

OAPA Academy Moodle Gap Analysis & Updated Requirements

1. Key Findings

The current Academy Moodle already provides a usable base for asynchronous learning. Learners can navigate course modules, access Moodle Page content, complete quizzes, submit an assignment, view grades and see overall course progress.

The main gaps against the confirmed OAPA model are:

- **Sequential progression is not enforced:** all modules are currently accessible regardless of prior completion.
- **Live workshops are not represented:** no workshop sessions, scheduling, recordings or attendance functionality were found in the learner view.
- **Assessment gating is absent:** the final portfolio can be accessed before earlier learning or workshop requirements are completed.
- **Assessment workflow is only basic:** submission, deadlines and grades exist, but the required soft-deadline → feedback → revision → hard-deadline process is not demonstrated.
- **Some capabilities cannot be verified:** the team currently has learner-only Moodle access, so configuration, reporting, enrolment, templates and plugin capabilities require Developer confirmation.

The confirmed architecture remains Foundations → Intermediate → Capstone, with separate short-course support and a reusable Moodle structure.

2. Gap Analysis

Area	Current Academy Moodle	Status	Required Future State
Course navigation	Clear course index, modules, breadcrumbs and dashboard access	Existing	Retain
Course structure	Three learning modules plus a fourth portfolio/assessment module	Partial	Standardise as 3 learning modules + assessment phase
Learning resources	Moodle Pages, quizzes, assignment and embedded Padlet are used	Existing	Retain varied learning formats
Learner progress	Dashboard shows overall % completion	Existing / Partial	Ensure progress reflects required completion rules
Sequential progression	Later modules can be opened without completing earlier modules	Missing	Require completion of preceding module before progressing
Formative self-checks	Quizzes exist in Modules 1 and 2	Partial	Provide suitable self-checks throughout all standard modules
Peer discussion	Collaborative Padlet activity exists, but not consistently across modules	Partial	Provide discussion/peer-exchange area where required
Live workshops	No live-session component identified	Missing	Associate one live workshop with each learning module

Area	Current Academy Moodle	Status	Required Future State
Workshop scheduling	No workshop dates, links or recordings observed	Missing	Moodle-accessible sessions, calendar dates, timezone support and recordings
Workshop attendance	No attendance mechanism observed	Missing	Track attendance where it affects assessment eligibility
Assignment submission	Portfolio assignment supports submission and due date	Existing	Retain
Grades	Quizzes and portfolio appear in learner gradebook	Existing	Retain with appropriate release rules
Two-stage assessment	Only a conventional due-date workflow is visible	Missing/ Confirm	Support soft deadline, feedback, revision and hard deadline
Assessment eligibility	Final portfolio is immediately accessible	Missing	Restrict assessment until required eligibility conditions are met
Peer-review workflow	No structured submission → peer review → revision workflow observed	Confirm	Support confirmed peer-review requirements
Competencies	Moodle Competencies feature exists but none are linked to the course	Partial/ Confirm	Confirm intended programme-completion tracking method
Programme/category structure	Cannot be seen from learner access	Confirm	Foundations, Intermediate, Capstone

Area	Current Academy Moodle	Status	Required Future State
			and Short Courses structure
Reusable template	Cannot be inspected	Confirm	Reusable, duplicable course structure
Enrolment/reporting	Cannot be inspected	Confirm	Support required enrolment and learner/cohort/programme reporting

3. Updated Requirements

These consolidate the earlier requirements into a list that should now guide further work.

Structure & Navigation

R1. Programme structure

Moodle must support Foundations, Intermediate, Capstone and standalone/short-course offerings without major future reconfiguration.

R2. Standard course cycle

Standard Foundations/Intermediate courses must support:

Module 1 + Workshop → Module 2 + Workshop → Module 3 + Workshop → Assessment

R3. Learner navigation

Learners must be able to clearly identify available content, current progress and the next required stage.

Progression & Learning

R4. Sequential progression

Later modules must be restricted until the required completion conditions for earlier modules are satisfied.

R5. Asynchronous learning

Courses must support varied Moodle learning resources and activities, including formative self-checks and peer interaction.

H5P remains optional rather than a mandatory implementation technology.

Workshops

R6. Live workshops

Each learning module must support an associated live workshop accessible through Moodle, including scheduling, timezone-aware information and recording access where applicable.

R7. Attendance

Workshop attendance must be recordable where it contributes to learner progression or assessment eligibility.

Assessment

R8. Assessment eligibility

The final assessment must remain unavailable until the defined course participation/completion requirements are satisfied.

R9. Two-stage assessment

Required assessments must support:

Soft deadline → formative feedback → revision → hard deadline → summative result

Learners who do not use the soft deadline must still be able to submit by the hard deadline.

R10. Assessment management

Assessment functionality must support criteria/rubric marking, controlled grade release, learner extensions, submission status and completion tracking.

Broader Platform Requirements

R11. Peer review

The platform must support structured peer review, configurable reviewer identity and separate assessment of submission and review quality.

R12. Reporting

Progress must ultimately be reportable at learner, cohort and programme level and exportable in a common format.

R13. Reusability and accessibility

Courses must use a reusable, maintainable structure and function appropriately across desktop, tablet and mobile with appropriate accessibility support.

4. Developer Verification Handover

The following cannot be resolved using the current learner account:

ID	Verification Required
DV-01	What editable Moodle role/sandbox access will the team receive?
DV-02	What Moodle version, theme, plugins and permissions are available?
DV-03	Can Activity Completion and Restrict Access enforce module sequencing?
DV-04	How will workshop sessions, attendance, timezone handling and recordings be implemented?
DV-05	How will the soft/hard assessment workflow and controlled grade release be implemented?
DV-06	What peer-review/anonymity functionality is technically available?
DV-07	What enrolment, cohort and reporting functionality is available to staff?
DV-08	What mechanism will track completion across Foundations → Intermediate → Capstone?

These align with the technical questions already identified in the Sprint 2 open-question register, particularly Moodle permissions, platform configuration, assessment architecture, workshop implementation and H5P availability.
