with the correct activity named in the restriction message	Confirmed working on MoodleCloud in Sprint 1
P2	Module unlocks immediately once its prerequisite is marked complete, without needing a page refresh or re-login	Module becomes accessible in the same session right after completion	New for Sprint 2
P3	Un-completing a prerequisite activity (if possible) re-locks the dependent module	Downstream module re-locks once its prerequisite is no longer marked complete	New for Sprint 2, checks the lock is live rather than one-time
P4	Progression behaves the same for a second, independent student account	No shared or leaked state between two different students' progress	New for Sprint 2
P5	Progression sequence verified directly on the real OAPA Academy course	Same locking behaviour confirmed on the live course, not just MoodleCloud	Blocked - template cannot currently be imported into the real OAPA course

3. Completion

ID	Test Case	Expected Result	Dependency / Notes
C1	Quiz activities mark complete automatically once a grade is received	Activity shows Done with no manual action needed	Confirmed working in Sprint 1
C2	Workshop activities mark complete only after genuine participation (submission and/or assessment), not just a manual click	Completion reflects actual participation, not a self-reported click	Blocked - workshop currently uses a manual Done button with no link to actual submission or assessment; needs to

			be built before this can be tested
C3	Assignment activity marks complete correctly once submitted and/or graded, matching its configured completion rule	Completion status matches whatever rule is configured (submission vs grading)	New for Sprint 2
C4	A learner who never attempts an activity correctly shows as not complete, with no false positive	Activity remains marked incomplete indefinitely if untouched	New for Sprint 2

4. Locked and Unlocked States

ID	Test Case	Expected Result	Dependency / Notes
L1	Locked activities correctly hide or restrict access through normal course navigation	Student cannot open a locked activity by clicking it in the course menu	Confirmed working in Sprint 1
L2	Locked activities are also blocked when accessed by direct URL, not just hidden in the menu	Direct URL access to a locked activity is refused or redirected, not just invisible in navigation	New for Sprint 2, important edge case to confirm the lock is enforced server-side
L3	Restriction messages always name the correct specific prerequisite activity, never a generic or wrong one	Message text matches the actual required activity in every module	Confirmed correct wording in Sprint 1 after Reshan's fix

5. Relevant User Roles

ID	Test Case	Expected Result	Dependency / Notes
R1	Student role cannot access Teacher-only pages (grading screens, settings, content bank) via direct URL	Access is refused or redirected for a Student account	New for Sprint 2
R2	Teacher/Course Creator role can access and use all grading, editing and restriction-configuration features	All Teacher-level functions work as expected	Confirmed working throughout Sprint 1 testing
R3	Check whether any additional roles exist on the real OAPA course beyond Teacher and Student (e.g. Non-editing Teacher, Manager)	Full list of in-use roles on the real course is known and accounted for	Blocked - only Teacher and Student exist on the shared MoodleCloud test site; the real course may differ and needs Site Administrator or Sam to confirm

6. Assessment Access

ID	Test Case	Expected Result	Dependency / Notes
A1	Assignment correctly tracks and displays late submissions	Late submission is flagged accurately with correct time-late shown	Confirmed working in Sprint 1
A2	Teacher can grade a submitted Assignment and the grade correctly appears in the learner's Gradebook view	Grade flows through from Teacher grading action to Student-visible Gradebook	New for Sprint 2, not yet tested since no submission has been graded yet
A3	Teacher can grade a Workshop submission through its assessment phase and the grade correctly appears in the Gradebook	Grade flows through correctly once the Workshop actually reaches its Assessment phase	Blocked - workshops are still in Setup phase and not yet open for submission or assessment
A4	Quiz retry/attempt limits, if configured, are enforced correctly	Student cannot exceed the configured number of attempts, if one is set	New for Sprint 2, depends on whether attempt limits are configured at all

7. Workshop-Related Gating

ID	Test Case	Expected Result	Dependency / Notes
W1	Workshop actually progresses through its phases (Setup, Submission, Assessment, Grading evaluation, Closed) as intended	Teacher can move the workshop through phases and students can interact appropriately at each stage	Blocked - workshops are currently stuck in Setup phase; this needs to be actioned before it can be tested
W2	Assignment or next module is gated behind workshop attendance/participation, per the client's confirmed 2-of-3 workshops requirement	Access to the gated activity is refused until the attendance condition is met	Blocked - no attendance-gating mechanism currently exists anywhere in the template; this is a feature to be built, not a bug to fix
W3	Once built, workshop-attendance gating correctly recognises partial attendance (e.g. 2 of 3 workshops) rather than requiring all or nothing	Gating logic matches the specific 2-of-3 requirement, not a stricter or looser rule	Blocked - depends on W2 being implemented first

8. Learner Tracking and Reporting

ID	Test Case	Expected Result	Dependency / Notes
T1	Gradebook accurately reflects each quiz score per student	Grades match actual quiz performance with no discrepancies	Confirmed working in Sprint 1

T2	Ungraded items (Assignment, Workshop) correctly show as empty rather than a false zero	No misleading zero scores appear before grading has actually happened	Confirmed working in Sprint 1
T3	Gradebook and reporting correctly distinguish between multiple students' individual progress at the same time	No mixing or bleed-through of one student's data into another's view	New for Sprint 2, needs at least two active student accounts tested in parallel
T4	H5P Attempts report correctly logs multiple attempts across multiple students	Full, accurate attempt history per student, matching what was seen for a single student in Sprint 1	New for Sprint 2

9. Invalid and Edge States

ID	Test Case	Expected Result	Dependency / Notes
E1	Submitting an Assignment file at or over the configured size/type limit	Submission is correctly rejected with a clear error, not silently accepted or broken	New for Sprint 2
E2	Finishing a Knowledge Check with every question left blank	Scored as 0 with appropriate lowest-tier feedback, not an error or blank result	New for Sprint 2
E3	Attempting to reach a locked activity by direct URL as a Student (see L2)	Access refused server-side, not just hidden from navigation	New for Sprint 2
E4	Behaviour when a prerequisite activity is deleted entirely after a module was already built and restricted against it	Restriction fails gracefully (e.g. defaults to open or shows a clear broken-restriction notice), not a hard error	New for Sprint 2, low priority edge case

10. Summary of What's Blocked

The following cannot be executed yet, and none of them are within the team's current access or control to resolve on their own:

- P5 - real OAPA course verification, since Reshan's template cannot currently be imported there
- C2, W1, W2, W3, A3 - anything depending on the Workshop actually being progressed past Setup phase, or on attendance-gating being built at all, since neither currently exists
- R3 - confirming the full set of roles on the real OAPA course, which needs Site Administrator or Sam to check

Note: Everything else in this plan can be run on the shared MoodleCloud environment without needing any further access.
